Hole Depth Max	14 ft
Stemming:	5
Ex. Pounds per Foot:	3.55 lbs/ft
Ex. Specific Gravity:	0.85
OSM Safe Distance:	375 ft
Predicted PPV:	0.02 ips
Pounds per Delay: Max	39 lbs
Nearest Structure: Home	1900 ft
Scaled Distance:	304.24 ft
Actual PPV:	0.02 ips
Sub Drill:	2 ft
Total # Explosives per hole max	39 lbs
# of Holes	1 ea
powder factor Max	8.38 lbs/cy
cubic yards	4.67 cy
Cubic Yards per Ft Drilled:	0.33 yd^3
Drill Footage	16 ft
Max Predicted PPV 100% tile	0.06
50% tile	0.02

BLASTING SAFETY PLAN

BLAST SITE STANDARD OPERATING PROCEDURES

I. Pre-shift Team Meeting

A pre-shift meeting will be held by blasting crews each shift. The pre-shift meeting shall include the following:

- ✓ Work locations
- ✓ Unique or continuing hazards
- ✓ Equipment/PPE needed for assigned work; reflective clothing, hard hat, safety glasses, gloves, steel toe shoes, fall protection, warning signs, remote, small tools, etc.
- ✓ Hole specific loading instructions for a pattern (Water, hardness, voids, decking, product, etc)
- ✓ Identification of parties for communication and unique work being done in areas adjacent to the blast site
- ✓ Assign blocking locations
- ✓ The anticipated time of the blast
- ✓ Other pertinent information

II. Pre-loading Area Inspection

The purpose of this section is to insure that the risks associated with the blast are identified and controlled.

- Blast area inspections shall be performed before loading starts.
- The Blaster in Charge will verify that the blast plan map accurately represent the blast pattern in the field (i.e. number of holes, hole locations, problem holes).
- Sites will verify that all potentially affected persons have been informed of blast.
- During the inspection blast site access and egress routes shall be evaluated and appropriate actions taken.
- The Blaster in Charge will determine the boundaries of the blast area. The following items shall be considered when determining the boundaries of the blast area:
 - ✓ Concussion
 - ✓ Fly rock
 - ✓ Fumes, ventilation and prevailing wind conditions
 - ✓ Air blast
 - ✓ Subsidence
 - ✓ Adjacent infrastructure
 - ✓ Equipment locations including maintenance activities
 - ✓ Noise and vibration
 - ✓ Geological features
 - ✓ Adjacent underground or surface workings
 - ✓ Hazards associated with the loading pattern

- Holes are marked with flag or stake identifying hole ID & Depth
- Holes not intended to be loaded will be labeled with "do not load"
- Any unlabeled holes that are discovered will be properly identified through consultation with the map and the Blaster in Charge.
- Questions or concerns that arise from the area inspection will be resolved through consultation with the Blaster in Charge before loading starts.

III. Explosive Storage and Transportation

The purpose of this section is to insure that explosives are handled and transported safely and in accordance with regulations.

- A person or persons will be assigned responsibility for managing the magazines.
- All outdoor magazines will be built to the BATF standards and sited to the American table of Distances.
- All magazines will be:
 1. Properly grounded.
 2. Constructed outside the corridors of power transmission lines.
 3. Properly signed with; "No Smoking", "Explosives Stored Here" and "Authorized Personnel Only".
- The location of all fire extinguishers will be clearly marked.
- All magazines will contain a book or similar method for the recording of all explosives movements in and out of the magazine and current inventories. If the records are kept in a central office each magazine will have its own section to record movement of product from that magazine.
- If materials other than explosives are being stored within the magazines they will be segregated from the explosive materials.
- All magazines will contain an updated copy of authorization, permits or licenses.
- The locks on magazines will be rotated per regulatory standards.
- Bills of Lading (BOL's) and packing lists shall be kept in a secure location for the specified minimum period of 5 yrs.
- All explosives, detonators, and accessories will be transported in accordance with statutory regulations.

IV. Priming

The purpose of this section is to insure that detonators and primers are handled safely and usage matches blast design. This will allow for proper accounting of detonators and primers prior to loading.

- All holes will be taped for depth and water level before priming. Blaster in Charge will be notified of any significant variance from expected measurements before the hole is primed.
- The blast site will be secured with yellow, green, or orange (jobsite specific) cones and warning signs will be used to block all accesses to the blast pattern to be primed and loaded.
- Explosives products will be laid out in a careful, efficient and well-coordinated manner (between holes, on the outside of the cuttings pile and out of the flow of traffic).
- Primers will be assembled only at the hole collar and will immediately be carefully lowered into the hole.

- All detonators will be fully enclosed within the booster according to the manufacturer's recommended procedures.
- A standard weight or anchor system should be used to secure down lines into position at the surface.
- An inventory of boosters and detonators will be done in the field, at each blast pattern and verified against the blast plan map. The Blaster in Charge will cross check the detonator inventory after the products are laid out to insure that the amount used matches the number of holes on the pattern.

V. Loading

The purpose of this section is to insure that holes are loaded per the blast design and that problems that arise during loading are dealt with appropriately.

- All holes will be re-taped for depth and water level before loading.
- The loading trucks will wait to load holes until they have enough holes primed to empty a truck or continuously load.
- The powder column rise of each hole will be continuously monitored until the stem height is reached or the appropriate weight of explosives is loaded. Any deviation from expected column rise over a set amount during loading will be immediately brought to the attention of the Blaster in Charge.
- Loading personnel will know the upper weight limit of product to be loaded and the planned stemming height of each hole.
- Interruptions in the loading process will be documented and communicated to the Blaster in Charge.
- All loading trucks will be parked off the pattern after loading is finished.
- Explosives transport trucks will not be left unlocked with explosives on board. They will be relocked immediately after unloading.
- Weather forecasts will be evaluated prior to each blast for chances of thunderstorms and lightning strikes. Continuous lightning detection will be done through use of a Strike Alert personal lighting detector carried by the blasting crew. The detector can alert blasting personnel of lightning strikes up to 40 miles away, and if necessary allow for evacuation of personnel from the blast area.
 - <http://www.blasterstool.com/strikealert-personallightningdetector.aspx>

VI. Stemming

The purpose of this section is to insure that stemming activities are done in such a way to eliminate cut down lines, "bridge overs" and help identify problem holes.

- The recommended stemming material and equipment is:
 - ✓ Clean crushed gravel as specified in the definition of stemming
 - ✓ Side-dump articulating loader
- The stemming process will not begin until after all the holes are primed and the loading is far enough ahead so that stemming activities will not interfere with the loading process.
- Stemming material shall be strategically placed at the blast site using a spotter.
- Detonator down lines will be positioned to eliminate damage.
- Down lines will be secured prior to stemming.

- Stemming material shall be carefully poured down blast holes to eliminate down line damage and control dust.
- Stemming operators should safeguard against oversized material being accidentally introduced down blast holes.
- Stemming operators must be properly trained in procedures used in case of a lost, cut or damaged down line.
- Stemming operators shall inform the Blaster in Charge of any problem holes.
- The Blaster in Charge must address and ensure that any and all "problem holes" are reported on the Blast Summary paperwork. Unloaded or "bad" hole information should be included as well.

VII. Tie-in

The purpose of this section is to ensure detonation of all holes in the blast pattern and proper timing of all holes.

- The Blaster in Charge shall generate a tie-in sequence diagram of every blast hole.
- This diagram will be included with the other blasting documentation required from the daily blasting activities.
- The Blaster in Charge shall review the sequence diagram with personnel doing the tie-in.
- Tie-in of pattern shall begin only if it will not interfere with other blasting unit processes or cause distractions to those tying in.
- For pre-splits or secondary blasting, after tie-in is complete, the pattern must be independently checked by two individuals, verifying completeness and matching to the blast map. Both should initial the check on the Blast Summary.
- A shift supervisor and/or shot blockers should be notified at least 30 minutes prior to completing tie-in so that shot blockers can prepare for the pre-blast meeting.

VIII. Pre-blast Meeting

The purpose of this section is to insure that all personnel involved in the clearing and initiation of a blast are clear about their assignments, properly equipped and know their responsibilities.

- The pre-blast meeting will include all blockers and sweepers and will be face-to-face.
- The Blaster in Charge will conduct the meeting.
- Each blocker and sweeper will receive their assignment in the meeting and the Blaster in Charge will ask them to repeat back their assignment and their responsibilities.
- All blockers will remain at the meeting until the meeting is over.
- Cones will be provided for each blocking position to block the road.
- All vehicles used for clearing and blocking will be equipped with a functional two way radio and functioning beacons and /or flashers.
- If vehicles are not used for blocking, a person with a flag, radio and yellow cones is acceptable.

IX. Securing and Holding Blocking Position

The purpose of this section is to insure that blocking positions are never compromised and clear, concise communication is maintained between the Blaster in Charge and each blocker.

Securing and holding of blocking positions will be directed by the Blaster in Charge.

Blockers will:

- ✓ Will be trained and the trained to necessary standards and the training documented
- ✓ Drive to assigned blocking location
- ✓ Turn vehicles or equipment used for blocking perpendicular to the flow of traffic (if vehicles are used).
- ✓ Use cones to block the road.
- ✓ Have contact with the Blaster in Charge via radio.
- ✓ Communicate to the Blaster in Charge, in detail, actions taken to clear the area and the blocking position is secure.
- ✓ Not permit entry to the secured area by anyone without permission of the Blaster in Charge

The Blaster in Charge will:

- ✓ Prior to pre-blast meeting determine blocking locations and place a cone at each location. This is to mark the blocking location NOT to block the road.
- ✓ Maintain a blocker check list and use it to verify completion of assignments.
- ✓ Do a redundant check with each blocker prior to the last blast warning.
- ✓ Instruct each blocker to hold their position if a delay occurs.
- ✓ At the end of the delay, check with each blocker before continuing with the last blast warning.

X. Clearing Blast Area

The purpose of this section is to insure that the blast is properly cleared and that all affected personnel are notified.

- Clearing for a shot will be directed / supervised by a Blaster in Charge.
- Clearing an area for a blast will begin at the blast site and proceed outward.
- All affected personnel will be notified prior to clearing to allow for orderly preparation and evacuation of the blast area.
- All affected equipment will be positioned or relocated to a safe position to minimize damage from fly rock or blast vibration.
- All equipment in the blast area will be physically cleared of personnel.
- During clearing, all entries previously cleared will be guarded to prevent re-entry into the cleared area ("back doors" will be held).
- Those clearing for a shot ("sweeper") must be approved by the Blaster in Charge.
- Blast zones should be cleared to a 1,000' radius minimum or great if the blaster in charge feels it to be necessary, free of all personnel and non-essential equipment.

XI. Blast Initiation

The purpose of this section is to ensure the blast area is clear and that all blocking positions are secure.

- Blast initiation will be directed / supervised by a Blaster in Charge

- Blast initiation will take place from a location safe from hazards resulting from blasting.
- The blast initiation location will be a safe distance from electrical interference (e.g. power lines, power cables, radios)
- The firing / initiation system will be enabled AFTER all clearing and blocking activities are finalized.
- The firing / initiation system will be in the possession of the blasters and under control of the Blaster in Charge at all times.
- The firing / initiation system will be connected by the Blaster in Charge or a person under his/her **direct control**.
- Two-way radio communication between the Blaster in Charge and all blockers will be maintained throughout the clearing, blocking and initiation processes.
- Blasting personnel will be competent in safe practices in the event that a blast fails to detonate.

XII. Radio Procedures & Countdown

- Blaster in charge posts security at necessary locations with Radio Communications
- Blaster Announces "Attention all personnel on PROJECT NAME, This is the blaster in charge. We are five minutes from the blast. All personnel maintain radio silence until the all clear signal following the blast has been sounded or an actual emergency exists and announce CEASE FIRE."
- Sound Five Minute wail Siren (keyed over microphone) & wait 3 minutes.
- Blaster Announces "2 minutes to Blast."
- Sound 2 Minute wail Siren (keyed over microphone) & wait 1 minute
- Blaster Announces "1 minute to Blast."
- Blaster Checks with all security positions to verify "All Clear" from each position & sound yelp siren (keyed over microphone).
- Blaster Announces "Attention PROJECT NAME personnel, we will be blasting in 10,9,8,7,6...(5 Second Pause in case of a Cease Fire).. Fire in the Hole!"
- Fire Shot
- Blaster Announces "All personnel remain at your positions until the all clear has been sounded."
- Inspect Shot for misfires and ensure all explosive materials have detonated.
- Blaster Announces "All Clear, All Clear."

XIII. Post Blast Inspection

The purpose of this section is to ensure that the blast holes have been detonated and the area is safe for reentry.

- A post-blast inspection will be performed by the Blaster in Charge once all dust, and dangerous fumes are no longer present.
- All blockers will remain in place during the post-blast inspection.
- Cones will demarcate the blast site until the post-blast inspection is complete and the Blaster in Charge gives the "all clear".

XIV. Blast Monitoring

The purpose of this section is to ensure that blast vibration data is recorded and utilized to manage slope stability.

- Blasts will be viewed and videoed from above if possible.

- A blast vibration monitoring system utilizing seismographs shall be instituted and actively managed. At least one seismograph will be deployed for each blast event, typically at the nearest adjacent structure.

XV. Misfired Hole Procedure

The purpose of this section is to insure that personnel involved in the blasting process are trained to recognize a potential misfire and are familiar with the SOP's for dealing with a potential misfire.

- All blasting personnel will:
 - ✓ Know the definition of a misfire
 - ✓ Be familiar with the blasting products used
 - ✓ Be familiar with what a misfire looks like and how to determine if there is a misfire.
 - ✓ Be familiar with the waiting period for a suspected misfire.
- There will be systems in place to:
 - ✓ Document misfires and handle them properly
 - ✓ Mark misfires in the field in an easily recognized manner
 - ✓ Follow up on and investigate if there was a misfire and determine the cause
 - ✓ Develop action plans to deal with misfires including SOPs
 - ✓ Enter the misfire into shovel/loader computer GPS systems if used to alert shovel and loader operators of the location
 - ✓ Familiarize pit personnel with the SOPs for handling a misfire
- A safety session on unfired powder column and blasting component recognition will be part of the pre blast safety meeting.

XVI. Sleeping / Guarding a Shot

The purpose of this section is to ensure shots slept overnight are safely managed.

- There will be an SOP for sleeping a shot.
- Shots will be slept overnight only in extraordinary circumstance.
- Shots slept overnight will be guarded or barricaded to prevent unauthorized access to the blast pattern.
- In the event of an approaching electrical storm, The Blaster in Charge or a designated shift supervisor will be responsible for clearing the blast area in the same manner as clearing for a shot.
- The Blaster in Charge or a designated shift supervisor will determine when activities may resume within the blast area.

XVII. Record Keeping

The purpose of this section is to ensure accurate records are kept as required by regulation.

- Daily Magazine inventories transactions shall be recorded for all blasting products checked out and unused product checked back in (verification required).
- Magazine physical inventories shall be checked for accuracy at least once per month and verified by supervision. Any discrepancy shall be immediately investigated.

- A yearly close out and starting inventory will be taken and maintained as part of the permanent records required by the regulatory agencies (verification required).
- Each site shall maintain daily blasting documentation (Blast Summaries) that contain information such as load amounts, blast diagrams, timing configurations, "bad" or "problem" holes, and other "out of the ordinary" or pertinent information.
- Licensees and permit holders must keep all records pertaining to explosives, in permanent form, for not less than 5 years.
- License and permit documentation shall be kept current and displayed in conspicuous areas.
- Records of Employee Possessors and Responsible Persons must also be maintained and updated as needed.

Appendix A – Transportation Standard Operating Procedures

Explosives Vehicle Drivers shall ensure:

- Proper placards visible in all four directions.
- Day boxes that are securely fastened to the vehicle or confined within the vehicle body to prevent spillage.
- Day boxes with explosives shall be locked in transit and on the pattern when product is not being unloaded.
- Vehicle loads that are within the rated vehicle carrying capacity.
- Non-sparking materials for container lining and fasteners.
- No other materials transported with explosives.
- Detonators transported on the same vehicle as explosives shall be placed in IME standard boxes.
- Vehicles will be equipped with two 20 pound multipurpose dry fire extinguishers.
- The volume and quantity of explosives shall not exceed the limits established by regulatory authorities.
- Means to control of inventory of explosives will be established.
- All working magazine areas shall be made secure with either a lockable gate and fence or lockable storage box for explosives, which will meet the requirements of the applicable agency.
- All magazines shall be designed to prevent vehicle impact to the magazine.
- The magazines shall be located in a proper manner to control surface drainage.
- Explosives refuse (empty boxes) shall be inspected, broken down and disposed of properly.

Appendix B – Competency and Training

All employees who participate in drilling, sampling, blasting or support blasting activities shall be trained to effectively perform their duties. This training shall be documented.

Sites will develop a list of required skills and evaluate individuals to verify they are competent prior to participating in or supporting blasting activities. The skills shall include:

- Staking drill holes
- Duties of Responsible FCX Employee
- Duties of a lead blaster
- Duties of a sampler

- Conducting a pre-loading site inspection
- The identification of unique hazards for blast patterns
- Hole loading practices for routine and non-routine holes
- Magazine inventory control
- Safe transport of explosives
- Field inventory control
- Inventory reconciliation
- Guarding a shot overnight
- Establishing evacuation areas for blocking
- Effective blocking for a blast
- Post blast inspections
- Managing misfires or discovered explosives

BLASTING RADIO PROCEDURES

After tying in shot and evacuating area:

- Blaster distributes handheld radios to guards and performs radio checks.
- Blaster in Charge assigns blocking positions and posts guards at blocking locations and performs radio checks.
- Blaster Announces "Attention all personnel on **"PROJECT NAME"**, This is the blaster in charge. We are five minutes from the blast. All personnel maintain radio silence until the all clear signal following the blast has been sounded or an actual emergency exists and announce CEASE FIRE."
- Sound Five Minute Siren & wait 3 minutes. **(Keyed microphone so siren is audible across radio frequency.)**
- Blaster Announces "2 minutes to Blast."
- Sound 2 Minute Siren & wait 1 minute **(keyed microphone so siren is audible across radio frequency.)**
- Blaster Announces "1 minute to Blast."
- Blaster Checks with all security positions to verify "All Clear" from each position & sound blast siren. **(keyed microphone so siren is audible across radio frequency.)**
- Blaster Announces "Attention PROJECT NAME personnel, we will be blasting in 10,9,8,7,6,5...(Pause for 4 seconds for Potential calls for Cease Fire...) Fire in the Hole!"
- Fire Shot
- Blaster Announces "All personnel remain at your positions until the all clear has been sounded."
- Inspect Shot for misfires and to ensure all explosive materials have detonated.
- Blaster Announces "All Clear, All Clear."
- Radios are collected and accounted for from blockers.

*No unnecessary or unprofessional communication should take place on company radios.

RE: Transfer Truck Limitation on SR 91

Dear <<Company Name>>:

Please note that no transfer truck traffic is allowed on The Riverside County segment of SR 91 during the identified peak traffic hours. The transfer truck limitation is during the following peak hours:

- 7:30 AM to 8:30 AM
- 4:30 PM to 5:30 PM

This requirement is one of the mitigation measures imposed as a condition of the El Sobrante Landfill operating agreement.

If you have any questions or need further information, please call our main office at (951) 277-1740.

Sincerely,

**Mike Williams

RE: Truck Limitations and Litter from Vehicles Entering and Leaving El Sobrante Landfill

To: District Managers and Route Managers

Recently, we have received several residential complaints that have reached the County Board of Supervisors and Mayor's Office regarding drivers of transfer trucks and refuse vehicles littering the highway and overlooking mitigation measures and rules that pertain to transportation.

This communication is a reminder that all drivers delivering waste to El Sobrante Landfill are required to abide by these important regulations. No exceptions. Your role is critical in helping us manage this situation and maintain a positive working relationship with the community and county administrators.

Below are the mandatory policies and procedures for all drivers delivering waste to El Sobrante Landfill. We would appreciate it if you remind your drivers of the following so we can reach full participation and compliance.

Restricted Hours on the 91 Freeway

No transfer trucks originating from outside of Riverside County are allowed on the Riverside County segment of the SR 91 during the following identified peak traffic hours.

- 7:30 AM to 8:30 AM, Monday-Saturday
- 4:30 PM to 5:30 PM, Monday-Saturday

Exit Temescal Canyon Road Only

All vehicles delivering waste to El Sobrante Landfill must exit Temescal Canyon Road. Exiting Weirick Road from the I-15 or using an alternative exit to arrive to El Sobrante Landfill is prohibited.

Restricted Use of Temescal Canyon Road

All landfill customers must use Temescal Canyon Road and Dawson Canyon Road to travel to and from El Sobrante Landfill. Additionally, drivers can only use a portion of Temescal Canyon Road: from the I-15 Temescal Canyon Road exit to Dawson Canyon Road. When departing from the landfill, do not make a right hand turn onto Temescal Canyon Road from Dawson Canyon Road as this is an unpermitted transit route. All vehicles traveling to and from El Sobrante Landfill must utilize the I-15 Temescal Canyon Road entrance and exit.

Tarping Policy to Control Litter

We require all drivers to completely tarp their transfer trucks and refuse vehicles while on route to the landfill and *before* they depart from El Sobrante (after unloading the waste).

If you have any questions or need additional information, feel free to call me at (951) 277-5103 or (951) 277-5100.

A handwritten signature in black ink, appearing to read 'David Harich'.

David Harich
District Manager El Sobrante Landfill

Traffic-Related Provisions in El Sobrante Landfill Customer Contracts

1. Large Customers – Negotiated Contracts

Every large customer contract since the adoption of the Second Agreement has included a general provision requiring compliance with all applicable requirements of the Second Agreement, as amended. Here is an example from a 2007 customer agreement:

Customer agrees to comply with the requirements of any local jurisdiction regarding the delivery and disposal of Acceptable Waste at El Sobrante Landfill, including but not limited to the requirements set forth in the Second Agreement, and specifically the applicable provisions of Section 3.4.2 of the Second Agreement, as amended, which are incorporated by reference into this Agreement as if set forth herein in their entirety. In connection with Section 3.4.2(a)(iv) of the Second Agreement, Customer hereby grants Owner and/or the Riverside County Environmental Health a non-exclusive license to enter the Solid Waste Transfer Station for the sole purpose of inspecting such facility to verify compliance with the terms and conditions of the Second Agreement, at any time during its operating hours. A copy of Section 3.4.2(a)(iv) of the Second Agreement, as amended, is included as Exhibit A to this Agreement.

If an issue arose with the customer about peak hour usage of SR 91, USA Waste had the legal basis to require compliance.

Later, USA Waste made this provision more robust by including a copy of the entire Second Agreement as an exhibit to the customer agreement. Here is an example from 2011:

[Customer] agrees to comply with the requirements of any local jurisdiction regarding the delivery and disposal of Acceptable Waste at El Sobrante Landfill, including but not limited to the requirements set forth in the Second Agreement, and specifically the applicable provisions of Section 3.4.2 of the Second Agreement, as amended, which are incorporated by reference into this Agreement as if set forth herein in their entirety. In connection with Section 3.4.2(a)(iv) of the Second Agreement, [Customer] hereby grants Waste Management and/or the Riverside County Environmental Health Department a non-exclusive license to enter the [Customer] Transfer Station for the sole purpose of inspecting such facility to verify compliance with the terms and conditions of the Second Agreement, at any time during its operating hours. A copy of the El Sobrante Second Agreement, as amended, is included as Exhibit A to this Agreement.

More recently, all customer agreements expressly added the requirements of MM T-3 to the general compliance provision. Here is an example of the added provision from early 2014:

Delivery Hours. [Customer] may deliver Waste Materials from the Facilities to WM during the normal operating hours of the El Sobrante Landfill, as they may be set by WM. Currently, Waste Materials are accepted at the El Sobrante Landfill between 4:00 am on Monday through 6:00 pm on Saturday. WM encourages [Customer] to deliver Waste Materials between the hours of 8:30 pm

and 3:30 am beginning Monday at 8:30 pm and ending Saturday at 3:30 am. In addition to the above, and in order to allow WM to substantially comply with a mitigation measure applicable to the El Sobrante Landfill, travel on SR 91 by transfer vehicles through the City of Corona west of I-15 between 7:30-8:30 am and 4:30-5:30 pm Monday through Friday is strictly prohibited.

Finally, and most recently, an opportunity arose with a potential large customer to seek very strong contract language, which was accepted by the customer. The delivery hours discussion set forth immediately above was revised to state:

In addition, travel on SR 91 through Riverside County by transfer trailers between 5:00 am and 9:00 pm Monday through Saturday is strictly prohibited unless [Customer] is willing to install a GPS based tracking system on all trucks delivering waste to El Sobrante. In the event that [Customer] chooses to install a GPS tracking system and deliver waste to El Sobrante using SR 91, [Customer] shall make monthly reports available to Waste Management demonstrating that its trucks were not on the Riverside County portion of SR 91 between the hours of 7:30-8:30 am and 4:30-5:30 pm, Monday through Saturday.

It should be noted that the opportunity to request and obtain such a strong provision is likely limited to only a few customers. However, USA Waste will look for those opportunities in future new or renewed negotiated contracts.

2. Small Customers – Standard Service Agreement

For small customers, USA Waste uses a form standard contract. The current contract includes the following provision:

Customer agrees to abide by all requirements set forth in the Second El Sobrante Landfill Agreement. Transfer trucks hauling waste from out-of-County to El Sobrante that use State Route 91 shall travel to and from the landfill during off-peak hours for SR 91. Vehicles delivering waste to El Sobrante shall use the Temescal Canyon Road exit only, except in the event of on- and/or offramp closure.

However, in order to provide greater assurance of compliance, effective immediately all new or renewed standard service agreements will include the following provisions:

In accordance with the Second El Sobrante Landfill Agreement, dated September 1, 1998, as amended, various requirements condition the **receipt of Waste at the El Sobrante Landfill originating from outside of Riverside County**. Customer shall comply with these requirements to the extent applicable. While Customer is encouraged to familiarize itself with the entire Second Agreement (a copy of which will be provided upon request), in order to facilitate Customer's compliance with Second Agreement requirements, the requirements typically applicable to out of County waste deliveries are set forth below.

Where Waste is received from an **out of County solid waste facility that engages in the handling or processing of Waste requiring a permit (e.g., a solid waste transfer station or material recovery facility)**, Customer (i) shall

have a valid permit for such operations if one is required; (ii) shall have documented procedures to determine that hazardous material and other prohibited materials are not included in the Waste delivered; (iii) shall not ship Waste from any source which has been found by a governmental agency or court having jurisdiction to be in violation of the provisions of any applicable State or federal law dealing with waste diversion; (iv) shall allow Waste Management to inspect, without notice, any facility from which Waste will be delivered; (v) shall allow and acknowledges that Waste Management may terminate or suspend any contract with any facility shipping Waste if Waste Management determines that the solid waste facility is not operating in accordance with any required permit, or is not implementing its documented procedures, or that any community served by the solid waste facility is not meeting the provisions of any applicable State or federal law dealing with waste diversion; (vi) shall allow Riverside County LEA and/or Department of Environmental Health personnel to inspect its solid waste facility without prior notice from time-to-time, but not more often than once in any six-month period in the absence of a substantive violation of the terms of the facility's permit, and (vii) shall provide a copy of the annual report to the CalRecycle for AB 939 compliance to the Riverside County LEA.

Waste may be delivered either by direct hauling by Customer, by a third party hauler under contract with Customer, or by Waste Management. Waste may only be delivered in large transfer type trucks and trailers, or their equivalent.

Waste shall be delivered during the normal operating hours of the El Sobrante Landfill, as Waste Management may set them from time to time. Currently, Waste is accepted on a 24-hour basis between 4:00 am on Monday through 6:00 pm on Saturday. Waste Management encourages Customer to deliver Waste between the hours of 8:30 pm and 3:30 am beginning Monday at 8:30 pm and ending Saturday at 3:30 am.

Travel of Waste delivery vehicles on SR 91 through Riverside County between the hours of 7:30-8:30 am and 4:30-5:30 pm Monday through Saturday is strictly prohibited.

2013/14 & 2014/15

**Annual Report for Storm Water Discharges Associated with Industrial Activities
Analytical Report**

State of California
STATE WATER RESOURCES CONTROL BOARD

2013 2014
ANNUAL REPORT

FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2013 through June 30, 2014

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at <http://www.swrcb.ca.gov/stormwtr/contact.html>. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility Business Name: Waste Mgt Inc El Sobrante Land
Physical Address: 10910 Dawson Canyon Rd
City: Corona
SIC Code(s): 4953-Refuse Systems

Facility WDID No: 8 33I000559

Contact Person: Cody Gowgill
e-mail: ccowgill@wm.com
CA Zip: 92883 Phone: 951-277-5106

B. Facility Operator Information:

Operator Name: Waste Management Inc
Mailing Address: 10910 Dawson Canyon Rd
City: Corona

Contact Person: Cody Gowgill
e-mail: ccowgill@wm.com
State: CA Zip: 91719 Phone: 951-277-5106

C. Facility Billing Information:

Operator Name: _____
Mailing Address: _____
City: _____

Contact Person: _____
e-mail: _____
State: ____ Zip: _____ Phone: _____

2013 2014
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

☐ **YES** Go to Item D.2

☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

- i. ☐ Participating in an Approved Group Monitoring Plan

Group Name: _____

- ii. ☐ Submitted **No Exposure Certification (NEC)**

Date Submitted: _____

Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions?

☐ **YES**

☐ **NO**

- iii. ☐ Submitted **Sampling Reduction Certification (SRC)**

Date Submitted: _____

Re-evaluation Date: _____

Does facility continue to satisfy SRC conditions?

☐ **YES**

☐ **NO**

- iv. ☐ Received Regional Board Certification

Certification Date: _____

- v. ☐ Received Local Agency Certification

Certification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

☐ **YES** Go to Section E

☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? _____

1

If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

☒ **YES**

☐ **NO, attach explanation** (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? _____

7

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? ☐ YES, go to Item E.6 ☒ NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ NO ☒ YES, **attach explanation**
- If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated 03/24/2014
6. Were all samples collected during the first hour of discharge? ☒ YES ☐ NO, **attach explanation**
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☒ YES ☐ NO, **attach explanation**
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

- a. Do authorized non-storm water discharges occur at your facility?

☒

YES

☐

NO

Go to Item F.2

- b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September

☐ YES☐ NO☒ N/A

October-December

☐ YES☐ NO☒ N/A

January-March

☐ YES☐ NO☒ N/A

April-June

☐ YES☐ NO☒ N/A

- c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- name of each authorized non-storm water discharge
- date and time of observation
- source and location of each authorized non-storm water discharge
- characteristics of the discharge at its source and impacted drainage area/discharge location
- name, title, and signature of observer
- any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

- a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September

☒ YES☐ NO☐ N/A

October-December

☒ YES☐ NO☐ N/A

January-March

☒ YES☐ NO☐ N/A

April-June

☒ YES☐ NO☐ N/A

- b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☐

YES

☒

NO

Go to item F.2.d

- c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐

YES

☐

NO

Attach explanation

- d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- name of each unauthorized non-storm water discharge.
- date and time of observation.
- source and location of each unauthorized non-storm water discharge.
- characteristics of the discharge at its source and impacted drainage area/discharge location.
- name, title, and signature of observer.
- any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input type="checkbox"/>	<input checked="" type="checkbox"/>	February	<input checked="" type="checkbox"/>	<input type="checkbox"/>
November	<input type="checkbox"/>	<input checked="" type="checkbox"/>	March	<input type="checkbox"/>	<input checked="" type="checkbox"/>
December	<input type="checkbox"/>	<input checked="" type="checkbox"/>	April	<input type="checkbox"/>	<input checked="" type="checkbox"/>
January	<input type="checkbox"/>	<input checked="" type="checkbox"/>	May	<input type="checkbox"/>	<input checked="" type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

- date, time, and location of observation
- name and title of observer
- characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
- any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
The following areas should be inspected:

- areas where spills and leaks have occurred during the last year.
- outdoor wash and rinse areas.
- process/manufacturing areas.
- loading, unloading, and transfer areas.
- waste storage/disposal areas.
- dust/particulate generating areas.
- erosion areas.
- building repair, remodeling, and construction
- material storage areas
- vehicle/equipment storage areas
- truck parking and access areas
- rooftop equipment areas
- vehicle fueling/maintenance areas
- non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit?

☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Title: Site Engineer

ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

2013-2014

ANNUAL REPORT

EXPLANATIONS SPECIFIED FOR VARIOUS YES/NO QUESTIONS IN THE REPORT

Explanation Question	Explanation Text
E1	Only one rain event resulted in enough rainfall to cause a discharge.
E5	Stormwater discharge points that are not monitored are considered to be equivalent to discharge points that are monitored. The description of the discharge points include areas adjacent to Outfall A and Outfall B, which are open dirt lots. These drainage areas are identical in land use and characteristics and support the use of representative outfalls as substantially identical to those that are not sampled. The description of the discharge points also include areas represented by Outfall003, which is the main access road. These drainage areas are identical in land use and characteristics and support the use of representative outfalls as substantially identical to those that are not sampled.
G .October	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 10/22/13 rainfall did not result in a discharge.
G .November	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 11/20/13 rainfall did not result in a discharge.
G .December	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 12/18/13 rainfall did not result in a discharge.
G .January	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 1/29/14 rainfall did not result in a discharge.
G .March	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 3/26/14 rainfall did not result in a discharge.
G .April	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 4/23/14 rainfall did not result in a discharge.
G .May	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 5/20/14 rainfall did not result in a discharge.

State of California
STATE WATER RESOURCES CONTROL BOARD

2014 2015
ANNUAL REPORT

FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2014 through June 30, 2015

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at <http://www.swrcb.ca.gov/stormwtr/contact.html>. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility Business Name: WM El Sobrante Landfill
Physical Address: 10910 Dawson Canyon Rd
City: Corona
SIC Code(s): 4953-Refuse Systems

Facility WDID No: 8 33I000559

Contact Person: Cody Cowgill
e-mail: ccowgill@wm.com
CA Zip: 92883 Phone: 951-277-5106

B. Facility Operator Information:

Operator Name: USA Waste of California Inc
Mailing Address: 10910 Dawson Canyon Road
City: Corona

Contact Person: Cody Cowgill
e-mail: ccowgill@wm.com
State: CA Zip: 92883 Phone: 951-277-5106

C. Facility Billing Information:

Operator Name: _____
Mailing Address: _____
City: _____

Contact Person: _____
e-mail: _____
State: ____ Zip: _____ Phone: _____

2014 2015
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

☐ **YES** Go to Item D.2

☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

- i. ☐ Participating in an Approved Group Monitoring Plan

Group Name: _____

- ii. ☐ Submitted **No Exposure Certification (NEC)**

Date Submitted: _____

Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions?

☐ **YES**

☐ **NO**

- iii. ☐ Submitted **Sampling Reduction Certification (SRC)**

Date Submitted: _____

Re-evaluation Date: _____

Does facility continue to satisfy SRC conditions?

☐ **YES**

☐ **NO**

- iv. ☐ Received Regional Board Certification

Certification Date: _____

- v. ☐ Received Local Agency Certification

Certification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

☐ **YES** Go to Section E

☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? _____

1

If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

☒ **YES**

☐ **NO, attach explanation** (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? _____

7

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? ☐ YES, go to Item E.6 ☒ NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ NO ☒ YES, **attach explanation**
- If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated 12/01/2014
6. Were all samples collected during the first hour of discharge? ☒ YES ☐ NO, **attach explanation**
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☒ YES ☐ NO, **attach explanation**
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- _____ Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
 - Name and title of sampler.
 - Parameters tested.
 - Name of analytical testing laboratory.
 - Discharge location identification.
 - Testing results.
 - Test methods used.
 - Test detection limits.
 - Date of testing.
 - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

- a. Do authorized non-storm water discharges occur at your facility?

☒

YES

☐

NO

Go to Item F.2

- b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September

☐ YES☐ NO☒ N/A

October-December

☐ YES☐ NO☒ N/A

January-March

☐ YES☐ NO☒ N/A

April-June

☐ YES☐ NO☒ N/A

- c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

- a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September

☒ YES☐ NO☐ N/A

October-December

☒ YES☐ NO☐ N/A

January-March

☒ YES☐ NO☐ N/A

April-June

☒ YES☐ NO☐ N/A

- b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☐

YES

☒

NO

Go to item F.2.d

- c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐

YES

☐

NO

Attach explanation

- d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input type="checkbox"/>	<input checked="" type="checkbox"/>	February	<input type="checkbox"/>	<input checked="" type="checkbox"/>
November	<input type="checkbox"/>	<input checked="" type="checkbox"/>	March	<input type="checkbox"/>	<input checked="" type="checkbox"/>
December	<input checked="" type="checkbox"/>	<input type="checkbox"/>	April	<input type="checkbox"/>	<input checked="" type="checkbox"/>
January	<input type="checkbox"/>	<input checked="" type="checkbox"/>	May	<input type="checkbox"/>	<input checked="" type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

- date, time, and location of observation
- name and title of observer
- characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
- any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
The following areas should be inspected:

- areas where spills and leaks have occurred during the last year.
- outdoor wash and rinse areas.
- process/manufacturing areas.
- loading, unloading, and transfer areas.
- waste storage/disposal areas.
- dust/particulate generating areas.
- erosion areas.
- building repair, remodeling, and construction
- material storage areas
- vehicle/equipment storage areas
- truck parking and access areas
- rooftop equipment areas
- vehicle fueling/maintenance areas
- non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit?

☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

2014-2015

ANNUAL REPORT

FORM 5 - ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY BMP STATUS

Evaluation Date: 06/29/2015		Inspector Name: Cody Cowgill		Title: Site Engineer	
Potential Pollutant Source/Industrial Activity Area	Are any BMPs Not Fully Implemented?	Are Additional/Revised BMPs Necessary?	Deficiencies in BMPs or BMP implementation	Additional/Revised BMPs or Corrective Actions and their date(s) of Implementation	
Landfilling Operations	No	Yes	Sediment control from landfill outside slopes may not be adequate and basins may need structural improvements and/or maintenance to be more effective.	Upstream BMPs of additional straw wattles and/or flocculant logs around all surface water inlets will be installed by October 1, 2015. Temporary structural improvements and/or cleanout of stormwater basins to increase pollutant removal effectiveness will be done as soon as permits allow.	
Recycle Reload	No	No			
Flare Station and Gas Plant	No	No			
Fueling Area	No	No			
Other Areas (Access Roads)	No	No			
Liquid Handling	No	No			
Maintenance Shop	No	No			
New Construction	No	No			

ANNUAL REPORT**EXPLANATIONS SPECIFIED FOR VARIOUS YES/NO QUESTIONS IN THE REPORT**

Explanation Question	Explanation Text
E1	Only one rain event resulted in enough rainfall to cause a discharge.
E5	Stormwater discharge points that are not monitored are considered to be equivalent to discharge points that are monitored. The description of the discharge points include areas adjacent to Outfall A and Outfall B, which are open dirt lots. These drainage areas are identical in land use and characteristics and support the use of representative outfalls as substantially identical to those that are not sampled. The description of the discharge points also include areas represented by Outfall003, which is the main access road. These drainage areas are identical in land use and characteristics and support the use of representative outfalls as substantially identical to those that are not sampled.
G .October	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 10/31/14 rainfall did not result in a discharge.
G .November	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 11/26/14 rainfall did not result in a discharge.
G .January	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 1/12/15 rainfall did not result in a discharge.
G .February	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 2/17/15 rainfall did not result in a discharge.
G .March	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 3/17/15 rainfall did not result in a discharge.
G .April	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 4/17/15 rainfall did not result in a discharge.
G .May	No rain event resulted in enough rainfall to cause a discharge. Each discharge point was observed by Moses Romero, Gas Technician, during each rain event and the observation was recorded. 5/15/15 rainfall did not result in a discharge.

The test results in this report relate only to the samples in this report and meet all requirements of NELAP, with any exceptions noted. Pursuant to NELAP, this report shall not be reproduced except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the TestAmerica Denver Project Manager.

The Lab Certification ID# is E87667.
The Lab California Certification is # 2513.

Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.

TestAmerica Laboratories, Inc.

CASE NARRATIVE

Client: Waste Management

Project: 1030|EI Sobrante LF- Stormwater

Report Number: 280-52652-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

This report may include reporting limits (RLs) less than TestAmerica's standard reporting limit. The reported sample results and associated reporting limits are being used specifically to meet the needs of this project. Note that data are not normally reported to these levels without qualification because they are inherently less reliable and potentially less defensible than required by the latest industry standards.

Sample Receiving

The samples were received on 03/03/2014 and 03/04/2014; the samples arrived in good condition. The temperatures of the coolers at receipt were 5.4° C, 5.6° C and 19.2° C.

Sample OUTFALL NORTH arrived at a temperature of 19.2 C which is above the recommended maximum temperature of 6.0 C. The ice in the cooler was melted due to a delay in Fed Ex delivery. The laboratory proceeded with the analysis per client request. The client was notified on 3/5/2014.

The sample ID for sample OUTFALL B was listed on the chain of custody and the container labels as Apple B. The sample ID was changed to OUTFALL B per request. The client was notified on 3/5/2014.

Holding Times

The laboratory pH was measured outside of the TestAmerica recommended hold time and therefore the laboratory pH result is flagged with an "HF" flag.

All other holding times were met.

Method Blanks

Total Organic Carbon (TOC) Method 5310B was detected in the Method Blank at a concentration below the reporting limit but above the method detection limit. No corrective action is taken for results in Method Blank that are below the reporting limits.

All other Method Blanks were within established control limits.

Laboratory Control Samples (LCS)

All Laboratory Control Sample results were within established control limits.

Matrix Spike (MS) and Matrix Spike Duplicate (MSD)

The percent recoveries and/or relative percent difference of the MS/MSD performed on sample OUTFALL B were outside control limits for Total Iron Method 200.7 because the sample concentration was greater than four times the spike amount. Because the corresponding Laboratory Control Sample and the Method Blank sample were within control limits, no corrective action was taken.

The method required MS/MSD could not be performed for Method 1664A due to insufficient sample volume; however, a LCS/LCSD pair was analyzed to demonstrate method precision and accuracy.

All other MS and MSD samples were within established control limits.

Sample Duplicate

The RPD for Total Suspended Solids Method 2540D performed on a sample from another client was outside control limits. Because all other QC and calibration criteria were met no corrective action was needed.

General Chemistry

Due to the sample matrix, the initial volume used for the samples OUTFALL B and OUTFALL001_D-1 deviated from the standard procedure for TSS. The reporting limit (RL) has been adjusted proportionately.

General Comments

For samples requiring analysis at a dilution, the dilution factor has been multiplied by the Method Detection Limit (MDL) for each analyte and evaluated versus the project-specific reporting limit (PSRL). If the obtained value is below the PSRL, then the PSRL is preserved as the reporting limit for the diluted result, otherwise, the obtained value becomes the reporting limit. This is done in order to maintain the PSRL to meet permit requirements at the request of the client and to report the lowest possible RL for each analyte.

Waste Management

DATA REPORTING QUALIFIERS

Client: Waste Management

Job Number: 280-52652-1

Lab Section	Qualifier	Description
Metals	4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
General Chemistry	B	Compound was found in the blank and sample.
	HF	Field parameter with a holding time of 15 minutes
	J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	True	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Sampling Company provided.	True	
Samples received within 48 hours of sampling.	False	
Samples requiring field filtration have been filtered in the field.	True	
Chlorine Residual checked.	N/A	

State of California
STATE WATER RESOURCES CONTROL BOARD

2013 2014
ANNUAL REPORT

FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2013 through June 30, 2014

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at <http://www.swrcb.ca.gov/stormwtr/contact.html>. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility Business Name: Waste Mgt Inc El Sobrante Land
Physical Address: 10910 Dawson Canyon Rd
City: Corona
SIC Code(s): 4953-Refuse Systems

Facility WDID No: 8 33I000559

Contact Person: Cody Gowgill
e-mail: ccowgill@wm.com
CA Zip: 92883 Phone: 951-277-5106

B. Facility Operator Information:

Operator Name: Waste Management Inc
Mailing Address: 10910 Dawson Canyon Rd
City: Corona

Contact Person: Cody Gowgill
e-mail: ccowgill@wm.com
State: CA Zip: 91719 Phone: 951-277-5106

C. Facility Billing Information:

State: ____ Zip: _____ Phone: _____

2013 2014
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

☐ **YES** Go to Item D.2

☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

- i. ☐ Participating in an Approved Group Monitoring Plan

Group Name: _____

- ii. ☐ Submitted **No Exposure Certification (NEC)**

Date Submitted: _____

Re-evaluation Date: _____

Does facility continue to satisfy NEC conditions?

☐ **YES**

☐ **NO**

- iii. ☐ Submitted **Sampling Reduction Certification (SRC)**

Date Submitted: _____

Re-evaluation Date: _____

Does facility continue to satisfy SRC conditions?

☐ **YES**

☐ **NO**

- iv. ☐ Received Regional Board Certification

Certification Date: _____

- v. ☐ Received Local Agency Certification

Cetification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

☐ **YES** Go to Section E

☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? _____

1

If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

☒ **YES**

☐ **NO, attach explanation** (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? _____

7
