BACKGROUND:

In 1938, the Santa Ana River broke free from its banks and flooded thousands of acres. As a result of this catastrophe, the construction of the Prado Dam was initiated. Completed in 1941, the Prado Dam increased protection from devastating floods to property downstream. In 1964, the Santa Ana River Mainstem Project (SARM) was proposed and construction began in 1989.

The SARM Project is designed to provide flood protection for residences and businesses in the Southern California communities of Orange, Riverside and San Bernardino counties. The proposed improvements to the system cover 75 miles, from the headwater of Santa Ana River east of the city of San Bernardino to the mouth of the river at the Pacific Ocean between the cities of Newport Beach and Huntington Beach.

The Reach 9, Phase 2A Embankment Project is one of the portions of the SARM project. This portion of the project is necessary to protect the lives and properties of individuals residing in the Green River Housing Estates, and the 91 Freeway. This project would provide approximately 4,500 feet of bank stabilization.

A Purchase Agreement has been negotiated with the property owner, the County of Riverside, at the appraised value of \$455,000 plus an additional \$10,000 for title and escrow fees.

The Purchase Agreement covers the fee title to Assessor's Parcel No. 101-140-005, Corona, California. The property contains approximately 25.86 acres or 1,126,462 sq. ft. and is unimproved/vacant land, situated in the bottom of the Santa Ana River.

This action is necessary to construct flood control improvements for the Santa Ana River Mainstem Project between Highway 71 and the Green River Golf Course, Corona, California.

FINANCIAL:

Sufficient funds were budgeted and are available in the Zone 2 fund for FY 2010-2011.
