BACKGROUND:

Summary

The Riverside County Department of Waste Resources (Department) has solicited proposals to perform geotechnical and geological studies to evaluate areas within the Lamb Canyon Landfill (LCL) for future landfill expansion. As required by Title 27 of the California Code of Regulations (CCR) and Subtitle D of Title 40 of the Code of Federal Regulations (CFR); areas proposed for landfill expansion must be approved by processing a revision to the LCL Solid Waste Facility Permit (SWFP) and constructing a composite liner system.

The geologic/geotechnical studies will identify if any active faults, landslides or any other geologic instabilities within potential landfill expansion areas may affect the design feasibility of the future liner system. Department staff will utilize the information gained from the studies to ensure the design of the future Phase III expansion mitigates any potential hazards to the environment and secures future solid waste disposal capacity for the residents of Riverside County. This contract only involves geotechnical and geological evaluation for future landfill development at the LCL.

Impact on Residents and Businesses

Geologic and geotechnical studies will protect the health and safety of County residents by identifying potential hazards and providing mitigation measures to ensure that the environment and the public are protected as part of the design of the future Phase III expansion.

Additional Fiscal Information

All costs associated with this professional services agreement are fully funded by the Department's Enterprise Fund and sufficient funding is available in the Department's budget for Fiscal Year 2022/23. No net County costs will be incurred as a result of this professional services agreement.

Contract History and Price Reasonableness

County Purchasing Department released a Request for Proposal (RFP) WMARC-417, soliciting proposals for Geological and Geotechnical Services at the LCL on behalf of the Department. The RFP was sent to over fifty (50+) potential bidders and was advertised on the Purchasing website. Two (2) bid responses were received in response to the RFP. The proposals were

reviewed by the evaluation team from Department staff. Each bid response was evaluated based on the criteria set forth in the RFP: overall responses to the RFP requirements and project tasks, bidders experience and technical ability, cost & fees, references, credentials, resumes, licenses, certifications, and financials. The cost proposal range submitted was from \$484,046 to \$548,778. The County of Riverside requested Best and Final offers from the two firms resulting in final cost proposal from Geologic Associates, Inc. (GLA) of \$375,579.

Based on the overall summation of the proposals submitted, it is the recommendation of the evaluation team to select GLA as the most responsive/responsible bidder for these services.

4) It is understood and agreed to by the parties hereto that the CONTRACTOR'S insurance shall be construed as primary insurance, and the COUNTY'S insurance and/or deductibles and/or self-insured retention's or self-insured programs shall not be construed as contributory.

5) If, during the term of this Agreement or any extension thereof, there is a material change in the scope of services; or, there is a material change in the equipment to be used in the performance of the scope of work; or, the term of this Agreement, including any extensions thereof, exceeds five (5) years; the COUNTY reserves the right to adjust the types of insurance and the monetary limits of liability required under this Agreement, if in the County Risk Manager's reasonable judgment, the amount or type of insurance carried by the CONTRACTOR has become inadequate.

6) CONTRACTOR shall pass down the insurance obligations contained herein to all tiers of subcontractors working under this Agreement.

7) The insurance requirements contained in this Agreement may be met with a program(s) of self-insurance acceptable to the COUNTY.

8) CONTRACTOR agrees to notify COUNTY of any claim by a third party or any incident or event that may give rise to a claim arising from the performance of this Agreement.

23. General

23.1 CONTRACTOR shall not delegate or assign any interest in this Agreement, whether by operation of law or otherwise, without the prior written consent of COUNTY. Any attempt to delegate or assign any interest herein shall be deemed void and of no force or effect.

23.2 Any waiver by COUNTY of any breach of any one or more of the terms of this Agreement shall not be construed to be a waiver of any subsequent or other breach of the same or of any other term of this Agreement. Failure on the part of COUNTY to require exact, full, and complete compliance with any terms of this Agreement shall not be construed as in any manner changing the terms or preventing COUNTY from enforcement of the terms of this Agreement.

23.3 In the event the CONTRACTOR receives payment under this Agreement, which is later disallowed by COUNTY for nonconformance with the terms of the Agreement, the CONTRACTOR shall promptly refund the disallowed amount to the COUNTY on request; or at its option the COUNTY may offset the amount disallowed from any payment due to the CONTRACTOR.

23.4 CONTRACTOR shall not provide partial delivery or shipment of services or products unless specifically stated in the Agreement.

23.5 CONTRACTOR shall not provide any services or products subject to any chattel mortgage or under a conditional sales contract or other agreement by which an interest is retained by a third party. The CONTRACTOR warrants that it has good title to all materials or products used by CONTRACTOR or provided to COUNTY pursuant to this Agreement, free from all liens, claims, or encumbrances.

23.6 Nothing in this Agreement shall prohibit the COUNTY from acquiring the same type or equivalent equipment, products, materials or services from other sources, when deemed by the COUNTY to be in its best interest. The COUNTY reserves the right to purchase more or less than the quantities specified in this Agreement.

23.7 The COUNTY agrees to cooperate with the CONTRACTOR in the CONTRACTOR's performance under this Agreement, including, if stated in the Agreement, providing the CONTRACTOR with reasonable facilities and timely access to COUNTY data, information, and personnel.

23.8 CONTRACTOR shall comply with all applicable Federal, State and local laws and regulations. CONTRACTOR will comply with all applicable COUNTY policies and procedures. In the event that there is a conflict between the various laws or regulations that may apply, the CONTRACTOR shall comply with the more restrictive law or regulation.

23.9 CONTRACTOR shall comply with all air pollution control, water pollution, safety and health ordinances, statutes, or regulations, which apply to performance under this Agreement.

23.10 CONTRACTOR shall comply with all requirements of the Occupational Safety and Health Administration (OSHA) standards and codes as set forth by the U.S. Department of Labor and the State of California (Cal/OSHA).

23.11 This Agreement shall be governed by the laws of the State of California. Any legal action related to the performance or interpretation of this Agreement shall be filed only in the Superior Court of the State of California located in Riverside, California, and the parties waive any provision of law providing for a change of venue to another location. In the event any provision in this Agreement is held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remaining provisions will nevertheless continue in full force without being impaired or invalidated in any way.

23.12 This Agreement, including any attachments or exhibits, constitutes the entire Agreement of the parties with respect to its subject matter and supersedes all prior and contemporaneous representations,

proposals, discussions and communications, whether oral or in writing. This Agreement may be changed or modified only by a written amendment signed by authorized representatives of both parties.

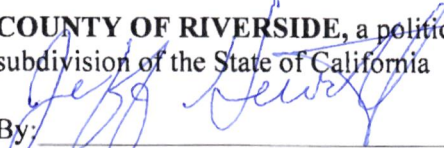

24. Electronic Signatures

This Agreement may be executed in any number of counterparts, each of which will be an original, but all of which together will constitute one instrument. Each party to this Agreement agrees to the use of electronic signatures, such as digital signatures that meet the requirements of the California Uniform Electronic Transactions Act (“CUETA”) (Cal. Civ. Code §§ 1633.1 to 1633.17), for executing this Agreement. The parties further agree that the electronic signatures of the parties included in this Agreement are intended to authenticate this writing and to have the same force and effect as manual signatures. Electronic signature means an electronic sound, symbol, or process attached to or logically associated with an electronic record and executed or adopted by a person with the intent to sign the electronic record pursuant to the CUETA as amended from time to time. The CUETA authorizes use of an electronic signature for transactions and contracts among parties in California, including a government agency. Digital signature means an electronic identifier, created by computer, intended by the party using it to have the same force and effect as the use of a manual signature, and shall be reasonably relied upon by the parties. For purposes of this section, a digital signature is a type of "electronic signature" as defined in subdivision (i) of Section 1633.2 of the Civil Code.

EXHIBIT "A"
SCOPE OF SERVICES

All Work shall be performed under the direct supervision of a California-registered Geotechnical Engineer (GE) or a California-registered Certified Engineering Geologist (CEG). The CONTRACTOR's project team hierarchy along with team qualifications submitted with their proposal are incorporated as referenced herein. Any changes to the CONTRACTOR's project team hierarchy during the duration of this Agreement shall be made in writing and given to the COUNTY.

Request for Change/Change Order (RFC)

- Any alterations to the Scope of Services and or individual task items set forth will be subject to approval via written Change Order.
- CONTRACTOR must submit a Request for Change (RFC) when CONTRACTOR proposes a change in the Contract requirements. CONTRACTOR is required to fully describe the benefit(s) to the County, benefit(s) to the CONTRACTOR, the cost and/or schedule impact(s) associated with the requested change, along with whether or not CONTRACTOR proposes or requires a Contract Change Order for implementing the change. It is understood that certain RFCs can be responded to promptly, with minimal expenditures required by COUNTY. It is also understood that other RFCs require significant expenditures by COUNTY in order to properly evaluate and respond to CONTRACTOR's RFC. For those RFCs that fall in the latter category, COUNTY will provide an estimate (time and cost) to CONTRACTOR as an initial response to RFC. CONTRACTOR may then elect to have COUNTY proceed with evaluating CONTRACTOR's RFC" (copied from the attached Facility Improvements Project Contract Documents – Detailed Provisions Section 01 3100-1.09).
- It is understood that certain RFCs can be responded to promptly, with minimal expenditures required by COUNTY. It is also understood that other RFCs require significant expenditures by COUNTY in order to properly evaluate and respond to CONTRACTOR's RFC. For those RFCs that fall in the latter category, COUNTY will provide an estimate (time and cost) to CONTRACTOR as an initial response to RFC. CONTRACTOR may then elect to have COUNTY proceed with evaluating CONTRACTOR's RFC (with estimated value deducted from CONTRACTOR's Contract with the

County), or elect to withdraw CONTRACTOR's RFC. The extra cost for any change or addition to the work so ordered will not exceed: Twenty-five thousand dollars (\$25,000), plus five (5) percent of the amount of the original contract cost in excess of two hundred fifty thousand dollars (\$250,000), as specified in Riverside County Board of Supervisors Policy B-11, Section III.C.2 (BOS POLICY-B11) and Section 20142 of the Public Contract Code. The Department will seek approval from its Board of Supervisors to authorize its General Manager - Chief Engineer to execute change orders in accordance with the Public Contract Code.

Task 1 – Review Existing Geotechnical and Geologic Data:

- The CONTRACTOR shall review all available geotechnical and geologic data for the Lamb Canyon Landfill (LCL). Upon execution of this Agreement, the Department will provide geologic, geotechnical, and hydrology reports that have been performed at LCL for review. In addition, the design CONTRACTOR shall be responsible for accessing and reviewing all available historical data including, but not limited to: aerial photography and topographic data. The CONTRACTOR shall also review all available data at and surrounding the project site including geologic maps, hazard maps; fault zone maps, well data, etc.

Task 2 – Perform Geologic Mapping:

- The CONTRACTOR shall perform mapping of exposed geologic units within the project limits to provide a record of geologic conditions. Geologic mapping performed for previous excavation operations for the Phase II Expansion will be made available to the CONTRACTOR upon request. Following the execution of this Agreement and prior to any field exploration, the CONTRACTOR shall develop a site-specific health and safety program (HASP). The HASP shall be submitted to the Department for approval. Once approved, the HASP shall be maintained on-site during exploration.
- Deliverables:
 - Health and Safety Plan (HASP)
 - Draft Geologic Map (including representative geologic cross sections).

Task 3 – Conduct a Subsurface Field Investigation:

- The CONTRACTOR shall perform a field investigation to identify site characteristics. The CONTRACTOR's developed preliminary field investigation program that identifies proposed exploration types, quantities, locations, depths, etc., as follows:
 - Develop a drilling program that focuses on finding 20 gallons per minute (30,000 gallons per day) of non-potable water.
 - Drill at the locations that provide information about structural geology at the site (e.g., top of the ridge along SCE road, as close as possible to fractures/fault traces (but not beneath high-voltage lines).
 - Drill at locations that provide information that can be used to assess hydrogeologic conditions at the site.
 - Drill at the locations that allow for conversion of exploratory boreholes into groundwater monitoring and/or production wells, while also providing relevant geologic and geotechnical information. If 20 gallons per minute is found, the exploratory borehole will be converted into a groundwater production well and a monitoring well will be installed later as grading for the Phase III progresses. If 20 gallons per minute is not found, the exploratory borehole will be converted into a monitoring well.
 - Maximize the use of CPT (Cone Penetrating Testing) soundings. This calls for CPT soundings at select, geologist-identified locations along the bottom of Canyon to demonstrate that the proposed Canyon III grading will remove alluvium/colluvium from below target landfill subgrade elevation.
- Given the above outlined multi-purpose approach, the scope **Items 1 through 10 are identical to their counterparts presented in Task 6**. They include:
 1. Advancement of one (1) hollow stem borehole to a depth of up to 150 feet below the existing ground surface (GLA-1, advanced in alluvium at the at the southern limit of the Canyon III expansion);
 2. Advancement of two (2) air rotary boreholes to a depth of up to 150 feet below the existing ground surface (GLA-2 and GLA-3, advanced on the South California Edison (SCE) access road);
 3. Soil logging (GLA-1) and geologic logging of subsurface geology (GLA-2 and GLA-3);
 4. Geotechnical in situ testing within top 50 feet of GLA-1 (Standard Penetration test, SPT; no benefit for testing below);

5. Geotechnical sampling within top 100 feet of GLA-1 (alternate California Modified and SPT samplers; sampling depth limit is likely on the order of 100 ft). Note: laboratory testing for samples recovered below 35 ft is limited to classification/index testing. Information from top 35 feet can be used for future basin and spillway design;
 6. Conversion of boreholes GLA-1, GLA-2, and GLA-3 into groundwater monitoring wells;
 7. Development of groundwater monitoring wells GLA-1, GLA-2, and GLA-3;
 8. Slug and bail testing in GLA 1, GLA 2, and GLA 3 in accordance with ASTM D4044/D4044M-15;
 9. Cone Penetration Test (CPT) sounding in the vicinity of GLA-1 to assess thickness of alluvium/ hollow stem auger penetration depth, sampling intervals (sample "weakest material identified by CPT), and, possibly, assess groundwater elevation; and
 10. CPT sounding along canyon bottom (to assess if proposed grading eliminates all alluvium/colluvium) and thickness of landslide debris (where accessible/feasible).
- The CONTRACTOR shall be required to obtain all required drilling and/or well permits as authorized by local jurisdictions. A copy of permits and/or permit applications shall be submitted to the Department and maintained on-site during exploration.
 - It shall be the CONTRACTOR's responsibility to perform coordination between their subcontractors and the Department. This shall include, but is not limited to: coordinating site access, abiding by landfill site safety rules, providing a proposed exploration schedule with timeframes to the Department, and staking out proposed boring locations prior to exploration (when applicable).
 - Deliverables:
 - Updated Field Investigation Program.
 - Drilling Permits (if required)
 - Well Permits

Task 4 – Perform Laboratory Testing:

- CONTRACTOR will develop a site-specific laboratory testing program and perform geotechnical laboratory testing of representative soil samples accordingly. Samples will be recovered during the field investigation program at the site (Tasks 3 and 6). Samples will be properly identified, transported, handled, stored, and tested. Testing will be performed in accordance with appropriate

testing standards, including the American Society for Testing and Materials (ASTM International) standards. Proper health and safety procedures will be followed.

- Deliverables:
 - Laboratory Certification
 - Laboratory Testing Program

Task 5 – Provide a Geotechnical Design Report:

- The CONTRACTOR shall prepare and submit a geotechnical design report. The report shall include a brief project background, identify existing site conditions, provide a detailed summary of the field investigation program and laboratory test results, summarize the geologic site characteristics, provide a geologic hazard assessment, define any limitations or assumptions, and provide engineering design analyses and recommendations, which may include, but are not limited to: slope stability analyses, borrow source evaluation, geotechnical recommendations for the proposed excavation and refuse fill plans, etc. Exploration types and locations shall be clearly identified on a project site map. All exploration records and laboratory test results shall be included as appendices to the report. The report shall include the appropriate maps, cross-sections, design criteria, calculations, and any other necessary supporting documents needed for a comprehensive design.
- Engineering evaluations will be properly explained, supported and documented, as follows:
 - Evaluation of Seismic Hazard Parameters and Development of Design Ground Motions
 - Cut Slopes - Evaluation of Shear Strength
 - Cut Slopes – Representative Cross Sections
 - Cut Slopes - Static and Seismic Stability Evaluations
 - Waste Fill (Final Buildout and Interim Fill) – Representative Cross Sections
 - Waste Fill (Final Buildout and Interim Fill) - Interface Shear Strength
 - Waste Fill (Final Buildout and Interim Fill) - Static and Seismic Stability Evaluations
 - Additional Considerations
 - Recommendations – The CONTRACTOR will develop recommendations for the proposed excavation (grading) and base and side slope composite liner systems, including refuse fill plans. Supplemental recommendations will include:

- Recommendations related to the replenishment of the existing stockpiles (“south,” “north,” and “existing north borrow”). Identify which of the three stockpiles can be replenished with soil excavated by grading. Assess safe location(s) for additional stockpile(s) that would be required for storing material suitable for the construction of the low-permeability component of the Phase III composite liner system. Evaluate a possibility for soil stockpiling on top deck (might not be feasible due to the presence of landfill gas collection pipes).
 - Surface water management – evaluate the potential for periodic infiltration of surface water into a middle stockpile. There is a possibility to allow for infiltration of surface water into groundwater to replenish a production well(s).
 - Evaluate a potential for occurrence of seeps within Canyon III areas that will be lined with a composite liner system. If such a potential is identified by the CONTRACTOR’s Lead Geologist/Hydrogeologist, the CONTRACTOR will develop recommendations for a system of underdrains.
- Reporting and Coordination:
 - Following the completion of the laboratory testing, data interpretation, and engineering evaluation, the CONTRACTOR will prepare draft and final Geotechnical Design Reports. The reports will follow the outline presented above. Each of the listed items, including assumptions, methods of interpretation and evaluation, and findings will be elaborated and explained in detail. The reports will include the appropriate maps, cross-sections, design criteria, calculations, and other supporting documents needed for rapid approval of design and construction documents for the proposed expansion. The final report will be signed and sealed by a California-Registered Civil Engineer and a California Certified Engineering Geologist and California Certified Hydrogeologist.
 - Regulatory Interface meeting with Santa Ana RWQCB if required.
 - Deliverables:
 - Draft and Final Geotechnical Design Reports.

Task 6 – Conduct a Hydrogeologic Site Study:

- Drilling to depths greater than 150 feet below ground surface, and up to 300 feet below the ground surface (to penetrate into fractured granite). Drilling at greater depths will likely require switching to a down-hole hammer drill bit to penetrate through crystalline basement (granitic) rock.
- Use of the existing infrastructure (e.g., wells LC 2, LC 7, and LC 9) to evaluate hydraulic conductivity and yield of the San Timoteo formation, and the uniformity of thereof. This will be achieved by means of slug and bail analyses. Pumping tests will also allow us to evaluate the effect of pumping on the water table and adjacent monitoring wells.
- Use of borehole geophysics to further and better understand the characteristics of potentially water-bearing strata.
- Evaluate the possibility that a network of multiple wells constructed across the site including “deep” well(s) that penetrate into fractured granite may yield desired recovery of 20 gallons per minute (30,000 gallons per day).
- Deliverables:
 - Hydrogeologic Report
