Generally, the level of risk takes into account two major components; the default or credit risk and the market risk associates with the probability that the security will be affected by market changes in short-term interest rates. Risk ranking have been assigned with 1.0 being the lowest level of risk and 2.0 being the highest.

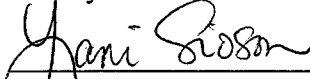

- 1.0 U.S. and Federal Agency Securities directly backed and fully guaranteed by the United States Treasury are considered the safest.
- 1.1 Next in order of safety are those Federal Agency securities that have the ability to borrow from the United States Treasury.
- 1.2 The third category are those securities that have some form of government collateral backing (i.e. Investment Agreements, Repurchase Agreements and federally chartered agencies (i.e. Federal Farm Credit).
- 1.3 The fourth category evaluates the credit worthiness, capitalization and the time duration of the investment. Money markets, both taxable and tax-exempt, fall under this category.
- 1.4 The fifth category constitutes those that have state and local government collateral backing.
- 2.0 The sixth category reflects the risks associates with the Executive Office having loaned securities to a brokerage firm in meeting temporary cash flow needs by way of Reverse-Repurchase Agreements and the fact that the County could be subject to margin calls should the collateral have a reduced market value. Margin calls can affect the liquidity position of the portfolio in meeting current expenditure requirements.
