BACKGROUND:

Summary

Departments throughout the County generate hazardous and non-hazardous waste requiring the need of a certified hazardous waste disposal company to provide the labor, materials, and equipment necessary to perform emergency and non-emergency transportation and disposal services. Countywide hazardous waste removal services to include the removal of anti-freeze, stream racks, clarified sludge, florescent light bulbs, contaminated oil, rags, waste paint, both recyclable and flammable, fuel filters, broken CRT glass, and solvents. The scope further required that the contractor be responsible for obtaining all necessary licenses and permits, notifications, shipping manifests, or reports in order to comply with any applicable international, federal, state, and local laws, codes, and regulations.

Impact on Citizens and Businesses

There is no negative impact on citizens or businesses in the County of Riverside.

Contract History and Price Reasonableness

County Purchasing released Request for Proposal (RFP) PUARC-1279, soliciting proposals for Hazardous Waste Removal Services on behalf of Riverside County. The RFP was sent to twenty-five (25) potential bidders and was advertised on the Purchasing web site. A total of four (4) bid responses were submitted in response to the RFP. The proposals were reviewed by the evaluation team consisting of County Purchasing, Fleet Services, Transportation Land Management Agency, and Waste Management. Each bid response was evaluated based on the criteria set forth in the RFP: overall response to the RFP requirements, bidders experience and ability, overall cost, references, pick-up at County locations, financials, clarification, exceptions, deviations and credentials, resumes, licenses, permits, and certifications. The County entered into best and final negotiations with three vendors, resulting in rates determined to be fair and reasonable to the County for Hazardous Waste Removal Services. Based on this analysis and an overall summation of the proposals submitted, it is the recommendation of the evaluation team to select the two, lowest responsive/responsible vendors; Environmental Logistics and Industrial Waste Utilization.

Since no sole provider offers the most economical rate for every service, Departments will compare the rate structure and utilize the vendor with the most reasonable rates and the available vendor as each need arises.

As an alternative to actual weighing, the weight of bulk shipments may be computed, provided that the specified gravity of the material is known and the volume actually picked up is determined. For example, 2,000 gallons of liquid with a specific gravity of 1.4 = calculated weight of 23,344 pounds. ($2,000 \times 1.4 \times 8.337$, where one gallon of water weighs 8.337 pounds). Specific gravity will be obtained from a waste profile sheet.

As an alternative to actual weighing, the weight of bulk shipments may be computed, provided that the specified gravity of the material is known and the volume actually picked up is determined. For example, 2,000 gallons of liquid with a specific gravity of 1.4 = calculated weight of 23,344 pounds. ($2,000 \times 1.4 \times 8.337$, where one gallon of water weighs 8.337 pounds). Specific gravity will be obtained from a waste profile sheet.
