EPD - 30 DAY BURROWING OWL SUR

RECOMMND

Pursuant to Objective 6 and Objective 7 of the Species Account for the Burrowing Owl included in the Western Riverside County Multiple Species Habitat Conservation Plan, within 30 days prior to the issuance of a grading permit, a pre-construction presence/absence survey for the burrowing owl shall be conducted by a qualified biologist and the results of this presence/absence survey shall be provided in writing to the Environmental Programs Department. If it is determined that the project site is occupied by the Burrowing Owl, take of "active" nests shall be avoided pursuant to the MSHCP and the Migratory Bird Treaty Act. However, when the Burrowing Owl is present, relocation outside of the nesting season (March 1 through August 31) by a qualified biologist shall be required. The County Biologist shall be consulted to determine appropriate type of relocation (active or passive) and translocation sites. Occupation of this species on the project site may result in the need to revise grading plans so that take of "active" nests is avoided or alternatively, a grading permit may be issued once the species has been actively relocated.

If the grading permit is not obtained within 30 days of the survey a new survey shall be required.

The clearing of upland habitat shall occur outside of the bird breeding season (February 1 to August 31), unless a qualified biologist demonstrates to the satisfaction of the County that all nesting is complete through completion of a Nesting Bird Clearance Survey. A Nesting Bird Clearance Survey report shall be submitted to the Riverside County Environmental Programs Division for review and approval prior to initiating clearing and grubbing during the breeding season. Clearing of upland vegetation outside of the bird breeding season will not require a nesting bird clearance survey.

Training shall include a description of species of concern, habitats, general provisions of the ESA and the MSHCP, and penalties associated with violating the ESA. The training shall also include a discussion of the general measures being implemented to conserve the species of concern. Prior to grading permit issuance a qualified biological monitor shall be contracted to provide biological monitoring of the grading and construction activities. A work plan shall be submitted to the EPD to review and approve, from the qualified biological monitor that may include but not be limited to Best Management Practices (BMPs), fencing of Open Space/Conserved Areas, and monitoring reports. The applicant must provide evidence that the qualified biologist has reviewed all construction plans and proposed activities to minimize impacts to any sensitive species and habitats. The biological monitor must maintain a copy of the grading plans and the grading permit at all times while on the project site. The EPD may require additional documentation in the form of biological reports and/or site visit(s) to confirm completion. Please contact EPD for further information. The document shall be submitted to the Riverside County Environmental Programs Division for final review and approval. The plan shall include financial assurances. The following language was taken directly from the General Biological Report. Mitigation for impacts to Riparian (vegetated) resources, with the exception of tamarisk scrub, will be at a 3:1 ratio for both temporary and permanent impacts. The Riverine resources (unvegetated streambed), disturbed wetland, and tamarisk scrub will be mitigated at a 1:1 ratio (Table 14). Approximately 17.2 acres of mitigation will occur on site per the Toscana Specific Plan Amendment No. 1 Mitigation Plan (HELIX 2014), with the remainder occurring through purchase of credits from an in-lieu fee program or mitigation bank, or other mitigation method as approved by the County and other resource agencies. Mitigation for unavoidable impacts to Riparian/Riverine areas will be biologically equivalent to resources being impacted by the proposed project. Mitigation measures to minimize impacts to waters include:

- Use of standard BMPs to minimize the impacts during construction (see also Section 5.6.1 above).
- Construction-related equipment will be stored in upland areas, outside of drainages except as required by project design (restoration, trash removal, etc.).
- Source control and treatment control BMPs will be implemented to minimize the potential contaminants that are generated during and after construction. Source control BMPs include landscape planning, roof runoff controls, trash storage areas, use of alternative building materials, and education of future tenants and residents. Treatment control BMPs include detention basins, vegetated swales (bio-swales), drain inlets, and vegetated buffers. Water

RECOMMND

The following condition has been modified from the original condition found on TR36593. The condition has been set to prior to first building permit issuance in accordance with the Donation Agreement executed between the applicant and the Regional Conservation Authority, and signed by Charles V. Landry on August 31st 2015.

Prior to the issuance of the first home building permit, the applicant shall provide an overlay of the Impact and Conservation Phasing Plan (See Figure 14, of the Multiple Species Habitat Conservation Plan Consistency Report, dated June 13, 2014) on the proposed grading plan. No grading shall be proposed beyond the limits of Phase 1, prior to meeting the conservation requirements of the subsequent phases. The conservation and financial requirements for Phase 1 as described below must be met prior to the issuance of a grading permit.

The Toscana MOU requires dedication of 510 acres (53.1 percent) of the 960 acres for the project as open space. Phase 1 community development will impact 260.7 acres or 57.9 percent of the total development anticipated by the MOU (See Figure 14, of the Multiple Species Habitat Conservation Plan Consistency Report, dated June 13, 2014). In order to remain consistent with required open space dedication, 57.9 percent of the 510 acres, or 295.3 acres, will need to be dedicated as part of Phase 1 community development. A total of 193.9 acres will be dedicated to the RCA prior to the issuance of the first building permit for Phase 1 community development, resulting in the need for 101.4 acres of additional conservation to bring Phase 1

of the project into rough step. These acres will be provided as part of Phase 2 dedications. In order to ensure that the 101.4 acres are conserved in the event that Phase 2 community development never moves forward, a monetary deposit in an amount to be determined by the RCA shall be placed in escrow by Forestar Toscana, LLC, for the benefit of the RCA until the dedication of property for open space conservation is brought into acreage dedication consistency with community development acreage. Upon dedication of at least 101.4 acres prior to Phase 2 community development, these funds will be released to Forestar Toscana, LLC. If the 101.4 acre dedication has not occurred within 5 years of the issuance of the Phase 2 grading permit, these funds shall be released to RCA for use in acquiring open space lands. This condition shall not be cleared until the RCA has accepted the lands and the monetary deposit has been placed in escrow. The RCA shall have final discretion as to whether they will accept lands encumbered by the easements listed below. Phase 1 Dedication Dedication of 193.9 acres of land in Phase 1 will include PAs 26B, 26C, 26F and 26G, in addition to the 70.5 acres of land already dedicated in PA 26A. The 101.4 acres required to bring the project back into rough step will be met through dedication of 261.6 acres subsequent to the initial dedications noted above. Certain easements will be included in the dedicated parcels, including:

- An existing 60-foot access easement over the existing dirt road known as El Hermano Road in PA 26B;
- A proposed 20-foot easement for the use and maintenance of the Regional Trail in PA 26A, 26B and 26C;

There will be approximately 9.7 acres of temporary impacts for construction of the channel, grade control structures, slopes along Temescal Canyon Road, and grading as part of the overall habitat restoration effort.

Phase 2 Dedication Dedication of 261.6 acres of open space land with Phase 2 community development will include PAs 26E and 26H and a portion of 26D. Phase 3 Dedication

TERRAMOR (SP 327)
Response Time Analysis
Riverside County, California
September 22, 2015

GENERAL DESCRIPTION

The proposed Terramor (SP 327) project is a planned community development that will be built in three phases. The project is located northeast of Temescal Canyon Road between Indian Truck Trail and Mayhew Road in Riverside County outside the city of Corona, California. The project is within a declared Very High Fire Hazard Severity Zone and is surrounded by undeveloped land on the north, east, and west (see Photo No. 1). The Riverside County Fire Department (RCFD) is the fire authority for the project.

Photo No. 1 – Aerial Photo of Project Area and Adjacent Undeveloped Land. Interstate 15 is in the Lower Left Corner of the Photo.

This report will only address Phase 1 of the proposed project which consists of the development of 602 single family homes and a recreation center on approximately one-hundred and forty (140) acres of residential use. Another sixty-seven (67) acres is designated as parks or other infrastructure and one hundred and ninety three (193) acres is designated as open space. Phase 1 includes Planning Areas (PA) 1, 2, 3, 4, 5, 15, 18, 19, and 25, 26A, 26B a portion of 26C, portion of 26E, and 26F as seen on the Conceptual Land Use Plan (see Figure 1). A Fire Protection Plan (FPP) was approved for Phase One of the project and FPP's are being developed for Phases Two and Three.

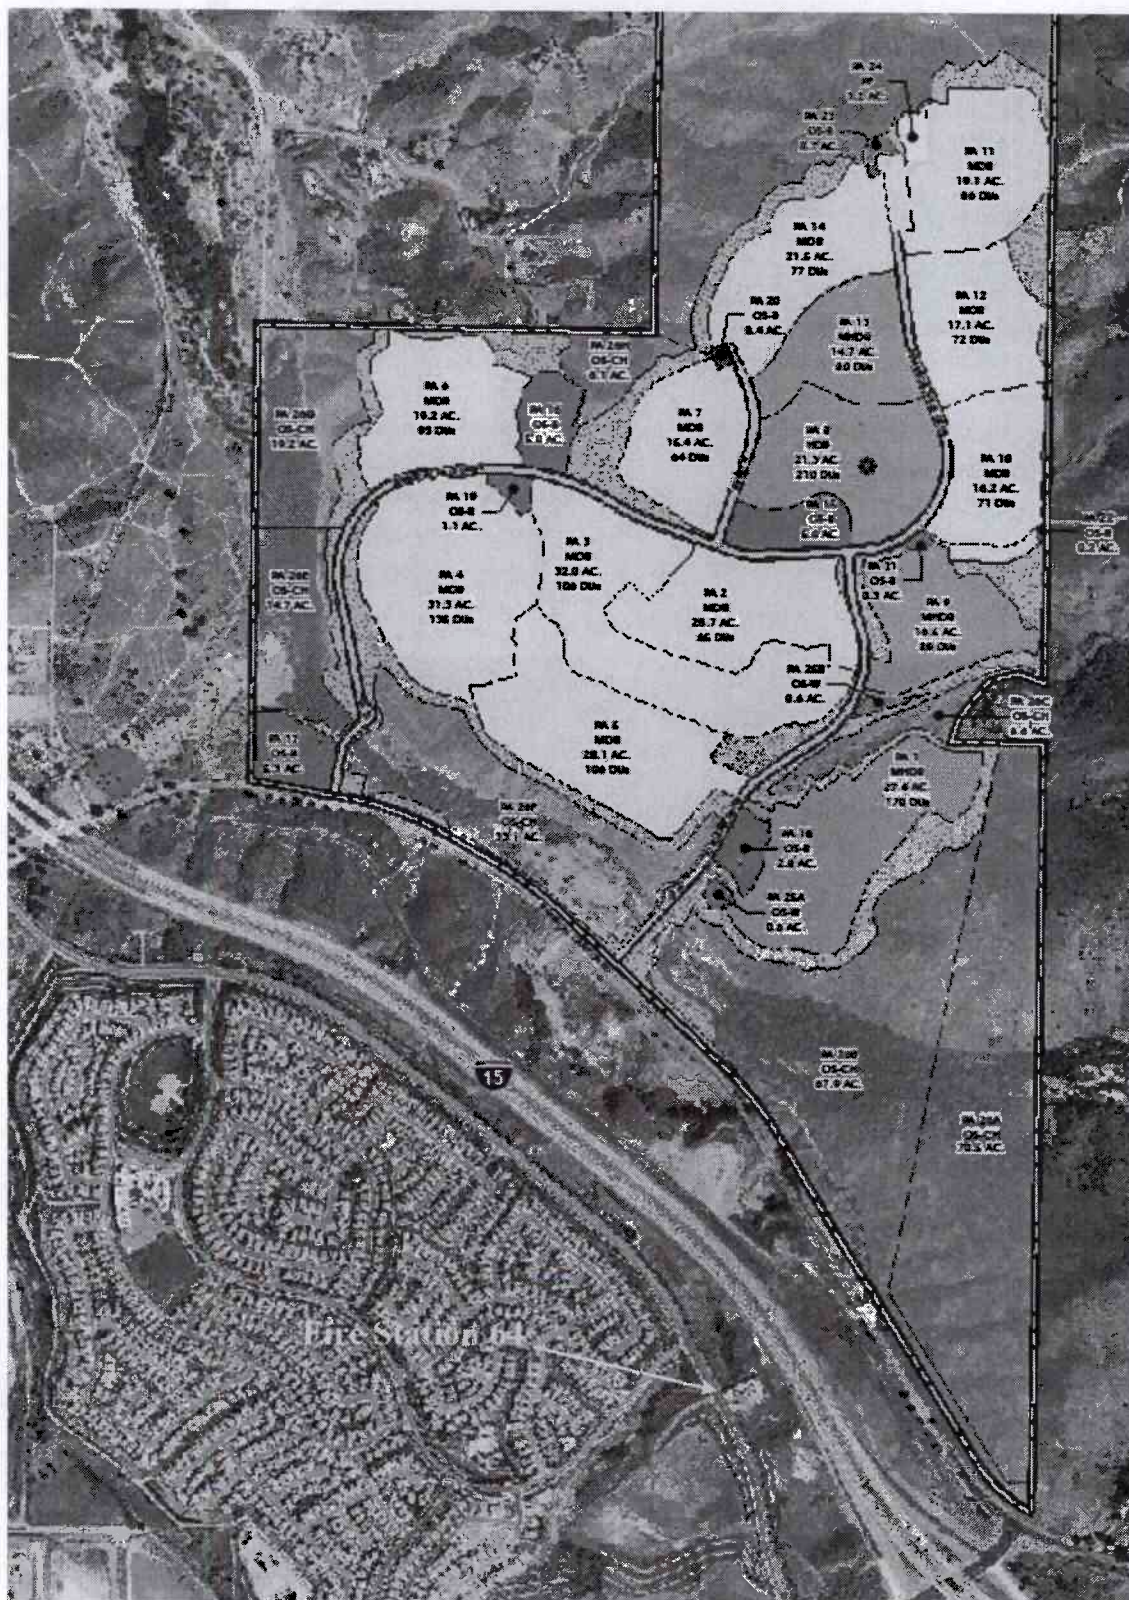

Figure 1

FIRE DEPARTMENT RESPONSE TIMES

The Terramor (SP 327) project is within the response area of the Riverside County Fire Department. Main ingress and egress for the Terramor (SP 327) development will be from Temescal Canyon Road. The closest fire engine to the proposed development is located at RCFD Fire Station #64 at 25310 Campbell Ranch Road; approximately 2.5 miles from the furthest planned residences in Phase One (see Figure 1). Using NFPA Table C.11 (b), this gives a travel time of approximately 5 minutes to the furthest residence in Phase One. Google Earth and Google Maps also project similar travel times.

In analyzing response times only the closest engine is considered. However, for information purposes, in the event that the engine in Station #64 is unavailable due to another call, the second closest engine is located at RCFD Fire Station #15, at 20320 Temescal Canyon Road, approximately 7.2 miles from the furthest planned residences in Phase 1 and 13 minutes travel time using NFPA Table C.11 (b). Google Earth and Google Maps also project similar travel times.

NFPA Standard 1710 is eight (8) minutes for a full response from the closest engine. In 2012 the average response time for the Riverside County Fire Department was 8.3 minutes. However at a recent community meeting Fire Captain Jim Brown of Station #64 reported that they averaged a 5.3-minute response time out of the station from Jan 2015 through Aug 2015. This was confirmed in a telephone conversation with Station #64 Engineer Kevin Hanson. This concurs with the projected times using NFPA Table C.11 (b), Google Earth, and Google Maps and within the NFPA Standard 1710 for the area.

It should also be noted that additional agencies such as the USDA-Forest Service and nearby fire departments would likely respond equipment under mutual aid agreements but may arrive after the first RCFD engines were on-scene.

PROPOSED CHANGES

The Terramor (SP 327) development will be a gated community with both community entrances equipped with automatic gates and gate attendants, although attendants may not be present at all times. As stated in the approved FPP for Phase One: *Any gates to be installed shall meet RCFD Standards and shall be approved by the RCFD prior to fabrication and installation. A Knox override key switch or similar device acceptable to the RCFD must be installed outside the gate in an approved, readily visible, and unobstructed location at or near the gate to provide emergency access. Gates accessing more than four residences or residential lots, or gates accessing hazardous, institutional, educational or assembly occupancy group structures, shall also be equipped with approved emergency traffic control-activating strobe light sensor(s), or other devices approved by the Fire Chief, which will activate the gate on the approach of emergency apparatus with a battery back-up or manual mechanical disconnect in case of power failure.*

The projected response times in the approved FPP for Phase One took into account the entrance gates (see previous section on Fire Department Response Times) which are marked in red on Figure 2. Additional neighborhood gates have been proposed to partition the development into various neighborhoods since the approval of the FPP for Phase One. Figure 2 shows the locations of these proposed gates as green dots. Two of the proposed new gates only affect Phases Two and Three and therefore will be addressed in the future FPP's for these phases of the development.

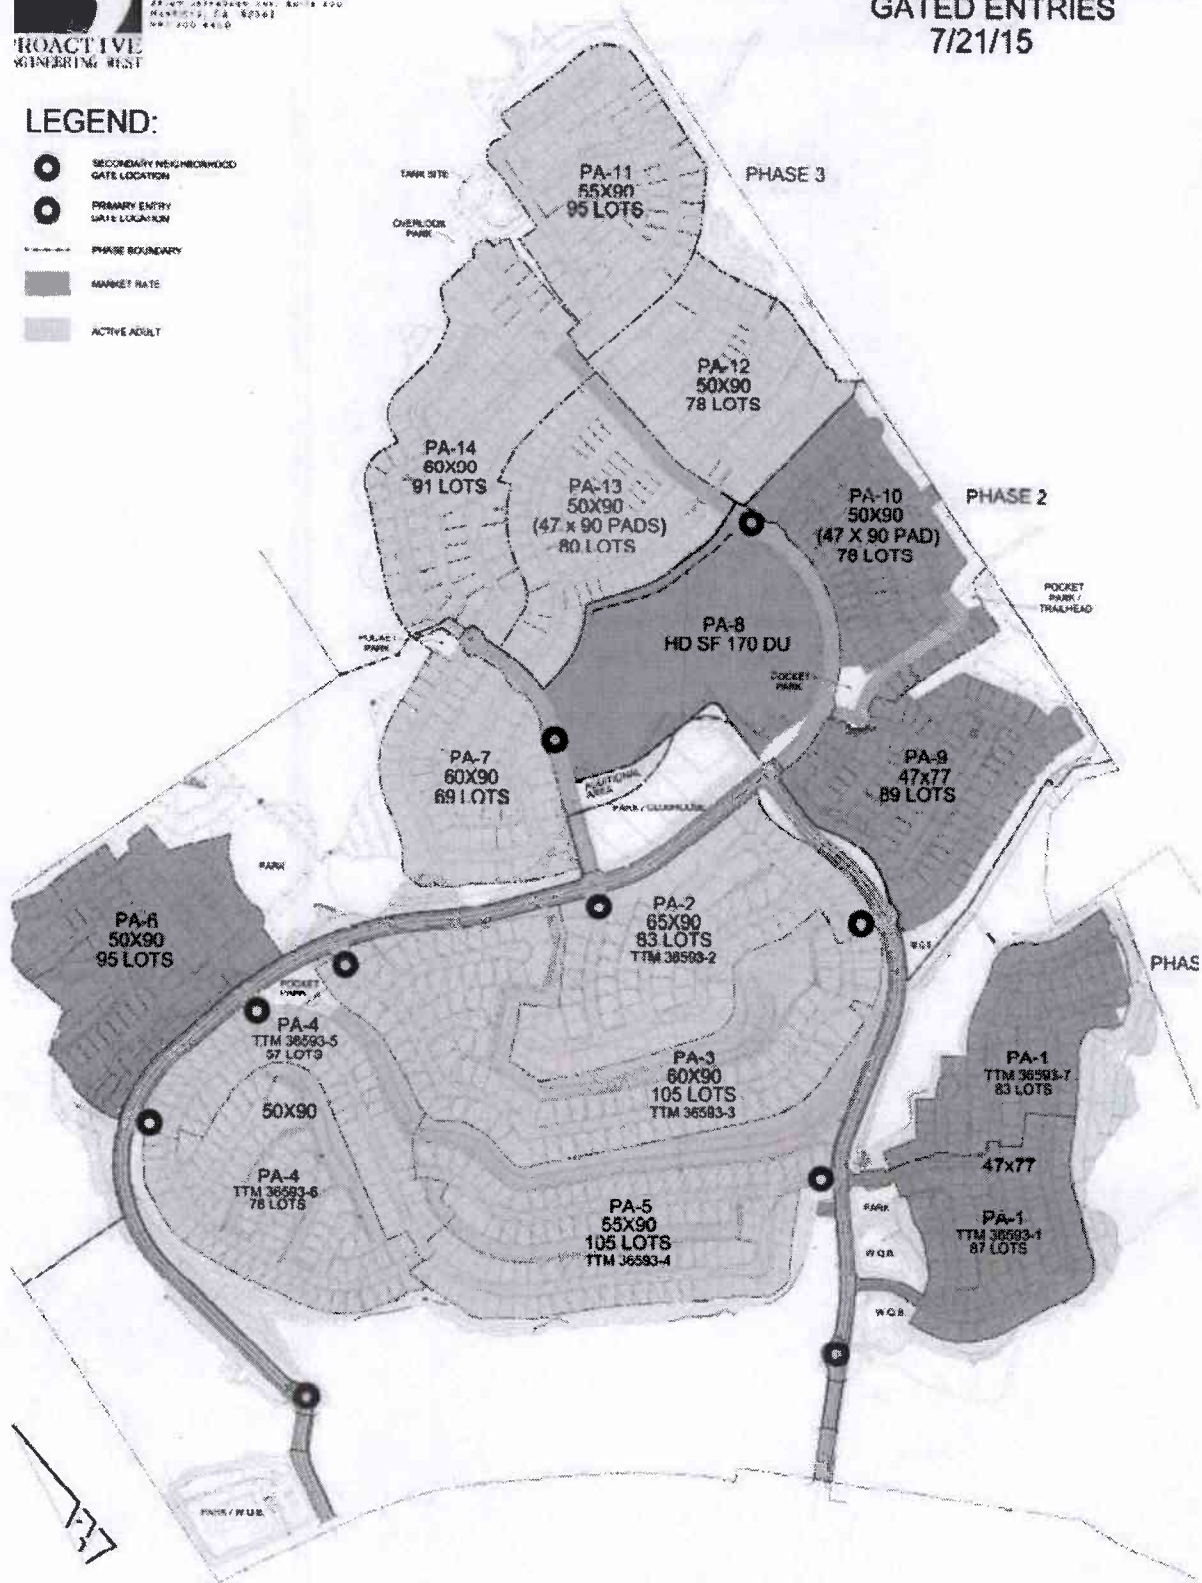

Figure 2

On the average it takes 10 – 15 seconds for an automatic gate to open depending on the type of unit. If a gate has to be opened manually this could add another 15 seconds. In Phase One, only Planning Areas 2 - 5 are affected by the proposed new neighborhood gates. As can be seen in Figure 2, to reach any housing unit in PA 2 -5 two gates would be required; the community entrance gate and a neighborhood gate. Under the worst case scenario this would add 30 seconds to the response time stated in the approved FPP. Using the previously stated response times, which include passing through the entrance gate, the response time to the furthest housing units in Phase One, would increase from 5.3 minutes to 5.8 minutes. This is within the NFPA Standard 1710 for response times for the area; falls within the average response time for the RCFD; and corresponds close to the average response time for the closest engine at Station #64.

CONCLUSIONS

The addition of neighborhood gates within the Terramor (SP 327) development will not adversely affect the response times of emergency units responding to housing units within Planning Areas 2 -5 in Phase One of the development. NFPA Standard 1710 is an eight (8) minute response time; RCFD average is 8.3; and Station #64 (the closest engine) is 5.3 minutes. Additional proposed neighborhood gates add, at the most, 30 seconds to the response time which is still within the accepted standard.

Although additional proposed neighborhood gates for Phases 2 and 3 will be addressed in the Fire Protection Plan for these phases it appears at this time that these two gates will not significantly affect the response times for those areas. The proposed additional gates also do not affect the response times of fire engines responding to a fire in the urban-wildland interface in Phase One of the development. The proposed gates are interior gates and do not impede traffic on the main access roads or the secondary roads leading to the perimeter of the development. Any changes or additions to the approved Fire Protection Plan for Phase One therefore do not appear to be warranted at this time.
