			Sum = 100.000	Sum= 7.256

The following loss rate calculations reflect use of the minimum calculated loss rate subtracted from the Storm Rain to produce the maximum Effective Rain value

Unit Time (Hr.)	Pattern Percent	Storm Rain (In/Hr)	Loss rate(In./Hr) Max	Low	Effective (In/Hr)
1. 0.08	0.07	0.023	(0.265)	0.004	0.019
2. 0.17	0.07	0.023	(0.264)	0.004	0.019
3. 0.25	0.07	0.023	(0.263)	0.004	0.019

++
Process from Point/Station 100.000 to Point/Station 110.000
**** RETARDING BASIN ROUTING ****

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 14
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Depth vs. Storage and Depth vs. Discharge data:

Basin Depth (Ft.)	Storage (Ac.Ft)	Outflow (CFS)	(S-O*dt/2) (Ac.Ft)	(S+O*dt/2) (Ac.Ft)

Copyright (c) CIVILCADD/CIVILDESIGN, 1989 - 2012
Study date: 12/01/23

2177 PERRIS NORTH DEVELOPMENT
DETENTION ROUTING ANALYSIS
10 YR - 1 HR STORM

Program License Serial Number 6313

********** HYDROGRAPH INFORMATION **********

From study/file name: 2177UHP110.rte
**********HYDROGRAPH DATA**********
Number of intervals = 14
Time interval = 5.0 (Min.)
Maximum/Peak flow rate = 14.495 (CFS)
Total volume = 0.435 (Ac.Ft)

Status of hydrographs being held in storage

	Stream 1	Stream 2	Stream 3	Stream 4	Stream 5
Peak (CFS)	0.000	0.000	0.000	0.000	0.000
Vol (Ac.Ft)	0.000	0.000	0.000	0.000	0.000

****

++
Process from Point/Station 100.000 to Point/Station 110.000
**** RETARDING BASIN ROUTING ****

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 14
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Depth vs. Storage and Depth vs. Discharge data:

Basin Depth (Ft.)	Storage (Ac.Ft)	Outflow (CFS)	(S-O*dt/2) (Ac.Ft)	(S+O*dt/2) (Ac.Ft)

_____

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 290
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Depth vs. Storage and Depth vs. Discharge data:

Basin Depth (Ft.)	Storage (Ac.Ft)	Outflow (CFS)	(S-O*dt/2) (Ac.Ft)	(S+O*dt/2) (Ac.Ft)

Program License Serial Number 6313

********** HYDROGRAPH INFORMATION **********

From study/file name: 2177UHP6100.rte
**********HYDROGRAPH DATA**********
Number of intervals = 74
Time interval = 5.0 (Min.)
Maximum/Peak flow rate = 11.994 (CFS)
Total volume = 1.481 (Ac.Ft)

Status of hydrographs being held in storage

	Stream 1	Stream 2	Stream 3	Stream 4	Stream 5
Peak (CFS)	0.000	0.000	0.000	0.000	0.000
Vol (Ac.Ft)	0.000	0.000	0.000	0.000	0.000

****

++
Process from Point/Station 100.000 to Point/Station 110.000
**** RETARDING BASIN ROUTING ****

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 74
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Depth vs. Storage and Depth vs. Discharge data:

Basin Depth (Ft.)	Storage (Ac.Ft)	Outflow (CFS)	(S-O*dt/2) (Ac.Ft)	(S+O*dt/2) (Ac.Ft)

_____

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 290
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Depth vs. Storage and Depth vs. Discharge data:

Basin Depth (Ft.)	Storage (Ac.Ft)	Outflow (CFS)	(S-O*dt/2) (Ac.Ft)	(S+O*dt/2) (Ac.Ft)

Rational Method Hydrology Program based on
Riverside County Flood Control & Water Conservation District
1978 hydrology manual

Storm event (year) = 10.00 Antecedent Moisture Condition = 2

Standard intensity-duration curves data (Plate D-4.1)
For the [Perris Valley] area used.
10 year storm 10 minute intensity = 1.880(In/Hr)
10 year storm 60 minute intensity = 0.780(In/Hr)
100 year storm 10 minute intensity = 2.690(In/Hr)
100 year storm 60 minute intensity = 1.120(In/Hr)

Storm event year = 10.0
Calculated rainfall intensity data:
1 hour intensity = 0.780(In/Hr)
Slope of intensity duration curve = 0.4900

++
Process from Point/Station 200.000 to Point/Station 210.000
**** INITIAL AREA EVALUATION ****

Initial area flow distance = 669.000(Ft.)
Top (of initial area) elevation = 68.800(Ft.)
Bottom (of initial area) elevation = 58.590(Ft.)
Difference in elevation = 10.210(Ft.)
Slope = 0.01526 s(percent)= 1.53

```
TC = k(0.300)*[(length^3)/(elevation change)]^0.2
Initial area time of concentration =    9.345 min.
Rainfall intensity =      1.940(In/Hr) for a    10.0 year storm
COMMERCIAL subarea type
Runoff Coefficient = 0.847
Decimal fraction soil group A = 1.000
Decimal fraction soil group B = 0.000
Decimal fraction soil group C = 0.000
Decimal fraction soil group D = 0.000
RI index for soil(AMC 2)  =  32.00
Pervious area fraction =  0.100; Impervious fraction =  0.900
Initial subarea runoff =      0.690(CFS)
Total initial stream area =        0.420(Ac.)
Pervious area fraction = 0.100

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
Process from Point/Station      210.000 to Point/Station      220.000
**** STREET FLOW TRAVEL TIME + SUBAREA FLOW ADDITION ****
________________________________________________________________________
Top of street segment elevation =    58.590(Ft.)
End of street segment elevation =    53.500(Ft.)
Length of street segment  =   572.000(Ft.)
Height of curb above gutter flowline  =    6.0(In.)
Width of half street (curb to crown)  =  22.000(Ft.)
Distance from crown to crossfall grade break  =  20.000(Ft.)
Slope from gutter to grade break (v/hz) =   0.050
Slope from grade break to crown (v/hz)  =   0.020
Street flow is on [1] side(s) of the street
Distance from curb to property line  =  10.000(Ft.)
Slope from curb to property line (v/hz) =   0.020
Gutter width =   2.000(Ft.)
Gutter hike from flowline =  2.000(In.)
 Manning's N in gutter =  0.0150
 Manning's N from gutter to grade break =  0.0150
 Manning's N from grade break to crown =  0.0150
Estimated mean flow rate at midpoint of street =      1.074(CFS)
Depth of flow =   0.264(Ft.), Average velocity =   1.791(Ft/s)
Streetflow hydraulics at midpoint of street travel:
Halfstreet flow width =   6.878(Ft.)
Flow velocity =   1.79(Ft/s)
Travel time =    5.32 min.     TC =   14.67  min.
 Adding area flow to street
COMMERCIAL subarea type
Runoff Coefficient = 0.842

PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20/HS25
- APPROX. LINEAR FOOTAGE = 4,577 LF

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = N/A
- PIPE STORAGE VOLUME = 89,859 CF
- BACKFILL STORAGE VOLUME = 41,440 CF
- TOTAL STORAGE PROVIDED = 131,300 CF

PIPE DETAILS
- DIAMETER = 60"
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = PERFORATED
- BARREL SPACING = 30"

BACKFILL DETAILS
- WIDTH AT ENDS = 12"
- ABOVE PIPE = 2"
- WIDTH AT SIDES = 12"
- BELOW PIPE = 6"

NOTES

- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE $2\frac{2}{3}$" x $\frac{1}{2}$" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

SHEET NO.: 1		

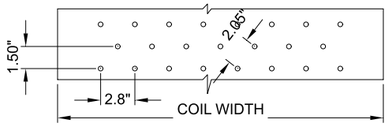
	Infiltration Systems - CMP Infiltration & CMP Perforated Drainage Pipe			
	Material Location	Description	Material Designation	Designation
8	Rigid or Flexible Pavement (if applicable)			
7	Road Base (if applicable			
A	Geotextile Layer	Non-Woven Geotextile	CONTECH C-40 or C-45	Engineer Decision for consideration to prevent soil migration into varying soil types. Wrap the trench only.
6	Backfill	Infiltration pipe systems have a pipe perforation sized of 3/8" diameter. An open graded, free draining stone, with a particle size of ½" – 2 ½" diameter is recommended.	AASHTO M 145-A-1 or AASHTO M 43 - 3, 4	Material shall be worked into the pipe haunches by means of shovel-slicing, rodding, air-tamper, vibratory rod, or other effective methods. Compaction of all placed fill material is necessary and shall be considered adequate when no further yielding of the material is observed under the compactor, or under foot, and the Project Engineer or his representative is satisfied with the level of compaction"
3	Bedding Stone	Well graded granular bedding material w/maximum particle size of 3"	AASHTO M43 - 3,357,4,467, 5, 56, 57	For soil aggregates larger than 3/8" a dedicated bedding layer is not required for CMP. Pipe may be placed on the trench bottom comprised of native suitable well graded & granular material. For Arch pipes it is recommended to be shaped to a relatively flat bottom or fine-grade the foundation to a slight v-shape. Soil aggregates less than 3/8" and unsuitable material should be over-excavated and re-placed with a 4"-6" layer of well graded & granular stone per the material designation.
A	Geotextile Layer	None	None	Contech does not recommend geotextiles be placed under the invert of Infiltration systems due to the propensity for geotextiles to clog over time.
*	Note: The listed AASHTO designations are for gradation only. The stone must also be angular and clean.			

1 MINIMUM WIDTH DEPENDS ON SITE CONDITIONS AND ENGINEERING JUDGEMENT.

FOUNDATION/BEDDING PREPARATION

2 PRIOR TO PLACING THE BEDDING, THE FOUNDATION MUST BE CONSTRUCTED TO A UNIFORM AND STABLE GRADE. IN THE EVENT THAT UNSUITABLE FOUNDATION MATERIALS ARE ENCOUNTERED DURING EXCAVATION, THEY SHALL BE REMOVED AND BROUGHT BACK TO THE GRADE WITH A FILL MATERIAL AS APPROVED BY THE ENGINEER.

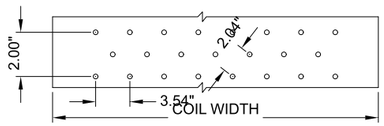
5 HAUNCH ZONE MATERIAL SHALL BE PLACED AND UNIFORMLY COMPACTED WITHOUT SOFT SPOTS.



BACKFILL

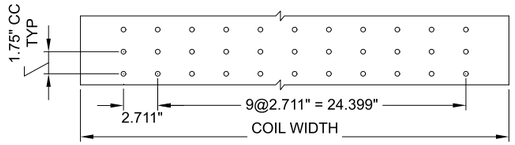
MATERIAL SHALL BE PLACED IN 8"-10" MAXIMUM LIFTS. INADEQUATE COMPACTION CAN LEAD TO EXCESSIVE DEFLECTIONS WITHIN THE SYSTEM AND SETTLEMENT OF THE SOILS OVER THE SYSTEM. BACKFILL SHALL BE PLACED SUCH THAT THERE IS NO MORE THAN A TWO-LIFT DIFFERENTIAL BETWEEN THE SIDES OF ANY PIPE IN THE SYSTEM AT ALL TIMES DURING THE BACKFILL PROCESS. BACKFILL SHALL BE ADVANCED ALONG THE LENGTH OF THE SYSTEM AT THE SAME RATE TO AVOID DIFFERENTIAL LOADING ON ANY PIPES IN THE SYSTEM.

EQUIPMENT USED TO PLACE AND COMPACT THE BACKFILL SHALL BE OF A SIZE AND TYPE SO AS NOT TO DISTORT, DAMAGE, OR DISPLACE THE PIPE. ATTENTION MUST BE GIVEN TO PROVIDING ADEQUATE MINIMUM COVER FOR SUCH EQUIPMENT. MAINTAIN BALANCED LOADING ON ALL PIPES IN THE SYSTEM DURING ALL SUCH OPERATIONS.



OTHER ALTERNATE BACKFILL MATERIAL MAY BE ALLOWED DEPENDING ON SITE SPECIFIC CONDITIONS. REFER TO TYPICAL BACKFILL DETAIL FOR MATERIAL REQUIRED.

2 2/3" x 1/2" CORRUGATION - STEEL AND ALUMINUM CMP EDGE SPACING EQUAL ON BOTH SIDES

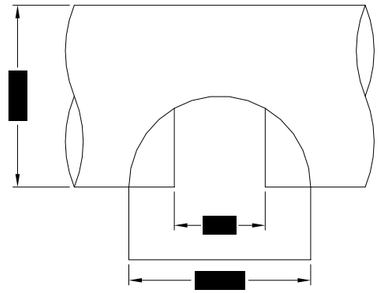


OPEN AREA = 3.76 SQ IN/SQ FT

3" x 1" CORRUGATION - STEEL AND ALUMINUM CMP (COIL PROVIDED FROM CONTECH LANTANA, FL PLANT)

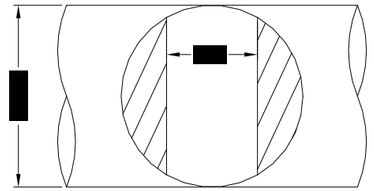
OPEN AREA = 4.16 SQ IN/SQ FT

5" x 1" CORRUGATION - STEEL ONLY
EDGE SPACING EQUAL ON BOTH SIDES



OPEN AREA = 3.33 SQ IN/SQ FT

NOTES:



1. PERFORATIONS MEET AASHTO AND ASTM SPECIFICATIONS.
2. PERFORATION OPEN AREA PER SQUARE FOOT OF PIPE IS BASED ON THE NOMINAL DIAMETER AND LENGTH OF PIPE.
3. ALL DIMENSIONS ARE SUBJECT TO MANUFACTURING TOLERANCES.
4. ALL HOLES ⌀3/8".

CONSTRUCTION LOADS

FOR TEMPORARY CONSTRUCTION VEHICLE LOADS, AN EXTRA AMOUNT OF COMPACTED COVER MAY BE REQUIRED OVER THE TOP OF THE PIPE. THE HEIGHT-OF-COVER SHALL MEET THE MINIMUM REQUIREMENTS SHOWN IN THE TABLE BELOW. THE USE OF HEAVY CONSTRUCTION EQUIPMENT NECESSITATES GREATER PROTECTION FOR THE PIPE THAN FINISHED GRADE COVER MINIMUMS FOR NORMAL HIGHWAY TRAFFIC.

PIPE SPAN, INCHES	AXLE LOADS (kips)			
	18-50	50-75	75-110	110-150
	MINIMUM COVER (FT)			
12-42	2.0	2.5	3.0	3.0
48-72	3.0	3.0	3.5	4.0
78-120	3.0	3.5	4.0	4.0
126-144	3.5	4.0	4.5	4.5

*MINIMUM COVER MAY VARY, DEPENDING ON LOCAL CONDITIONS. THE CONTRACTOR MUST PROVIDE THE ADDITIONAL COVER REQUIRED TO AVOID DAMAGE TO THE PIPE. MINIMUM COVER IS MEASURED FROM THE TOP OF THE PIPE TO THE TOP OF THE MAINTAINED CONSTRUCTION ROADWAY SURFACE.

CONSTRUCTION LOADING DIAGRAM

SCALE: N.T.S.

SPECIFICATION FOR DESIGNED DETENTION SYSTEM:

SCOPE
THIS SPECIFICATION COVERS THE MANUFACTURE AND INSTALLATION OF THE DESIGNED DETENTION SYSTEM DETAILED IN THE PROJECT PLANS.

MATERIAL
THE MATERIAL SHALL CONFORM TO THE APPLICABLE REQUIREMENTS LISTED BELOW:

ALUMINIZED TYPE 2 STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-274 OR ASTM A-92.

THE GALVANIZED STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-218 OR ASTM A-929.

THE POLYMER COATED STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-246 OR ASTM A-742.

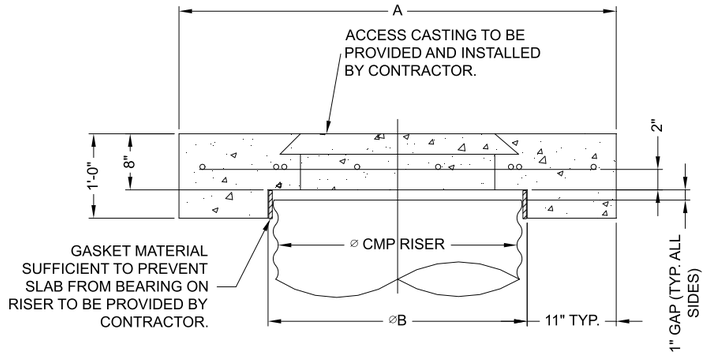
THE ALUMINUM COILS SHALL CONFORM TO THE APPLICABLE OF AASHTO M-197 OR ASTM B-744.

CONSTRUCTION LOADS
CONSTRUCTION LOADS MAY BE HIGHER THAN FINAL LOADS. FOLLOW THE MANUFACTURER'S OR NCSPA GUIDELINES.

PIPE
THE PIPE SHALL BE MANUFACTURED IN ACCORDANCE TO THE APPLICABLE REQUIREMENTS LISTED BELOW:

ALUMINIZED TYPE 2: AASHTO M-36 OR ASTM A-760

GALVANIZED: AASHTO M-36 OR ASTM A-760

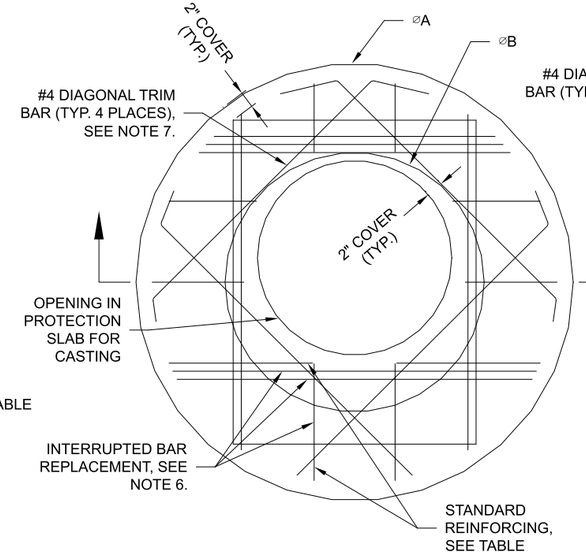


APPLICABLE POLYMER COATED: AASHTO M-245 OR ASTM A-762

ALUMINUM: AASHTO M-196 OR ASTM B-745

APPLICABLE
HANDLING AND ASSEMBLY
SHALL BE IN ACCORDANCE WITH NCSP'S (NATIONAL CORRUGATED STEEL PIPE ASSOCIATION) FOR ALUMINIZED TYPE 2, GALVANIZED OR POLYMER COATED STEEL. SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS FOR ALUMINUM PIPE.
REQUIREMENTS
INSTALLATION
SHALL BE IN ACCORDANCE WITH AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, SECTION 26, DIVISION II DIVISION II OR ASTM A-798 (FOR ALUMINIZED TYPE 2, GALVANIZED OR POLYMER COATED STEEL) OR ASTM B-788 (FOR ALUMINUM PIPE) AND IN CONFORMANCE WITH THE PROJECT PLANS AND SPECIFICATIONS. IF THERE ARE ANY INCONSISTENCIES OR CONFLICTS THE CONTRACTOR SHOULD DISCUSS AND RESOLVE WITH THE SITE ENGINEER.

IT IS ALWAYS THE RESPONSIBILITY OF THE CONTRACTOR TO FOLLOW OSHA GUIDELINES FOR SAFE PRACTICES.



NOTE:
THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

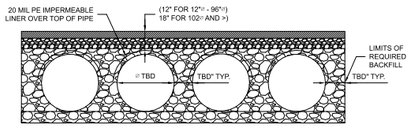
CMP DETENTION INSTALLATION GUIDE

PROPER INSTALLATION OF A FLEXIBLE UNDERGROUND DETENTION SYSTEM WILL ENSURE LONG-TERM PERFORMANCE. THE CONFIGURATION OF THESE SYSTEMS OFTEN REQUIRES SPECIAL CONSTRUCTION PRACTICES THAT DIFFER FROM CONVENTIONAL FLEXIBLE PIPE CONSTRUCTION. CONTECH ENGINEERED SOLUTIONS STRONGLY SUGGESTS SCHEDULING A PRE-CONSTRUCTION MEETING WITH YOUR LOCAL SALES ENGINEER TO DETERMINE IF ADDITIONAL MEASURES, NOT COVERED IN THIS GUIDE, ARE APPROPRIATE FOR YOUR SITE.

FOUNDATION

CONSTRUCT A FOUNDATION THAT CAN SUPPORT THE DESIGN LOADING APPLIED BY THE PIPE AND ADJACENT BACKFILL WEIGHT AS WELL AS MAINTAIN ITS INTEGRITY DURING CONSTRUCTION.

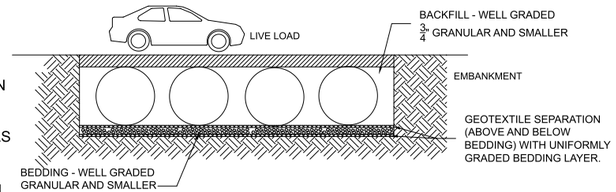
IF SOFT OR UNSUITABLE SOILS ARE ENCOUNTERED, REMOVE THE POOR SOILS DOWN TO A SUITABLE DEPTH AND THEN BUILD UP TO THE APPROPRIATE ELEVATION WITH A COMPETENT BACKFILL MATERIAL. THE STRUCTURAL FILL MATERIAL GRADATION SHOULD NOT ALLOW THE MIGRATION OF FINES, WHICH CAN CAUSE SETTLEMENT OF THE DETENTION SYSTEM OR PAVEMENT ABOVE. IF THE STRUCTURAL FILL MATERIAL IS NOT COMPATIBLE WITH THE UNDERLYING SOILS AN ENGINEERING FABRIC SHOULD BE USED AS A SEPARATOR. IN SOME CASES, USING A STIFF REINFORCING GEOGRID REDUCES OVER EXCAVATION AND REPLACEMENT FILL QUANTITIES.



GRADE THE FOUNDATION SUBGRADE TO A UNIFORM OR SLIGHTLY SLOPING GRADE. IF THE SUBGRADE IS CLAY OR RELATIVELY NON-POROUS AND THE CONSTRUCTION SEQUENCE WILL LAST FOR AN EXTENDED PERIOD OF TIME, IT IS BEST TO SLOPE THE GRADE TO ONE END OF THE SYSTEM. THIS WILL ALLOW EXCESS WATER TO DRAIN QUICKLY, PREVENTING SATURATION OF THE SUBGRADE.

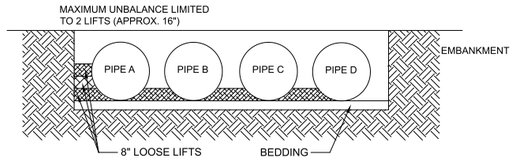
GEOMEMBRANE BARRIER

A SITE'S RESISTIVITY MAY CHANGE OVER TIME WHEN VARIOUS TYPES OF SALTING AGENTS ARE USED, SUCH AS ROAD SALTS FOR DEICING AGENTS. IF SALTING AGENTS ARE USED ON OR NEAR THE PROJECT SITE, A GEOMEMBRANE BARRIER IS RECOMMENDED WITH THE SYSTEM. THE GEOMEMBRANE LINER IS INTENDED TO HELP PROTECT THE SYSTEM FROM THE POTENTIAL ADVERSE EFFECTS THAT MAY RESULT FROM THE USE OF SUCH AGENTS INCLUDING PREMATURE CORROSION AND REDUCED ACTUAL SERVICE LIFE.



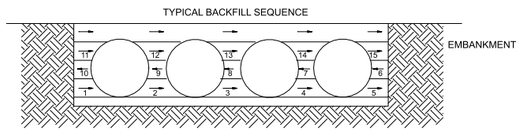
THE PROJECT'S ENGINEER OF RECORD IS TO EVALUATE WHETHER SALTING AGENTS WILL BE USED ON OR NEAR THE PROJECT SITE, AND USE HIS/HER BEST JUDGEMENT TO DETERMINE IF ANY ADDITIONAL PROTECTIVE MEASURES ARE REQUIRED. BELOW IS A TYPICAL DETAIL SHOWING THE PLACEMENT OF A GEOMEMBRANE BARRIER FOR PROJECTS WHERE SALTING AGENTS ARE USED ON OR NEAR THE PROJECT SITE.

IN-SITU TRENCH WALL



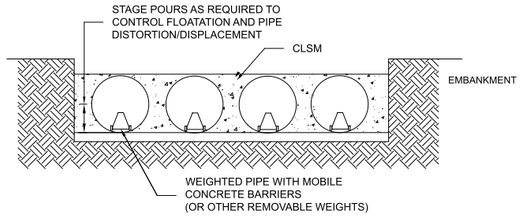
IF EXCAVATION IS REQUIRED, THE TRENCH WALL NEEDS TO BE CAPABLE OF SUPPORTING THE LOAD THAT THE PIPE SHEDS AS THE SYSTEM IS LOADED. IF SOILS ARE NOT CAPABLE OF SUPPORTING THESE LOADS, THE PIPE CAN DEFLECT. PERFORM A SIMPLE SOIL PRESSURE CHECK USING THE APPLIED LOADS TO DETERMINE THE LIMITS OF EXCAVATION BEYOND THE SPRING LINE OF THE OUTER MOST PIPES.

IN MOST CASES THE REQUIREMENTS FOR A SAFE WORK ENVIRONMENT AND PROPER BACKFILL PLACEMENT AND COMPACTION TAKE CARE OF THIS CONCERN.



BACKFILL PLACEMENT

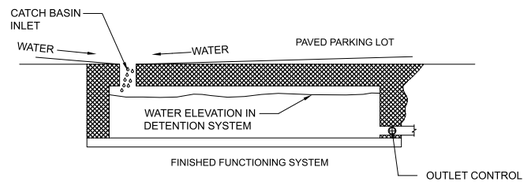
MATERIAL SHALL BE WORKED INTO THE PIPE HAUNCHES BY MEANS OF SHOVEL-SLICING, RODDING, AIR TAMPER, VIBRATORY ROD, OR OTHER EFFECTIVE METHODS.



IF AASHTO T99 PROCEDURES ARE DETERMINED INFEASIBLE BY THE GEOTECHNICAL ENGINEER OF RECORD, COMPACTION IS CONSIDERED ADEQUATE WHEN NO FURTHER YIELDING OF THE MATERIAL IS OBSERVED UNDER THE COMPACTOR, OR UNDER FOOT, AND THE GEOTECHNICAL ENGINEER OF RECORD (OR REPRESENTATIVE THEREOF) IS SATISFIED WITH THE LEVEL OF COMPACTION.

FOR LARGE SYSTEMS, CONVEYOR SYSTEMS, BACKHOES WITH LONG REACHES OR DRAGLINES WITH STONE BUCKETS MAY BE USED TO PLACE BACKFILL. ONCE MINIMUM COVER FOR CONSTRUCTION LOADING ACROSS THE ENTIRE WIDTH OF THE SYSTEM IS REACHED, ADVANCE THE EQUIPMENT TO THE END OF THE RECENTLY PLACED FILL, AND BEGIN THE SEQUENCE AGAIN UNTIL THE SYSTEM IS COMPLETELY BACKFILLED. THIS TYPE OF CONSTRUCTION SEQUENCE PROVIDES ROOM FOR STOCKPILED BACKFILL DIRECTLY BEHIND THE BACKHOE, AS WELL AS THE MOVEMENT OF CONSTRUCTION TRAFFIC. MATERIAL STOCKPILES ON TOP OF THE BACKFILLED DETENTION SYSTEM SHOULD BE LIMITED TO 8- TO 10-FEET HIGH AND MUST PROVIDE BALANCED LOADING ACROSS ALL BARRELS. TO DETERMINE THE PROPER COVER OVER THE PIPES TO ALLOW THE MOVEMENT OF CONSTRUCTION EQUIPMENT SEE TABLE 1, OR CONTACT YOUR LOCAL CONTECH SALES ENGINEER.

WHEN FLOWABLE FILL IS USED, YOU MUST PREVENT PIPE FLOATATION. TYPICALLY, SMALL LIFTS ARE PLACED BETWEEN THE PIPES AND THEN ALLOWED TO SET-UP PRIOR TO THE PLACEMENT OF THE NEXT LIFT. THE ALLOWABLE THICKNESS OF THE CLSM LIFT IS A FUNCTION OF A PROPER BALANCE BETWEEN THE UPLIFT FORCE OF THE CLSM, THE OPPOSING WEIGHT OF THE PIPE, AND THE EFFECT OF OTHER RESTRAINING MEASURES. THE PIPE CAN CARRY LIMITED FLUID PRESSURE WITHOUT PIPE DISTORTION OR DISPLACEMENT, WHICH ALSO AFFECTS THE CLSM LIFT THICKNESS. YOUR LOCAL CONTECH SALES ENGINEER CAN HELP DETERMINE THE PROPER LIFT THICKNESS.



CONSTRUCTION LOADING

TYPICALLY, THE MINIMUM COVER SPECIFIED FOR A PROJECT ASSUMES H-20 LIVE LOAD. BECAUSE CONSTRUCTION LOADS OFTEN EXCEED DESIGN LIVE LOADS, INCREASED TEMPORARY MINIMUM COVER REQUIREMENTS ARE NECESSARY. SINCE CONSTRUCTION EQUIPMENT VARIES FROM JOB TO JOB, IT IS BEST TO ADDRESS EQUIPMENT SPECIFIC MINIMUM COVER REQUIREMENTS WITH YOUR LOCAL CONTECH SALES ENGINEER DURING YOUR PRE-CONSTRUCTION MEETING.

ADDITIONAL CONSIDERATIONS

BECAUSE MOST SYSTEMS ARE CONSTRUCTED BELOW-GRADE, RAINFALL CAN RAPIDLY FILL THE EXCAVATION; POTENTIALLY CAUSING FLOATATION AND MOVEMENT OF THE PREVIOUSLY PLACED PIPES. TO HELP MITIGATE POTENTIAL PROBLEMS, IT IS BEST TO START THE INSTALLATION AT THE DOWNSTREAM END WITH THE OUTLET ALREADY CONSTRUCTED TO ALLOW A ROUTE FOR THE WATER TO ESCAPE. TEMPORARY DIVERSION MEASURES MAY BE REQUIRED FOR HIGH FLOWS DUE TO THE RESTRICTED NATURE OF THE OUTLET PIPE.

CMP DETENTION SYSTEM INSPECTION AND MAINTENANCE

UNDERGROUND STORMWATER DETENTION AND INFILTRATION SYSTEMS MUST BE INSPECTED AND MAINTAINED AT REGULAR INTERVALS FOR PURPOSES OF PERFORMANCE AND LONGEVITY.

INSPECTION

INSPECTION IS THE KEY TO EFFECTIVE MAINTENANCE OF CMP DETENTION SYSTEMS AND IS EASILY PERFORMED. CONTECH RECOMMENDS ONGOING, ANNUAL INSPECTIONS. SITES WITH HIGH TRASH LOAD OR SMALL OUTLET CONTROL ORIFICES MAY NEED MORE FREQUENT INSPECTIONS. THE RATE AT WHICH THE SYSTEM COLLECTS POLLUTANTS WILL DEPEND MORE ON SITE SPECIFIC ACTIVITIES RATHER THAN THE SIZE OR CONFIGURATION OF THE SYSTEM.

INSPECTIONS SHOULD BE PERFORMED MORE OFTEN IN EQUIPMENT WASHDOWN AREAS, IN CLIMATES WHERE SANDING AND/OR SALTING OPERATIONS TAKE PLACE, AND IN OTHER VARIOUS INSTANCES IN WHICH ONE WOULD EXPECT HIGHER ACCUMULATIONS OF SEDIMENT OR ABRASIVE/ CORROSIVE CONDITIONS. A RECORD OF EACH INSPECTION IS TO BE MAINTAINED FOR THE LIFE OF THE SYSTEM

MAINTENANCE

CMP DETENTION SYSTEMS SHOULD BE CLEANED WHEN AN INSPECTION REVEALS ACCUMULATED SEDIMENT OR TRASH IS CLOGGING THE DISCHARGE ORIFICE.

ACCUMULATED SEDIMENT AND TRASH CAN TYPICALLY BE EVACUATED THROUGH THE MANHOLE OVER THE OUTLET ORIFICE. IF MAINTENANCE IS NOT PERFORMED AS RECOMMENDED, SEDIMENT AND TRASH MAY ACCUMULATE IN FRONT OF THE OUTLET ORIFICE. MANHOLE COVERS SHOULD BE SECURELY SEATED FOLLOWING CLEANING ACTIVITIES. CONTECH SUGGESTS THAT ALL SYSTEMS BE DESIGNED WITH AN ACCESS/INSPECTION MANHOLE SITUATED AT OR NEAR THE INLET AND THE OUTLET ORIFICE. SHOULD IT BE NECESSARY TO GET INSIDE THE SYSTEM TO PERFORM MAINTENANCE ACTIVITIES, ALL APPROPRIATE PRECAUTIONS REGARDING CONFINED SPACE ENTRY AND OSHA REGULATIONS SHOULD BE FOLLOWED.

ANNUAL INSPECTIONS ARE BEST PRACTICE FOR ALL UNDERGROUND SYSTEMS. DURING THIS INSPECTION, IF EVIDENCE OF SALTING/DE-ICING AGENTS IS OBSERVED WITHIN THE SYSTEM, IT IS BEST PRACTICE FOR THE SYSTEM TO BE RINSED, INCLUDING ABOVE THE SPRING LINE SOON AFTER THE SPRING THAW AS PART OF THE MAINTENANCE PROGRAM FOR THE SYSTEM.

MAINTAINING AN UNDERGROUND DETENTION OR INFILTRATION SYSTEM IS EASIEST WHEN THERE IS NO FLOW ENTERING THE SYSTEM. FOR THIS REASON, IT IS A GOOD IDEA TO SCHEDULE THE CLEANOUT DURING DRY WEATHER.

THE FOREGOING INSPECTION AND MAINTENANCE EFFORTS HELP ENSURE UNDERGROUND PIPE SYSTEMS USED FOR STORMWATER STORAGE CONTINUE TO FUNCTION AS INTENDED BY IDENTIFYING RECOMMENDED REGULAR INSPECTION AND MAINTENANCE PRACTICES. INSPECTION AND MAINTENANCE RELATED TO THE STRUCTURAL INTEGRITY OF THE PIPE OR THE SOUNDNESS OF PIPE JOINT CONNECTIONS IS BEYOND THE SCOPE OF THIS GUIDE.

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S (DISTRICT) M.O.U. STANDARD SPECIFICATIONS DATED MARCH 2020 AND DISTRICT STANDARD DRAWINGS. FOR THE LATEST STANDARD DRAWINGS, PLEASE REFER TO THE "ENGINEERING TOOLS" PAGE FOUND ON THE "BUSINESS" SECTION OF THE DISTRICT'S WEBSITE.
2. CONTACT THE ENCROACHMENT PERMIT ENGINEER AT 951.955.1266 IF AN ENCROACHMENT PERMIT IS REQUIRED FROM THE DISTRICT. AFTER THE PERMIT IS ISSUED, THE DISTRICT MUST BE NOTIFIED ONE (1) WEEK PRIOR TO CONSTRUCTION.
3. CONTACT CONSTRUCTION MANAGEMENT AT 951.955.1288 IF CONSTRUCTION INSPECTION WILL BE PERFORMED BY THE DISTRICT. THE DISTRICT MUST BE NOTIFIED TWENTY (20) DAYS PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPES REFER TO THE CENTERLINE INTERSECTION STATIONS.
6. FORTY-EIGHT (48) HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT AT 1.800.227.2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON THE NORTH AMERICAN VERTICAL DATUM (NAVD 88).
8. ALL COORDINATES ARE SHOWN IN FEET AND DECIMALS THEREOF BASED ON THE NORTH AMERICAN DATUM (NAD 83), CALIFORNIA COORDINATE SYSTEM (CCS), ZONE 6 AND EPOCH 2019.30.
9. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
10. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
11. UNLESS OTHERWISE SPECIFIED, MINIMUM STREET RECONSTRUCTION SHALL BE 4" TYPE "A" HOT MIX ASPHALT OVER 6" CLASS 2 AGGREGATE BASE OR AS SPECIFIED BY THE ENGINEER.
12. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
13. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
14. PIPE BEDDING SHALL CONFORM TO DISTRICT STANDARD DRAWING NO. M815.
15. BH-1 INDICATES SOIL BORING LOCATIONS BASED ON THE SOILS REPORT DATED 9/2014. LOCATIONS SHOWN ARE APPROXIMATE.
16. "V" IS THE DEPTH OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
17. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
18. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS ARE TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
19. STANDARD DRAWINGS CALLED FOR ON THE PLAN AND PROFILE SHALL CONFORM TO DISTRICT STANDARD DRAWINGS UNLESS NOTED OTHERWISE.
20. THE CONTRACTOR IS REQUIRED TO CALL ALL UTILITY AGENCIES REGARDING TEMPORARY SHORING AND SUPPORT REQUIREMENTS FOR THE VARIOUS UTILITY LINES SHOWN ON THESE PLANS.
21. DURING ROUGH GRADING OPERATIONS AND PRIOR TO CONSTRUCTION OF PERMANENT DRAINAGE STRUCTURES, TEMPORARY DRAINAGE CONTROL SHOULD BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES.
22. APPROVAL OF THESE PLANS BY DISTRICT DOES NOT RELIEVE THE DEVELOPER'S ENGINEER OF RESPONSIBILITY FOR THE ENGINEERING DESIGN. IF FIELD CHANGES ARE REQUIRED, IT WILL BE THE RESPONSIBILITY OF THE DESIGN ENGINEER TO MAKE THE NECESSARY CORRECTIONS.
23. THE CONTRACTOR OR DEVELOPER SHALL SECURE ALL REQUIRED ENCROACHMENT AND/OR STATE AND FEDERAL REGULATORY PERMITS PRIOR TO THE COMMENCEMENT OF ANY WORK.
24. THE CONCRETE COATING ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES AND STRUCTURES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1-1/2" OVER THE REINFORCING STEEL AND INCREASED TO A MINIMUM OF 3 1/2" OVER REINFORCING STEEL FOR BOX CULVERT, WHEN DESIGN VELOCITIES EXCEED 20' PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE F'C=5,000 PSI FOR VELOCITIES EXCEEDING 20' PER SECOND AND F'C=6,000 PSI FOR VELOCITIES EXCEEDING 30' PER SECOND.
25. CONSTRUCTION JOINTS FOR CALTRANS STANDARD REINFORCED CONCRETE BOX SHALL BE PLACED ACCORDING TO DISTRICT STANDARD DRAWING NO. BOX 401.
26. ROCK FOR ACCESS ROADS, TURN AROUNDS AND OTHER AREAS WITHIN DISTRICT RIGHT OF WAY AS SHOWN ON THE PROJECT DRAWINGS AND AS DIRECTED BY THE ENGINEER SHALL MEET THE REQUIREMENTS FOR 1" X NO. 4 COARSE AGGREGATE AS PER SECTION 90-1.02C(4)(B) OF THE CALTRANS SPECIFICATIONS. X VALUES FOR ROCK GRADATION SHALL BE 75 AND 15 FOR 3/4" AND 3/8" RESPECTIVELY. ROCK SHALL ADDITIONALLY MEET THE SPREADING AND COMPACTION REQUIREMENTS OF SECTIONS 26-1.03D AND 26-1.03E OF THE CALTRANS SPECIFICATIONS. FURTHERMORE, ROCK DEPTH SHALL NOT EXCEED 3" AND SHALL BE SUBJECT TO APPROVAL BY THE ENGINEER. ROCK SHALL NOT CONTAIN RECYCLED CONCRETE PRODUCTS.

NOTICE TO CONTRACTOR

IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION AND ELEVATION OF THE EXISTING FACILITIES PRIOR TO THE START OF ANY CONSTRUCTION.

GENERAL NOTES

1. THE CONTRACTOR SHALL CONSTRUCT THE FLOOD CONTROL IMPROVEMENTS SHOWN ON THE DRAWINGS IN CONFORMANCE WITH THE REQUIREMENTS OF THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT'S M.O.U STANDARD SPECIFICATIONS DATED MARCH 2020, AND THE DISTRICT'S STANDARD MANUAL. FOR THE LATEST DRAWINGS OF THE STANDARD MANUAL, PLEASE REFER TO THE "PUBLICATIONS AND RECORDS" PAGE FOUND ON THE DISTRICT'S WEBSITE.
2. CONTACT THE ENCROACHMENT PERMIT ENGINEER AT 951.955.1266 IF AN ENCROACHMENT PERMIT IS REQUIRED FROM THE DISTRICT. AFTER THE PERMIT IS ISSUED THE DISTRICT MUST BE NOTIFIED ONE WEEK PRIOR TO CONSTRUCTION.
3. CONTACT CONSTRUCTION MANAGEMENT AT 951.955.1288 IF CONSTRUCTION INSPECTION WILL BE PERFORMED BY THE DISTRICT. THE DISTRICT MUST BE NOTIFIED TWENTY DAYS (20) PRIOR TO CONSTRUCTION.
4. ALL STATIONING REFERS TO CENTERLINE OF CONSTRUCTION UNLESS OTHERWISE NOTED.
5. STATIONING FOR LATERALS AND CONNECTOR PIPE REFER TO THE CENTERLINE INTERSECTION STATIONS.
6. FORTY–EIGHT HOURS BEFORE EXCAVATION, CALL UNDERGROUND SERVICE ALERT 1.800.227.2600.
7. ALL ELEVATIONS SHOWN ARE IN FEET AND DECIMALS THEREOF BASED ON THE NATIONAL GEODETIC VERTICAL DATUM (NAVD 88).
8. ALL COORDINATES ARE SHOWN IN FEET AND DECIMALS THEREOF BASED ON AN ASSUMED COORDINATE SYSTEM.
9. ALL CROSS SECTIONS ARE TAKEN LOOKING DOWNSTREAM.
10. ELEVATIONS OF UTILITIES ARE APPROXIMATE UNLESS OTHERWISE NOTED.
11. UNLESS OTHERWISE SPECIFIED, MINIMUM STREET RECONSTRUCTION SHALL BE 4" TYPE "A" HOT MIX ASPHALT OVER 6" CLASS 2 AGGREGATE BASE OR AS SPECIFIED BY THE ENGINEER.
12. OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES TO BE ABANDONED SHALL BE SEALED WITH 6" OF CLASS "B" CONCRETE.
13. PIPE CONNECTED TO THE MAINLINE PIPE SHALL CONFORM TO JUNCTION STRUCTURE NO. 4 (JS 229) UNLESS OTHERWISE NOTED.
14. PIPE BEDDING SHALL CONFORM TO THE DISTRICTS STANDARD DRAWING NO. M815
15. "V" IS THE DEPTH OF CATCH BASINS MEASURED FROM THE TOP OF CURB TO INVERT OF CONNECTOR PIPE.
16. CATCH BASINS SHALL BE LOCATED SO THAT LOCAL DEPRESSION SHALL BEGIN AT EXISTING CURB RETURN JOINT, UNLESS OTHERWISE SPECIFIED.
17. ALL CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED IN KIND AND AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS UNLESS OTHERWISE NOTED.
18. STANDARD DRAWINGS CALLED FOR ON THE PLAN AND PROFILE SHALL CONFORM TO DISTRICT STANDARD DRAWINGS UNLESS NOTED OTHERWISE.
19. THE CONTRACTOR IS REQUIRED TO CALL ALL UTILITY AGENCIES REGARDING TEMPORARY SHORING AND SUPPORT REQUIREMENTS FOR THE VARIOUS UTILITY LINES SHOWN ON THESE PLANS.
20. DURING ROUGH GRADING OPERATIONS AND PRIOR TO CONSTRUCTION OF PERMANENT DRAINAGE STRUCTURES, TEMPORARY DRAINAGE CONTROL SHOULD BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES.
21. APPROVAL OF THESE PLANS BY THE DISTRICT DOES NOT RELIEVE THE DEVELOPER'S ENGINEER OF RESPONSIBILITY FOR THE ENGINEERING DESIGN. IF FIELD CHANGES ARE REQUIRED, IT WILL BE THE RESPONSIBILITY OF THE DESIGN ENGINEER TO MAKE THE NECESSARY CORRECTIONS.
22. THE CONTRACTOR OR DEVELOPER SHALL SECURE ALL REQUIRED ENCROACHMENT AND/OR STATE AND FEDERAL REGULATORY PERMITS PRIOR TO THE COMMENCEMENT OF ANY WORK.
23. THE CONCRETE COATING ON THE INSIDE OF ALL REINFORCED CONCRETE PIPES OR STRUCTURES MUST BE INCREASED TO PROVIDE A MINIMUM OF 1–1/2 INCHES OVER THE REINFORCING AND INCREASED TO A MINIMUM OF 3–1/2 INCHES OVER REINFORCING FOR BOX CULVERT, WHEN DESIGN VELOCITIES EXCEED 20 FEET PER SECOND. THE CONCRETE DESIGN STRENGTH IN THESE REACHES SHALL BE F'C=5,000 PSI FOR VELOCITIES EXCEEDING 20 FEET PER SECOND AND F'C=6,000 PSI FOR VELOCITIES EXCEEDING 30 FEET PER SECOND.
24. CONSTRUCTION JOINTS FOR CALTRANS STANDARD REINFORCED CONCRETE BOX SHALL BE PLACED ACCORDING TO THE DISTRICT STANDARD DRAWING NO. BOX 401.
25. TWO HYDRAULIC GRADE LINES ARE SHOWN ON THE STORM DRAIN PROFILE FOR REFERENCE. REFLECTING THE RATIONAL METHOD CALCULATED FLOWS AND THE PRORATED FLOWS FROM THE MASTER DRAINAGE PLAN.

1. PURPOSE AND SCOPE

This report provides the results of our recent percolation feasibility study for the proposed Tilt-up Commercial structure. The purpose of the study is to present the results of the field evaluation for the infiltration rate for the storm water runoff at the subject property.

Peculation test was conducted in accordance with **ASTM D 3385 "STANDARD TEST METHOD FOR INFILTRATION RATE OF SOILS IN FIELD USING DOUBLE-RING INFILTROMETER".** Two (2) locations have been designated to conduct the percolation test procedure. Please review the "Site Location Plan" Figure No.1 to review the approximate percolation tests location. The main purpose of multiple-locations is to obtain additional infiltration rates.

2. SUBSURFACE EXPLORATION

Percolation test No.1 was conducted next to Boring No.6 and Percolation No.2 was performed adjacent to the Boring No.5. For percolation, No.1 Test Pit No.1 was excavated to an approximate depth of 80 inches below the existing grade. Test pit Number 2, which was excavated for per was excavated to an approximate depth of 84 inches below the existing grade. Both two test pits were excavated with the help of backhoe and field equipment. The exposed subgrade within both locations were saturated 24-hours prior to actual percolation test.

3. SUBSURFACE CONDITION

The subsurface soil encountered in Test Pit No 1 (TP-1) consisted of Brown Silty Fine to Coarse Sand, Trace Clay Alluvial Deposits (Qof) Dry to damp to the depth of about 18 inches, which was underlain by Orange Silty Fine Sand with Clay to Clayey Fine Sand, Alluvial Deposits (Qof) to the depth of 8 feet. The samples were obtain by the help of the hand auger and field equipment and it was obtained at the corner of test pit, where the percolation had been performed.

2511 west La Palma Avenue, Suite E
Anaheim, CA, (714) 995-9001

In case of Test pit No 2 (TP-2), Soil classified as Brown Silty Fine to Coarse Sand, Trace Clay

Alluvial Deposits (Qof), Dry to damp and dense. This layer was continued to the depth of 3 feet. Then after that we observed Cemented soil with CALICHE, Alluvial Deposit (Qof) and moist which was very dense as well

Detailed geotechnical subsurface condition was originally discussed in our original geotechnical report (G-021422), which was prepared as Proposed Tilt up.

According to attached figure 6, the subject site is not located within a "Liquefaction Zone" based on the review of the liquefaction map of California (California Department of Conservation). Also there is no evidence of near-surface groundwater in our subsurface exploration. Within Test Pit No.1 and 2 there was no groundwater encountered to maximum explored depth.

4. GEOTECHNICAL CONSIDERATIONS

The followings were considered prior to test procedure. :

1. Water infiltration into the ground should be at least 10 feet above the groundwater table.
2. The distance between the infiltration facility and the adjacent private property lines should be at least 10 feet.
3. The minimum foundation set back should be at least 10 feet from the infiltration facility.

4. Test Procedure

The double ring infiltrometer test (ASTM D 3385) is a well recognized and documented technique for directly measuring the soil infiltration rate of a site. Double ring infiltration was developed in response to the fact that smaller (less than 40 inch diameter) single ring infiltrometers tend to overestimate vertical infiltration rates. This has been attributed to the fact that the flow of water beneath the cylinder is not purely vertical and diverges laterally.

2511 west La Palma Avenue, Suite E

Anaheim, CA, (714) 995-9001

Double ring infiltrometers minimize the error associated with the single-ring method because the water level in the outer ring forces vertical infiltration of water in the inner ring. Care should be taken when driving the rings into the ground as there can be a poor connection between the ring wall and the soil. This poor connection can cause a leakage of water along the ring wall and an overestimation of the infiltration rate. Another potential source of error is attributed to the size of the cylinders. As such, the use of cylinder sizes less than those prescribed in ASTM D 3385 is not recommended by most codes.

Geo Environmental Resources, double ring infiltrometer consists of a 12-inch inner ring and a 24-inch outer ring. While there are two operational techniques used with the double-ring infiltrometer, the constant head method and the falling head method; ASTM D3385 mandates the use of the constant head method.

With the constant head method, water is consistently added to both the outer and inner rings to maintain a constant level throughout the testing. The volume of water needed to maintain the fixed level of the inner ring is measured. To help maintain a constant head, a variety of devices may be used. A hook gauge, steel tape or rule, or length of steel or plastic rod pointed on one end, can be used for measuring and controlling the depth of liquid (head) in the infiltrometer ring. If available, a graduated Mariotte tube or automatic flow control system may also be used.

On the other hand and with the falling head method, which has been used in this report, the falling level of the water is measured in each time interval and ultimately, as shown in following tables, a final report shall be provided and, based on the test results, an infiltration rate shall be recommended. The final number is average of previous 4-infiltration rate.

2511 west La Palma Avenue, Suite E
Anaheim, CA, (714) 995-9001

5. FINDINGS AND CONCLUSIONS

Result of Percolation test **No.1 indicates 5.25 inch/hr.** with a percolation **No.2 indicating 4.7 inch/hr.** Attached please see percolation tables and graphs.

($\boldsymbol{Final\ Infiltration\ rate} = \frac{\boldsymbol{Infiltration\ rate\ from\ test}}{\boldsymbol{Factor\ of\ safety}}$) **The minimum recommended factor of safety will be two (2).** Therefore, the actual infiltration rate of subject property will be half of the obtained infiltration rate**.**

It is our opinion that due the variability within the near-surface soil, the lower infiltration rate (Infiltration No.2) should be considered to utilize in the design. Therefore, the recommended infiltration rate is 2.35 Inch/hr.

1. The infiltration of the storm water will not result in ground settlement that could affect adversely the proposed structure.
2. All results and findings are based on level (Horizontal) surface area. Effect of any slope or inclination shall be considered to evaluate the final Percolation rate.
3. The proposed infiltration facility should be designed in such way that in case of "Drainage Capacity Failure" overflow to street.

A Brief Introduction

This Project-Specific WQMP Template for the **Santa Ana Region** has been prepared to help guide you in documenting compliance for your project. Because this document has been designed to specifically document compliance, you will need to utilize the WQMP Guidance Document as your "how-to" manual to help guide you through this process. Both the Template and Guidance Document go hand-in-hand, and will help facilitate a well-prepared Project-Specific WQMP. Below is a flowchart for the layout of this Template that will provide the steps required to document compliance.

OWNER'S CERTIFICATION

This Project-Specific Water Quality Management Plan (WQMP) has been prepared by Armstrong and Brooks Consulting Engineers for Thrifty Oil Company for their Tobacco Road project.

This WQMP is intended to comply with the requirements of the Riverside County 2010 SAR MS4 Permit and Riverside County Municipal Code Section XII.D which includes the requirement for the preparation and implementation of a Project-Specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. In addition, the property owner accepts responsibility for interim operation and maintenance of Stormwater BMPs until such time as this responsibility is formally transferred to a subsequent owner. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity. The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under Riverside County Water Quality Ordinance Order No. R8-2010-0033 (MS4 Permit).

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

Section A: Project and Site Information

PROJECT INFORMATION		
Type of Project:	Industrial	
Planning Area:	Mead Valley Area Plan I-P Zone (Industrial Park)	
Community Name:	N/A	
Development Name:	N/A	
PROJECT LOCATION		
Latitude & Longitude (DMS): 33°49'19" N, 117°14'58" W		
Project Watershed and Sub-Watershed: Santa Ana Watershed		
Gross Acres: 9.14 acres APN(s): 317-260-017, 317-260-018 Map Book and Page No.: MB 1/5		
PROJECT CHARACTERISTICS		
Proposed or Potential Land Use(s)	Warehouse	
Proposed or Potential SIC Code(s)	4225	
Area of Impervious Project Footprint (SF)	379,819	
Total Area of proposed Impervious Surfaces within the Project Footprint (SF)/or Replacement	323,229	
Does the project consist of offsite road improvements?	☒ Y	☐ N
Does the project propose to construct unpaved roads?	☐ Y	☒ N
Is the project part of a larger common plan of development (phased project)?	☒ Y	☒ N
EXISTING SITE CHARACTERISTICS		
Total area of existing Impervious Surfaces within the Project limits Footprint (SF)	0	
Is the project located within any MSHCP Criteria Cell?	☐ Y	☒ N
If so, identify the Cell number:	N/A	
Are there any natural hydrologic features on the project site?	☐ Y	☒ N
Is a Geotechnical Report attached?	☐ Y	☒ N
If no Geotech. Report, list the NRCS soils type(s) present on the site (A, B, C and/or D)		
What is the Water Quality Design Storm Depth for the project?	0.59 in	

A.1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the local vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a **minimum**, your WQMP Site Plan should include the following:

- Drainage Management Areas
- Proposed Structural BMPs
- Drainage Path
- Drainage Infrastructure, Inlets, Overflows
- Source Control BMPs
- Buildings, Roof Lines, Downspouts
- Impervious Surfaces
- Standard Labeling
- BMP Locations (Lat/Long)

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the Co-Permittee plan reviewer must be able to easily analyze your project utilizing this template and its associated site plans and maps.

A.2 Identify Receiving Waters

Using Table A.1 below, list in order of upstream to downstream, the receiving waters that the project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated beneficial uses, and proximity, if any, to a RARE beneficial use. Include a map of the receiving waters in Appendix 1.

Table A.1 Identification of Receiving Waters

Receiving Waters	EPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Perris Valley Drain	N/A	N/A	N/A
San Jacinto River Reach 3	None	AGR*,GWR*,REC1*,REC2*,WARM*,WILD*	N/A
San Jacinto River Reach 2	None	AGR,GWR,WILD,MUN,REC1,REC2,WARM	N/A
Canyon Lake (Railroad Canyon Reservoir)	Nutrients	WILD, REC2,WARM,GWR,MUN,REC1,AGR	N/A
San Jacinto River Reach 1	None	AGR*,GWR*,REC1*,REC2*,WARM*,WILD*	N/A
Lake Elsinore	DDT, Nutrients, Low Dissolved Oxygen, PCBs, Toxicity	REC1, REC2, WARM, WILD	N/A

Denotes **Intermittent Beneficial Use*

A.3 Additional Permits/Approvals required for the Project:

Table A.2 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☐ Y	☒ N
State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Cert.	☐ Y	☒ N
US Army Corps of Engineers, CWA Section 404 Permit	☐ Y	☒ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☐ Y	☒ N
Statewide Construction General Permit Coverage	☒ Y	☐ N
Statewide Industrial General Permit Coverage	☐ Y	☒ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☐ Y	☒ N
Other *(please list in the space below as required)*	☐ Y	☒ N

If yes is answered to any of the questions above, the Co-Permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section 'A' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your LID design and explain your design decisions to others.

The 2010 Santa Ana MS4 Permit further requires that LID Retention BMPs (Infiltration Only or Harvest and Use) be used unless it can be shown that those BMPs are infeasible. Therefore, it is important that your narrative identify and justify if there are any constraints that would prevent the use of those categories of LID BMPs. Similarly, you should also note opportunities that exist which will be utilized during project design. Upon completion of identifying Constraints and Opportunities, include these on your WQMP Site plan in Appendix 1.

Consideration of "highest and best use" of the discharge should also be considered. For example, Lake Elsinore is evaporating faster than runoff from natural precipitation can recharge it. Requiring infiltration of 85% of runoff events for projects tributary to Lake Elsinore would only exacerbate current water quality problems associated with Pollutant concentration due to lake water evaporation. In cases where rainfall events have low potential to recharge Lake Elsinore (i.e. no hydraulic connection between groundwater to Lake Elsinore, or other factors), requiring infiltration of Urban Runoff from projects is counterproductive to the overall watershed goals. Project proponents, in these cases, would be allowed to discharge Urban Runoff, provided they used equally effective filtration-based BMPs.

Site Optimization

The following questions are based upon Section 3.2 of the WQMP Guidance Document. Review of the WQMP Guidance Document will help you determine how best to optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

Did you identify and preserve existing drainage patterns? If so, how? If not, why?

Yes, based on topographical evidence the site currently drains easterly and the grading for the site mimics current site drainage. Proposed grading and proposed storm drains will allow for site runoff to be conveyed to a proposed underground retention chamber below the eastern truck parking lot. Excess runoff from this proposed facility will be discharged using an overflow pipe at a rate less than existing, predeveloped conditions.

Did you identify and protect existing vegetation? If so, how? If not, why?

No, a small percentage of the existing site is covered by vegetation making it infeasible to protect. Vegetation will be placed through proposed landscaping areas within proposed parking islands and alongside sidewalks.

Did you identify and preserve natural infiltration capacity? If so, how? If not, why?

Yes, infiltration capacity was estimated per attached Geotechnical Report for adjacent property and was used in determining the BMPs applied to the site.

Did you identify and minimize impervious area? If so, how? If not, why?

Yes, impervious area was minimized through the implementation of landscaped parking islands throughout the site instead of impervious asphalt/concrete.

Did you identify and disperse runoff to adjacent pervious areas? If so, how? If not, why?

No, however all site runoff will be routed to the underground detention chambers which will also infiltrate into the gravel bed.

Section C: Delineate Drainage Management Areas (DMAs)

Utilizing the procedure in Section 3.3 of the WQMP Guidance Document which discusses the methods of delineating and mapping your project site into individual DMAs, complete Table C.1 below to appropriately categorize the types of classification (e.g., Type A, Type B, etc.) per DMA for your project site. Upon completion of this table, this information will then be used to populate and tabulate the corresponding tables for their respective DMA classifications.

Table C.1 DMA Classifications

DMA Name or ID	Surface Type(s)[1][2]	Area (Sq. Ft.)	DMA Type
DMA A	Mixed	33,331	D
DMA B	Mixed	316,213	D
DMA C	Mixed	14,478	D
DMA D	Ornamental Landscape	15,682	A

[1]*Reference Table 2-1 in the WQMP Guidance Document to populate this column*
[2]*If multi-surface provide back-up*

Table C.2 Type 'A', Self-Treating Areas

DMA Name or ID	Area (Sq. Ft.)	Stabilization Type	Irrigation Type (if any)
DMA D	15,682	Landscaped	Drip

Table C.3 Type 'B', Self-Retaining Areas

Self-Retaining Area				**Type 'C' DMAs that are draining to the Self-Retaining Area**		
DMA Name/ ID	Post-project surface type	Area (square feet) [A]	Storm Depth (inches) [B]	DMA Name / ID	[C] from Table C.4 = [C]	Required Retention Depth (inches) [D]

$$[D] = [B] + \frac{[B] \cdot [C]}{[A]}$$

Table C.4 Type 'C', Areas that Drain to Self-Retaining Areas

DMA					Receiving Self-Retaining DMA		
DMA Name/ ID	Area (square feet)	Post-project surface type	Impervious fraction	Product	DMA name /ID	Area (square feet)	Ratio
	[A]		[B]	[C] = [A] x [B]		[D]	[C]/[D]

Table C.5 Type 'D', Areas Draining to BMPs

DMA Name or ID	BMP Name or ID
DMA A	INFILTRATION TRENCH #1
DMA B	UNDERGROUND INFILTRATION CHAMBER #1
DMA C	DRY WELL #1

Note: More than one drainage management area can drain to a single LID BMP, however, one drainage management area may not drain to more than one BMP.

Section D: Implement LID BMPs

D.1 Infiltration Applicability

Is there an approved downstream 'Highest and Best Use' for stormwater runoff (see discussion in Chapter 2.4.4 of the WQMP Guidance Document for further details)? ☐ Y ☒ N

If yes has been checked, Infiltration BMPs shall not be used for the site; proceed to section D.3

If no, continue working through this section to implement your LID BMPs. It is recommended that you contact your Co-Permittee to verify whether or not your project discharges to an approved downstream 'Highest and Best Use' feature.

Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the Copermittee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the Co-Permittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the WQMP Guidance Document. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Is this project classified as a small project consistent with the requirements of Chapter 2 of the WQMP Guidance Document? ☐ Y ☒ N

Infiltration Feasibility

Table D.1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the WQMP Guidance Document in Chapter 2.4.5. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D.1 Infiltration Feasibility

Does the project site…	YES	NO
…have any DMAs with a seasonal high groundwater mark shallower than 10 feet?		X
If Yes, list affected DMAs:		
…have any DMAs located within 100 feet of a water supply well?		X
If Yes, list affected DMAs:		
…have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater could have a negative impact?		X
If Yes, list affected DMAs:		
…have measured in-situ infiltration rates of less than 1.6 inches / hour?		X
If Yes, list affected DMAs:		
…have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final infiltration surface?		X
If Yes, list affected DMAs:		
…geotechnical report identify other site-specific factors that would preclude effective and safe infiltration?		X
Describe here:		

If you answered "Yes" to any of the questions above for any DMA, Infiltration BMPs should not be used for those DMAs and you should proceed to the assessment for Harvest and Use below.

D.2 Harvest and Use Assessment

Please check what applies*:*

☐ Reclaimed water will be used for the non-potable water demands for the project.

☐Downstream water rights may be impacted by Harvest and Use as approved by the Regional Board (verify with the Copermittee).

☒The Design Capture Volume will be addressed using Infiltration Only BMPs. In such a case, Harvest and Use BMPs are still encouraged, but it would not be required if the Design Capture Volume will be infiltrated or evapotranspired.

If any of the above boxes have been checked, Harvest and Use BMPs need not be assessed for the site. If none of the above criteria applies, follow the steps below to assess the feasibility of irrigation use, toilet use and other non-potable uses (e.g., industrial use).

Irrigation Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for Irrigation Use BMPs on your site:

Step 1: Identify the total area of irrigated landscape on the site, and the type of landscaping used.

Total Area of Irrigated Landscape:

Type of Landscaping (Conservation Design or Active Turf):

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for irrigation use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces:

Step 3: Cross reference the Design Storm depth for the project site (see Exhibit A of the WQMP Guidance Document) with the left column of Table 2-3 in Chapter 2 to determine the minimum area of Effective Irrigated Area per Tributary Impervious Area (EIATIA).

Enter your EIATIA factor:

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum irrigated area that would be required.

Minimum required irrigated area:

Step 5: Determine if harvesting stormwater runoff for irrigation use is feasible for the project by comparing the total area of irrigated landscape (Step 1) to the minimum required irrigated area (Step 4).

Minimum required irrigated area (Step 4)	Available Irrigated Landscape (Step 1)

Toilet Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for toilet flushing uses on your site:

Step 1: Identify the projected total number of daily toilet users during the wet season, and account for any periodic shut downs or other lapses in occupancy:

Projected Number of Daily Toilet Users:

Project Type:

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for toilet use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces:

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-2 in Chapter 2 to determine the minimum number or toilet users per tributary impervious acre (TUTIA).

Enter your TUTIA factor:

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of toilet users that would be required.

Minimum number of toilet users:

Step 5: Determine if harvesting stormwater runoff for toilet flushing use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

Minimum required Toilet Users (Step 4)	Projected number of toilet users (Step 1)

Other Non-Potable Use Feasibility

Are there other non-potable uses for stormwater runoff on the site (e.g. industrial use)? See Chapter 2 of the Guidance for further information. If yes, describe below. If no, write N/A.

N/A

Step 1: Identify the projected average daily non-potable demand, in gallons per day, during the wet season and accounting for any periodic shut downs or other lapses in occupancy or operation.

Average Daily Demand: N/A

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for the identified non-potable use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: N/A

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-4 in Chapter 2 to determine the minimum demand for non-potable uses per tributary impervious acre.

Enter the factor from Table 2-4: N/A

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of gallons per day of non-potable use that would be required.

Minimum required use: N/A

Step 5: Determine if harvesting stormwater runoff for other non-potable use is feasible for the project by comparing the projected average daily use (Step 1) to the minimum required non-potable use (Step 4).

Minimum required non-potable use (Step 4)	**Projected average daily use (Step 1)**
N/A	N/A

If Irrigation, Toilet and Other Use feasibility anticipated demands are less than the applicable minimum values, Harvest and Use BMPs are not required and you should proceed to utilize LID Bioretention and Biotreatment per Section 3.4.2 of the WQMP Guidance Document.

D.3 Bioretention and Biotreatment Assessment

Other LID Bioretention and Biotreatment BMPs as described in Chapter 2.4.7 of the WQMP Guidance Document are feasible on nearly all development sites with sufficient advance planning.

Select one of the following:

☐ LID Bioretention/Biotreatment BMPs will be used for some or all DMAs of the project as noted below in Section D.4 (note the requirements of Section 3.4.2 in the WQMP Guidance Document).

☐ A site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the Copermittee to discuss this option. Proceed to Section E to document your alternative compliance measures.

D.4 Feasibility Assessment Summaries

From the Infiltration, Harvest and Use, Bioretention and Biotreatment Sections above, complete Table D.2 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.

Table D.2 LID Prioritization Summary Matrix

DMA Name/ID	LID BMP Hierarchy				No LID (Alternative Compliance)
	1. Infiltration	2. Harvest and use	3. Bioretention	4. Biotreatment	
DMA A	☒	☐	☐	☐	☐
DMA B	☒	☐	☐	☐	☐
DMA C	☒	☐	☐	☐	☐
	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐
	☐	☐	☐	☐	☐

For those DMAs where LID BMPs are not feasible, provide a brief narrative below summarizing why they are not feasible, include your technical infeasibility criteria in Appendix 5, and proceed to Section E below to document Alternative Compliance measures for those DMAs. Recall that each proposed DMA must pass through the LID BMP hierarchy before alternative compliance measures may be considered.

D.5 LID BMP Sizing

Each LID BMP must be designed to ensure that the Design Capture Volume will be addressed by the selected BMPs. First**,** calculate the Design Capture Volume for each LID BMP using the V_{BMP} worksheet in Appendix F of the LID BMP Design Handbook. Second**,** design the LID BMP to meet the required V_{BMP} using a method approved by the Copermittee. Utilize the worksheets found in the LID BMP Design Handbook or consult with your Copermittee to assist you in correctly sizing your LID BMPs. Complete Table D.3 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D.3 DCV Calculations for LID BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	Design Storm Depth	Design Capture Volume, V_{BMP}	Proposed Volume on Plans
	[A]		[B]	[C]	[A] x [C]	(in)	(cubic feet)	(cubic feet)
DMA-A	*33,331*	*Mixed Surface Types*	*0.41**	*0.29*	*9,511.2*	*0.59*	*467.6*	*680*

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	Design Storm Depth	Design Capture Volume, V_{BMP}	Proposed Volume on Plans
	[A]		[B]	[C]	[A] x [C]	(in)	(cubic feet)	(cubic feet)
DMA-B	*316,213*	*Mixed Surface Types*	*0.95**	*0.81*	*255,176 .9*	*0.59*	*12,546.2*	*12,794*

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	Design Storm Depth	Design Capture Volume, V_{BMP}	Proposed Volume on Plans
	[A]		[B]	[C]	[A] x [C]	(in)	(cubic feet)	(cubic feet)
DMA-C	*14,478*	*Mixed Surface Types*	*0.88**	*0.7*	*10,160. 5*	*0.59*	*499.6*	*1,770*

** Per Section 2.3.1 of the 2012 Santa Watershed Region WQMP Guidance Document, a composite effective impervious fraction can be used when multiple surfaces types are present in a DMA. A composite effective impervious fraction has been used for DMA-A, DMA-B, and DMA-C. Proposed site grading will convey DMA-A flows to an infiltration trench. Sheet and concentrated flows from DMA-B will be conveyed to an underground retention chamber. DMA-C flows will concentrate at a dry well at the northeastern corner of the site.*

Section E: Alternative Compliance (LID Waiver Program)

LID BMPs are expected to be feasible on virtually all projects. Where LID BMPs have been demonstrated to be infeasible as documented in Section D, other Treatment Control BMPs must be used (subject to LID waiver approval by the Copermittee). Check one of the following Boxes:

☒ LID Principles and LID BMPs have been incorporated into the site design to fully address all Drainage Management Areas. No alternative compliance measures are required for this project and thus this Section is not required to be completed.

- *Or* -

☐ The following Drainage Management Areas are unable to be addressed using LID BMPs. A site-specific analysis demonstrating technical infeasibility of LID BMPs has been approved by the Co-Permittee and included in Appendix 5. Additionally, no downstream regional and/or sub-regional LID BMPs exist or are available for use by the project. The following alternative compliance measures on the following pages are being implemented to ensure that any pollutant loads expected to be discharged by not incorporating LID BMPs, are fully mitigated.

E.1 Identify Pollutants of Concern

Utilizing Table A.1 from Section A above which noted your project's receiving waters and their associated EPA approved 303(d) listed impairments, cross reference this information with that of your selected Priority Development Project Category in Table E.1 below. If the identified General Pollutant Categories are the same as those listed for your receiving waters, then these will be your Pollutants of Concern and the appropriate box or boxes will be checked on the last row. The purpose of this is to document compliance and to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs.

Table E.1 Potential Pollutants by Land Use Type

Priority Development Project Categories and/or Project Features (check those that apply)	General Pollutant Categories							
	Bacterial Indicators	Metals	Nutrients	Pesticides	Toxic Organic Compounds	Sediments	Trash & Debris	Oil & Grease
☐ Detached Residential Development	P	N	P	P	N	P	P	P
☐ Attached Residential Development	P	N	P	P	N	P	P	P(2)
☒ Commercial/Industrial Development	P(3)	P	P(1)	P(1)	P(5)	P(1)	P	P
☐ Automotive Repair Shops	N	P	N	N	P(4, 5)	N	P	P
☐ Restaurants (>5,000 ft^2)	P	N	N	N	N	N	P	P
☐ Hillside Development (>5,000 ft^2)	P	N	P	P	N	P	P	P
☒ Parking Lots (>5,000 ft^2)	P(6)	P	P(1)	P(1)	P(4)	P(1)	P	P
☐ Retail Gasoline Outlets	N	P	N	N	P	N	P	P
Project Priority Pollutant(s) of Concern	☒	☒	☐	☐	☒	☐	☒	☒

P = Potential

N = Not Potential

(1) A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected

(2) A potential Pollutant if the project includes uncovered parking areas; otherwise not expected

(3) A potential Pollutant is land use involving animal waste

(4) Specifically petroleum hydrocarbons

(5) Specifically solvents

(6) Bacterial indicators are routinely detected in pavement runoff

E.2 Stormwater Credits

Projects that cannot implement LID BMPs but nevertheless implement smart growth principles are potentially eligible for Stormwater Credits. Utilize Table 3-8 within the WQMP Guidance Document to identify your Project Category and its associated Water Quality Credit. If not applicable, write N/A.

Table E.2 Water Quality Credits

Qualifying Project Categories	Credit Percentage[2]
Total Credit Percentage[1]	

[1]Cannot Exceed 50%

[2]Obtain corresponding data from Table 3-8 in the WQMP Guidance Document

E.3 Sizing Criteria

After you appropriately considered Stormwater Credits for your project, utilize Table E.3 below to appropriately size them to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.2 of the WQMP Guidance Document for further information.

Table E.3 Treatment Control BMP Sizing

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Area x Runoff Factor		*Enter BMP Name / Identifier Here*		
	[A]		[B]	[C]	[A] x [C]				
						Design Storm Depth (in)	*Minimum Design Capture Volume or Design Flow Rate (cubic feet or cfs)*	*Total Storm Water Credit % Reduction*	*Proposed Volume or Flow on Plans (cubic feet or cfs)*
	A_T = Σ[A]				Σ= [D]	[E]	$[F] = \frac{[D]x[E]}{[G]}$	[F] X (1-[H])	[I]

[B], [C] is obtained as described in Section 2.3.1 from the WQMP Guidance Document

[E] is for Flow-Based Treatment Control BMPs [E] = .2, for Volume-Based Control Treatment BMPs, [E] obtained from Exhibit A in the WQMP Guidance Document

[G] is for Flow-Based Treatment Control BMPs [G] = 43,560, for Volume-Based Control Treatment BMPs, [G] = 12

[H] is from the Total Credit Percentage as Calculated from Table E.2 above

[I] as obtained from a design procedure sheet from the BMP manufacturer and should be included in Appendix 6

E.4 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must have a removal efficiency of a medium or high effectiveness as quantified below:

- **High**: equal to or greater than 80% removal efficiency
- **Medium**: between 40% and 80% removal efficiency

Such removal efficiency documentation (e.g., studies, reports, etc.) as further discussed in Chapter 3.5.2 of the WQMP Guidance Document, must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

Table E.4 Treatment Control BMP Selection

Selected Treatment Control BMP Name or ID[1]	Priority Pollutant(s) of Concern to Mitigate[2]	Removal Efficiency Percentage[3]

[1] Treatment Control BMPs must not be constructed within Receiving Waters. In addition, a proposed Treatment Control BMP may be listed more than once if they possess more than one qualifying pollutant removal efficiency.
[2] Cross Reference Table E.1 above to populate this column.
[3] As documented in a Co-Permittee Approved Study and provided in Appendix 6.

Section F: Hydromodification

F.1 Hydrologic Conditions of Concern (HCOC) Analysis

Once you have determined that the LID design is adequate to address water quality requirements, you will need to assess if the proposed LID Design may still create a HCOC. Review Chapters 2 and 3 (including Figure 3-7) of the WQMP Guidance Document to determine if your project must mitigate for Hydromodification impacts. If your project meets one of the following criteria which will be indicated by the check boxes below, you do not need to address Hydromodification at this time. However, if the project does not qualify for Exemptions 1, 2 or 3, then additional measures must be added to the design to comply with HCOC criteria. This is discussed in further detail below in Section F.2.

HCOC EXEMPTION 1: The Priority Development Project disturbs less than one acre. The Copermittee has the discretion to require a Project-Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The disturbed area calculation should include all disturbances associated with larger common plans of development.

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, HCOC criteria do not apply.

HCOC EXEMPTION 2: The volume and time of concentration[1] of storm water runoff for the post-development condition is not significantly different from the pre-development condition for a 2-year return frequency storm (a difference of 5% or less is considered insignificant) using one of the following methods to calculate:

- Riverside County Hydrology Manual
- Technical Release 55 (TR-55): Urban Hydrology for Small Watersheds (NRCS 1986), or derivatives thereof, such as the Santa Barbara Urban Hydrograph Method
- Other methods acceptable to the Co-Permittee

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, report results in Table F.1 below and provide your substantiated hydrologic analysis in Appendix 7.

Table F.1 Hydrologic Conditions of Concern Summary

	2 year – 24 hour		
	Pre-condition	**Post-condition**	**% Difference**
Time of Concentration			
Volume (Cubic Feet)			

[1] Time of concentration is defined as the time after the beginning of the rainfall when all portions of the drainage basin are contributing to flow at the outlet.

HCOC EXEMPTION 3: All downstream conveyance channels to an adequate sump (for example, Prado Dam, Lake Elsinore, Canyon Lake, Santa Ana River, or other lake, reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Susceptibility Maps.

Does the project qualify for this HCOC Exemption? ☒ Y ☐ N

If Yes, HCOC criteria do not apply and note below which adequate sump applies to this HCOC qualifier:

Project site identified to be within a non-HCOC applicable area on HCOC applicability map included in Appendix 7. HCOC applicability map also indicates that all downstream conveyance channels that receive runoff from the project are classified as "not susceptible stream channels."

F.2 HCOC Mitigation

If none of the above HCOC Exemption Criteria are applicable, HCOC criteria is considered mitigated if they meet one of the following conditions:

a. Additional LID BMPS are implemented onsite or offsite to mitigate potential erosion or habitat impacts as a result of HCOCs. This can be conducted by an evaluation of site-specific conditions utilizing accepted professional methodologies published by entities such as the California Stormwater Quality Association (CASQA), the Southern California Coastal Water Research Project (SCCRWP), or other Co-Permittee approved methodologies for site-specific HCOC analysis.

b. The project is developed consistent with an approved Watershed Action Plan that addresses HCOC in Receiving Waters.

c. Mimicking the pre-development hydrograph with the post-development hydrograph, for a 2-year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than 10% greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than 110% of the pre-development 2-year peak flow.

Be sure to include all pertinent documentation used in your analysis of the items a, b or c in Appendix 7.

Section G: Source Control BMPs

Source control BMPs include permanent, structural features that may be required in your project plans — such as roofs over and berms around trash and recycling areas — and Operational BMPs, such as regular sweeping and "housekeeping", that must be implemented by the site's occupant or user. The MEP standard typically requires both types of BMPs. In general, Operational BMPs cannot be substituted for a feasible and effective permanent BMP. Using the Pollutant Sources/Source Control Checklist in Appendix 8, review the following procedure to specify Source Control BMPs for your site:

1. ***Identify Pollutant Sources*:** Review Column 1 in the Pollutant Sources/Source Control Checklist. Check off the potential sources of Pollutants that apply to your site.

2. ***Note Locations on Project-Specific WQMP Exhibit*:** Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist. Show the location of each Pollutant source and each permanent Source Control BMP in your Project-Specific WQMP Exhibit located in Appendix 1.

3. ***Prepare a Table and Narrative*:** Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist. In the left column of Table G.1 below, list each potential source of runoff Pollutants on your site (from those that you checked in the Pollutant Sources/Source Control Checklist). In the middle column, list the corresponding permanent, Structural Source Control BMPs (from Columns 2 and 3 of the Pollutant Sources/Source Control Checklist) used to prevent Pollutants from entering runoff. **Add additional narrative** in this column that explains any special features, materials or methods of construction that will be used to implement these permanent, Structural Source Control BMPs.

4. ***Identify Operational Source Control BMPs:*** To complete your table, refer once again to the Pollutant Sources/Source Control Checklist. List in the right column of your table the Operational BMPs that should be implemented as long as the anticipated activities continue at the site. Copermittee stormwater ordinances require that applicable Source Control BMPs be implemented; the same BMPs may also be required as a condition of a use permit or other revocable Discretionary Approval for use of the site.

Table G.1 Permanent and Operational Source Control Measures

Potential Sources of Runoff pollutants	Permanent Structural Source Control BMPs	Operational Source Control BMPs
On-site storm drain inlets	Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.	Maintain and periodically repaint or replace inlet markings. Provide stormwater pollution prevention information to new site owners, lessees, or operators. See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance, " in Appendix 10.
Landscape/ Outdoor Pesticide Use	Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the	Maintain landscaping using minimum or no pesticides.

	use of fertilizers and pesticides that can contribute to stormwater pollution. To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	See applicable operational BMPs in SC-41, " Building and Grounds Maintenance," in Appendix 10.
Refuse areas	State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.	Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34,"Waste Handling and Disposal," in Appendix 10.
Loading Docks		Move loaded and unloaded items indoors as soon as possible. See Fact Sheet SC-30, "Outdoor Loading and Unloading," in Appendix 10.
Plazas, sidewalks, and parking lots.		Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.

Section H: Construction Plan Checklist

Populate Table H.1 below to assist the plan checker in an expeditious review of your project. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table H.1 Construction Plan Cross-reference

BMP No. or ID	BMP Identifier and Description	Corresponding Plan Sheet(s)	BMP Location (Lat/Long)
UNDERGROUND RETENTION CHAMBER #1	*Retention and Infiltration below eastern truck parking on site*	*WQMP Exhibit, Conceptual Grading Plan*	
INFILTRATION TRENCH #1	*Infiltration at easterly end of vegetated swale*	*WQMP Exhibit, Conceptual Grading Plan*	
DRY WELL #1	*Deep infiltration at northeast corner parking lot*	*WQMP Exhibit, Conceptual Grading Plan*	

Note that the updated table — or Construction Plan WQMP Checklist — is **only a reference tool** to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. Co-Permittee staff can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

Section I: Operation, Maintenance and Funding

The Copermittee will periodically verify that Stormwater BMPs on your site are maintained and continue to operate as designed. To make this possible, your Copermittee will require that you include in Appendix 9 of this Project-Specific WQMP:

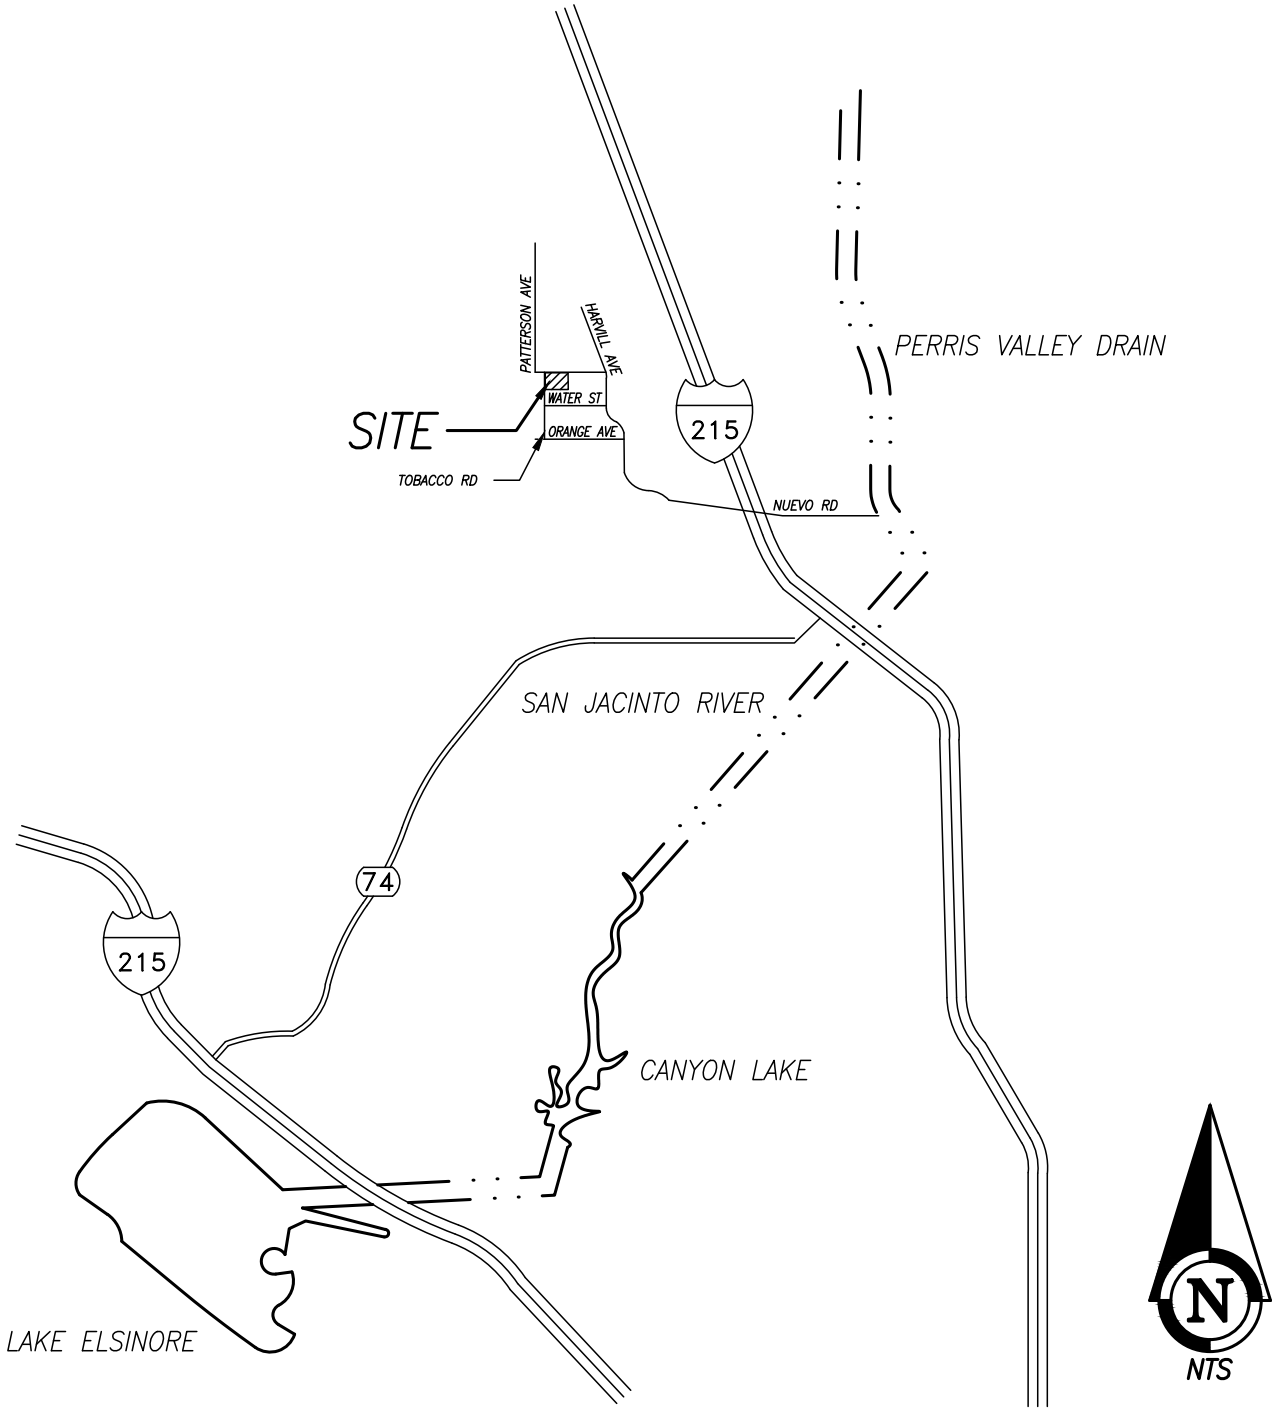
1. A means to finance and implement facility maintenance in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geo-locating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized O&M or inspections but will require typical landscape maintenance as noted in Chapter 5, pages 85-86, in the WQMP Guidance. Include a brief description of typical landscape maintenance for these areas.

Your local Co-Permittee will also require that you prepare and submit a detailed Stormwater BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the Stormwater BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a Stormwater BMP Operation and Maintenance Plan are in Chapter 5 of the WQMP Guidance Document.

Maintenance Mechanism: Property Owner will be responsible for BMP maintenance.

Will the proposed BMPs be maintained by a Home Owners' Association (HOA) or Property Owners Association (POA)?



☐ Y ☒ N

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9. Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

Dear Ms. Jones:

In accordance with your request and authorization, **Geotechnical Engineering Exploration and Analysis** has been conducted for the above referenced site. Conclusions and recommendations developed from the exploration and analysis are discussed in the accompanying report.

We appreciate the opportunity to be of service on this project. If we may be of additional assistance, should geotechnical related problems occur or to provide observation and testing services during construction, please do not hesitate to call at any time.

Very truly yours,
GEO ENVIRONMENTAL RESOURCES, INC.

1.0 PROPOSED DEVELOPMENT

Based on the review of the CONCEPTUAL GRADING PLAN (SHEET 1) which we have received via email, the proposed development consists of construction of 185,785 S.F. of commercial (concrete tilt-up) building within the above subject property.

Based on the information obtained during our site reconnaissance and subsurface exploration, the subject property is a vacant parcel located within the southeast corner of Tobacco Road & Placentia Avenue. It appears that the subject property used to be part of a larger parcel, which was bordered by Water Street to the south, Placentia Avenue to the north, Harvill Avenue to the east and Tobacco Road to the west.

The property is rectangular in shape, is covered with vegetation, and assorted sizes of trees. According to the proposed grading plan the western portion of the site is 3-4 feet higher than the east side. The proposed general parking areas will be located along the west and south side of the subject property. As part of our exploration, we have conducted a percolation test for the proposed Infiltration basin, which will be constructed within the northeast corner of the subject property, which will be designed as landscape area.

2.0 SCOPE OF SERVICES

This report provides the results of a Percolation test and geotechnical engineering exploration and analysis for the construction of the proposed commercial building and other related improvements. We performed a visual site reconnaissance, subsurface exploration, field and laboratory testing, and geotechnical engineering analysis in order to provide geotechnical grading and design recommendations for the proposed commercial building and other related improvement.

3.0 SITE LOCATION

The property is located at 23641 Placentia Avenue in Perris California. The property is bordered by an existing vacant parcel to the east, south, Placentia Avenue to the east and Tobacco Road to the west.

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

4.0 SUBSURFACE EXPLORATION

4.1 Subsurface Exploration

Total of five (5) Borings were excavated within the area of the proposed developments to the depths ranging from of 7 to 30½ feet below existing backyard grade. The approximate boring locations are shown on the boring location plan **(Figure 1, Appendix C).** The Borings was advanced by the drilling rig. Borings No. 5 was also utilized for a perc test for retention basin design.

The relatively undisturbed soil sample was collected at approximate every 1½-3 ½ ft. Soil sampling was conducted in accordance with ASTM D1587 and D3550 Standard Specifications. Soil sample was visually reviewed and classified in the field pursuant to ASTM D2488, placed in sealed containers and transported to our laboratory for further review and testing. **Field and laboratory testing is enclosed in Appendix B**. The terms and symbols on the test boring logs are defined in the **General Notes in Appendix D**.

4.2 Local Geology

Based on review of the **GEOLOGIC MAP OF THE PERRIS QUADRANGLE BY THOMAS W. DIBBLEE, JR., 2003,** the native material was identified as **Alluvial Fan Gravel & Sand Deposits (Qoa) See FIGURE NO.2.**

4.3 Earth Material

The subsurface soil profile at test boring No.1 consists of Silty fine to coarse Sand with Caliche, Gray brown in color, damp to moist and loose to very dense extended to the maximum explored depth of 30 ½ feet below existing grade.

4.4 Top Soil (Ts)

The encountered soil within the top 12-to-18 inches were identified as Topsoil (Ts). The topsoil was classified as brown Silty fine to medium Sand, trace roots.

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

4.5 Native Soil (Ns)

Native materials were encountered below depth of topsoils within all five (5) boring locations. The native soils (Ns) were identified as Alluvial Gravel, Sand & Silt **(Qoa)** deposits.

4.6 Groundwater

Ground water was not encountered during our sub surface exploration. However, it is not uncommon for groundwater or seepage conditions to develop where none previously existed. Groundwater elevations are dependent on seasonal precipitation, irrigation, land use, among other factors, and vary as a result. Based on review of some of the nearest well(s) to the subject property the approximate depth of ground water is between 75-to-85 feet below Ground Surface Elevation **see (Figure No.3)**

4.7 Expansive Potential

Expansion Index (EI) test was conducted according to the ASTM (D-2429) on bulk samples (1-4 feet) from Boring No. 2 of the near-surface materials. Results indicated that the near-surface material are low expansive with in expansion potential of (EI = 4).

4.8 Laboratory Testing

The relatively undisturbed soil samples were subjected to various laboratory tests such as Water-Content Determination (ASTM D2216), Moisture-Unit Weight Relationships (ASTM D-1557), Consolidation Test (ASTM D-2435) and Direct-Shear Test (ASTM D-3080).

4.9 Sulfate Potential

Based on our review of laboratory testing result, the water-soluble sulfate (SO4) content is (56.7 mg/kg), according to ACI 318 Section 4.3.1 (type V) concrete is not required to be utilized for the proposed project.

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

4.10 Corrosion Potential

Based on the review of laboratory test results the on- site soil possess a PH of **6.6** (EPA 9045B) and Resistivity of 3000 (Ohm-cm). Therefore, the on-site soil has been classified as having "**Corrosive"** potential. And the project Structural Engineer should provide specific recommendations for mitigation and protection, as necessary.

5.0 PERCOLATION FEASIBILITY STUDY

Percolation feasibility study for design of retention basin has been conducted. Our exploration consisted of a site inspection, subsurface exploration and percolation test. The purpose of this test was to determine the permeability rate of subsurface materials for retention basin design for onsite water runoffs.

Percolation test holes were excavated to a depth of about 5-feet below existing grades using a field equipment's hand auger. Two inches of gravel was place at the bottom of the hole. A 3-inch in diameter PVC pipe was placed into the hole and extended to the gravel layer. The test locations were pre-saturated prior to testing. Percolation testing began about 24 hours after the holes were pre-saturated. Percolation data sheets are presented in **APPENDIX F** of this report. Calculations to convert the percolation test rate to infiltration test rates are presented in Table 5. A factor of safety should be applied to the infiltration rates below per the Handbook.

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

TABLE 5
INFILTRATION TEST RATES FOR PERCOLATION AREAS

Parameter	P-1
Depth (inches)	60
Test Type	Falling Head
Change in head over time: ΔH (inches)	1.5
Average head: Havg (inches)	20.
Time Interval (minutes): Δt (minutes)	10
Radius of test hole: r (inches)	4
Tested Infiltration Rate: It (inches/hour per square inch)	2.7

The in-situ field percolation tests performed provide short-term infiltration rates, which apply mainly to the initiation of the infiltration process due to the short time frame of the test (hours instead of days) and the amount of water used. Where appropriate, the short-term infiltration rates should be converted to long-term infiltration rates using reduction factors depending upon the degree of infiltrate quality, maintenance access and frequency, site variability, subsurface stratigraphy variation, and other factors, as determined by the project civil engineer. The small-scale percolation testing cannot model the complexity of the effect of interbedded layers of different soil composition, and our test results should be considered only as index values of infiltration rates.

Landscaping adjacent to newly paved areas is not recommended due to the potential of irrigation water infiltrating beneath the pavement's subgrade and base course and cause pavement failure. Where landscaping are planned adjacent to the new pavement, construction of a cutoff wall along the edge of the new pavement is necessary.

The cutoff wall should extend at minimum 6-inch below the bottom of the Aggregate Base Course Material. Finally, if not properly constructed, there is a potential for distress to improvements and properties located in down gradient or adjacent to infiltration areas.

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

6.0 GEOLOGIC AND SEISMICITY

5.1 Seismic Design Parameters

The site is located at approximately 33.8226 Latitude and -117.2501 longitudes. Any new structural related construction must be designed in accordance with the requirements of the latest edition of the California Uniform Building Code (CBC).

The CBC provides procedures for earthquake resistant structural design that include considerations for on-site soil conditions, seismic zoning, occupancy, and the seismic design parameters.

The Site Seismic Parameters presented below are based on the Mapped Acceleration Parameters (Ss and S1) as well as the Site Coefficients and Adjusted Maximum Considered Earthquake Spectral Response Acceleration Parameters. Based on the California Building Code, the site have been identified as Category II and classified as **SITE CLASS D (STIFF SOIL)** based on Table 1613.5.2 (Site Class definitions). The following parameters may be utilized for the subject site. In addition, copies of most current USGS Design Maps Summary is in Appendix E of this report.

SITE SEISMIC PARAMETERS	
Mapped 0.2 second Period Spectral Acceleration, Ss	1.488
Mapped 1.0 second Period Spectral Acceleration, S1	0.551
Site Coefficient for Site Class “D”, Fa	1.0
Site Coefficient for Site Class “D”, Fv	Null-See Section 11.4.8
Maximum Considered Earthquake Spectral Response Acceleration Parameters at 0.2 second, SMS	1.488
Maximum Considered Earthquake Spectral Response Acceleration Parameters at 1 second, SM1	Null-See Section 11.4.8
Design Spectral Response Acceleration parameter for 0.2 Second, SDS	0.992
Design Spectral Response Acceleration parameter for 0.2 Second, SD1	Null-See Section 11.4.8

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

5.2 Geological Hazards

It is our judgment, that based on the specific data and information contained or referenced in this report, the construction of the proposed commercial building will be safe against hazards from landslides, settlement or slippage, and they would not adversely affect the stability of the existing and adjacent structures, provided the recommendations presented herein are properly interpreted and implemented.

6.0 SECONDARY SEISMIC EFFECTS

The primary geologic hazard at the sites is moderate to strong ground shaking caused by an earthquake on any of the local or regional faults. The subject property is 16 and 10 miles east and west of active faults, respectively **see (FIGURE-5).** The potential for secondary geologic hazards was also evaluated including, liquefaction, dynamic settlement.

6.1 Liquefaction

Liquefaction is the loss of strength in generally cohesion less, saturated soils when the pore-water pressure induced in the soil by a seismic event becomes equal to or exceeds the overburden pressure. The primary factors in which influence the potential for liquefaction include groundwater table elevation, soil type and grain size characteristics, and relative density of the soil, initial confining pressure, and intensity and duration of ground shaking. The depth within which the occurrence of liquefaction may impact surface improvements is generally identified as the upper 50 feet below the existing ground surface.

However, based on the review of **"CGS Seismic Zonation Program"** as well as the **GEOLOGIC MAP OF PERRIS QUADRANGLE BY THOMAS W. DIBBLEE, JR., 2005**, the subject property is NOT located within "Liquefiable" area. In addition, review of the Susceptibility map of Riverside County revealed that the subject property is within an area with **LOW LIQUEFACTION SUSCEPTIBILTY see (FIGURE-7).**

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

6.2 Surface Rupture

Based on research of available literature and results of site reconnaissance, no known active or potentially active faults underlie the subject site. In addition, the subject site is not located within any **Alquist-Priolo** Earthquake Fault Zone. Based on these considerations, the potential for surface ground rupture at the subject site is considered moderate.

6.3 Landslide

As indicated previously, the subject property is relatively flat. In addition, based on review of "CGS Seismic Hazards Zonation "the subject property is NOT located within potential "Landslide" area.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon the result of sub-surface exploration, laboratory testing, and research, it is the finding of this firm that the construction of the proposed commercial building is considered feasible from a geotechnical engineering standpoint provided the advice and recommendations presented herein are followed and implemented during construction.

Results of moisture-density testing revealed that the majority of the near-surface materials are in damp condition. In addition, results of Consolidation tests, which were conducted on the randomly selected soil samples at various depths also indicated excessive consolidation under potential building pressure.

Therefore, we are recommending that in order to develop a uniform sub-surface layer with increased support characteristics with proper in-situ moisture content, following completion of the existing vegetation and tree removal, the proposed building pad area should be over-excavated to approximate depth of **four (4) feet below bottom of proposed parameter and column footings. The lateral extend of the proposed over-excavations should be 3-feet beyond the edge of the proposed parameter and column footings.**

The foundation system may consist of either independently poured spread footings or a monolithically poured foundation and floor slab thereby using a turned-down slab

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

construction technique. The proposed continuous and column pad footings should be designed by the project structural engineer. However, at the minimum, the parameter and column pad footings should be embedded at least 30-to-24 inches into the newly placed and compacted structural fill material, respectively. The proposed column and continuous footings may be designed for a maximum, allowable soil bearing strength of 2,500 pounds per square foot (psf).

7.1 Site Preparation and Grading

Subgrade Preparation within the Building pad Area

As indicated in section 7.0, we are recommending that in order to develop a uniform sub-surface layer with increased support characteristics, following completion of the trees and vegetation removal, the proposed building area to be over-excavated to approximate depth of eight (8) feet below its proposed Rough Finished Grade (RFG) elevation or an equivalent of four (4) feet below the proposed foundation subgrade (whichever is lower in elevation).

Upon completion of over-excavation, the exposed subgrade within the entire pad area should be scarified to depth of 12-inch, moisture conditioned as necessary and compacted to 90 percent of Maximum Laboratory Dry Density, as determined by (ASTM D-1557) Test Method. **It should be noted that the upper 12-inch should be compacted to 95 percent of its Maximum Laboratory Dry Density.**

Any loose or otherwise unsuitable soil that is encountered during compaction and proof rolling should be removed to depth of firm subgrade, which should be determined and confirmed by a representative from this office.

The entire grading operation should be conducted in the presence of a representative from this office. And the ultimate depth of removal as well as bottom scarification and compacting should be verified and confirmed by our representative as well.

7.2 Pavement Grading Recommendation

Following removal of all the grass, vegetation and trees and necessary cuts. We are recommending that the entire new pavement area to be over-excavated to depth of 24-inch below its Proposed Rough Finished Grade (RFG). Upon completion, the exposed

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

subgrade should be scarified to depth of 12-inch, moisture conditioned, and compacted to at least 90 percent of its Maximum Dry Density as Determined by the (ASTM D 1557-12) Test Method.

7.3 Fill Placement

All the new fill soils should be placed in 8-10 inches thick loose lift and each lift should be Moisture conditioned to the suitable moisture content and compacted to at least 90 percent of the Maximum Laboratory Dry Density as determined by (ASTM D 1557-12) Test Method.

On-site soil may be utilized as structural fill provided they are free of debris and moisture conditioned as necessary to the satisfaction of our field representative.

All grading and fill placement activities should be completed in accordance with the requirements of the City of Perris and/or County of Riverside Grading Guidelines. All fill soils should be compacted to at least 90 percent of the Maximum Laboratory Dry Density as determined by (ASTM D 1557-12).

Compaction tests should be performed periodically by a representative from this office as random verification of compaction and moisture content. These tests are intended to aid the contractor. Since the tests are taken at random locations and depths, they may not be indicative of the entire fill and therefore should not relieve the contractor of his responsibility to meet the project specification.

7.4 Imported Structural Fill

In general, all imported structural fill soils (If needed) should consist of low to non-expansive (EI<20), well-graded soil. Imported soils should be evaluated by a geotechnical engineer or his representative prior to placement.

7.5 Utility Trench Backfill

In general, all the new utility trench backfill should also be compacted to at least 90 percent of the Maximum Laboratory Dry Density as determined by (ASTM D- 1557-12). Compacted trench backfill should be performed to the requirement of the local grading guidelines. The trench backfill soils should be compaction tested where possible, probed

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

and visually evaluated elsewhere. Temporary Excavation In general, temporary excavation higher than four (4) feet should be sloped back to 1:1(Vertical: Horizontal).

8.0 CONSTRUCTION CONSIDERATION

8.1 Excavation Difficulties

In general, the encountered sub-surface material was identified to be in dense to very dense condition. Therefore, some excavation difficulties should be anticipated.

8.2 Over-Sized Partials

During the grading process, if "over-sized" particles encountered in excessive quantities, proper segregation should be conducted in order to make the excavated materials suitable for fill placement or remove them from the excavation area.

9.0 FOUNDATION DESIGN AND CONSTRUCTION

9.1 Shallow Foundation Parameters for the Building (Structural Fill)

1- An allowable Soil Bearing pressure of 2,000 (psf)
2- An allowable At-Rest pressure of 57.5 (psf) **USE 57** (psf)
3- An allowable Active pressure of 38.3 (psf) **USE 40** (psf)
4- An allowable passive pressure of 345.0 (psf) **USE 300** (psf)
5- Friction angle of 30 degree
6- The proposed footing dimension should be provided by the project structural engineer, however, at the minimum the proposed continuous and column pad footing should be embedded at least 36 and 24 inches into newly placed and compacted structural fill soil, respectively.
7- Soil Density 115.2 (psf)
8- Kh =0.25
9- (Delta)(KAE) =0.19
10- (seismic Increment) =21.5 (pcf)
11- Utilize 0.4 for recommended coefficient of friction for sliding

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

9.2 Footing Reinforcement

The minimum longitudinal steel reinforcing within proposed wall and column pad footing should be performed by the project structural engineer. The Bearing suitability of the exposed subgrade within the footing excavation should be evaluated by a representative from this office prior to placement of the reinforcement.

9.3 Floor Slab Design and Construction for Commercial Building

Based on the recommended subgrade preparation and the anticipated live floor loading, a 7-inch-thick concrete slab over the newly placed and structural fill soil which have been moisture conditioned and compacted to 90 percent (with exception of the top 12-inch which should compacted to 95 percent). It is recommended that the Concrete control joints at 30 times slab thickness (per foot) be provided to lower the potential of concrete slab shrinkage.

9.4 Foundation Static Settlement

Most of the settlement will occur during the initial application of the load, which is during the construction of the new tilt-up building. Following completion of the tilt-up Construction, we expect no more than 1-inch total and ¾ -inch differential for the static settlement over span 100 feet.

9.5 Drainage

All the site drainage should be collected and transferred to the street in non-erosive drainage devices. The proposed tilt-up building should be provided with roof drainage as well.

Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation. The ground immediately adjacent to the foundation shall be sloped away from the new structure at a slope of not less than one-unit vertical in 20 units horizontal (5 percent slope) for a minimum distance of 10 feet of horizontal distance measured perpendicular to the face of the wall.

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

If physical obstructions or lot lines prohibit 10 feet of horizontal distance, a 5-percent slope shall be provided to an approved alternative method of diverting water away from the foundation.

9.11 Grading and Foundation Plan Review

It is recommended that proposed grading and foundation plans be reviewed by this office prior to finalization to verify that the plans have been prepared in conformance with the geotechnical recommendations presented in this report and if necessary to provide additional analyses or recommendations.

10.0 RETAINING WALL DESIGN

10.1 Wall Design

For simplicity and ease of report interpretation the following chart had been prepared to show the at rest, active and passive lateral pressures for the proposed retaining walls up to 10 feet high. The design is based on the compacted soil parameters, assuming level-backfill.

ITEM	VALUE1
At-Rest Case	57.5psf/ft (use 58) psf/ft
Active Case	38.3 psf/ft (use 40) psf/ft
Passive Case	345.0 (use 300) psf/ft
*Note: The values are based on Compacted Soil.	

Retaining walls greater than 6 feet in height should be designed for seismic lateral earth pressures. The "**Total seismic earth pressure",** which is a combination of "static earth pressure' and "**incremental seismic pressure".** The pressure distribution may be considered to be a triangle with the maximum pressure at the bottom. The resultant of this force may be assumed to be at 1/3 the height of the wall from the bottom of the wall.

The **"incremental seismic pressure"** can be calculated as the difference of "total seismic earth pressure" and "static earth pressure. Note**, Any computed seismic increment of**

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

lateral earth pressure should not be added to the static (at-rest) lateral earth pressures". The Seismic increment of 21.5 (pcf) should be used for design of the wall greater than 6 feet.

10.2 Retaining Wall Drainage

Retaining walls should be provided with a drainage system at the base of the walls. The drainage should consist of a 4-inch in diameter-perforated pipe, embedded within a 12-inch thick, clean gravel wrapped in a geosynthetic filtration fabric.

10.3 Retaining Wall Backfill

The following is our general guidelines for the backfill within all the proposed retaining wall (s) regardless of their heights. Following placement of the drainage system the on-site soils may be utilized as backfill material behind the proposed retaining walls. The backfill material should be free of any debris as well as the over-sized particles to satisfactory of the project geotechnical engineer.

If needed, the fill material should be moisture conditioned as necessary, placed in thin lifts (8-to-10 inches) and each lift should be compacted with grading equipment to 90 percent of its Maximum Laboratory Dry Density.

As an alternative, the proposed retaining walls may be backfilled with import material with low expansion (EI<20). The imported soil should be evaluated and confirmed by the Geotechnical engineer prior to usage.

11.0 PAVEMENT RECOMMENDATION

11.1 Asphalt Pavement

Based on these findings and assuming traffic index (TI=7) the following table presents the recommended thickness for the new flexible pavement structure consisting of asphaltic concrete over a granular base, along with the appropriate CALTRANS specifications for proper materials and placement procedures.

Preliminary Pavement Recommendations

2511 West La Palma Ave., Suite E
Anaheim, CA 92801
(714) 995-9001

	Parking Spots (Light Traffic Area)	**Driveways and aprons (Heavy Traffic Areas)**
PCC Section: Portland Cement Concrete	6.0-Inch Thick PCC over 6.0-Inch thick Layer of Aggregate Base Course, which had been reinforced	8.0-Inch Thick over 6.0-inch Thick Layer of Aggregate Base Course, which had been reinforced
Asphalt Section Asphaltic Concrete	4-Inch Thick AC over 8-Inch thick layer of Aggregate Base Course	4-Inch Thick AC over 12-Inch Thick Layer of Aggregate Base Course

The underlying recently compacted subgrade should be scarified to depth of 6-inch, moisture conditioned as necessary and compacted to at least 90 percent of Maximum Laboratory Dry Density as Determined by (ASTM D-1557-12) Test Method.

The new Aggregate Base Course material should be moisture conditioned as necessary and compacted to at least 95 percent of the Maximum Laboratory Dry Density as determined by (ASTM D-1557-12) test method. Asphalt Concrete (AC) should be compacted to a minimum of 95 percent of the laboratory Marshall Density.

11.2 Exterior Concrete Flat Work

The preparation of the subgrade soils within the flat work area such as side walk is as follows, the upper 6-inch of pavement over subgrade soils, which had been scarified to depth of 12-inch, moisture conditioned as necessary and compacted to at least 90 percent of the Maximum Laboratory Dry Density as determined by (ASTM D 1557-12) test method.

Anaheim, CA 92801
(714) 995-9001

12.0 EXPLORATION LIMITATIONS

The conclusions and recommendations presented in this report are based on the findings and observations in the field and the results of laboratory tests performed on representative samples. The soils encountered in the boreholes are believed to be representative of the investigated area; however, soil characteristics can vary throughout the site. Geo Environmental Resources Inc. should be notified if subsurface conditions are encountered which differ from those described in this report.

This report has not been prepared for use by parties or projects other than those named and described above. It may not contain sufficient information for other parties or other purposes.

The conclusions and recommendations presented in this report are professional opinions. These opinions have been derived in accordance with current standards of geotechnical engineering and engineering geology practice, field observations and laboratory test results. No other warranty is expressed or implied.

Samples secured for this investigation will be retained in our laboratory for a period of thirty (30) days from the date of this report and will be disposed after this period unless other arrangements are made.

General Notes

GENERAL NOTES

SAMPLE IDENTIFICATION

All samples are visually classified in general accordance with the Unified Soil Classification System (ASTM D-2487-75 or D-2488-75)

DESCRIPTIVE TERM (% BY DRY WEIGHT)

Trace:	1-10%
Little:	11-20%
Some:	21-35%
And/Adjective	36-50%

PARTICLE SIZE (DIAMETER)

Boulders:	8 in and larger
Cobbles:	3 in to 8 in
Gravel:	coarse - ¾ to 3 in
	fine - No. 4 (4.76 mm) to ¾ in
Sand:	coarse - No. 4 (4.76 mm) to No. 10 (2.0 mm)
	medium - No. 10 (2.0 mm) to No. 40 (0.42 mm)
	fine - No. 40 (0.42 mm) to No. 200 (0.074 mm)
Silt:	No. 200 (0.074 mm) and smaller (Non-plastic)
Clay:	No. 200 (0.074 mm) and smaller (Plastic)

SOIL PROPERTY SYMBOLS

Dd:	Dry Density (pcf)
LL:	Liquid Limit, percent
PL:	Plastic Limit, percent
PI:	Plasticity Index (LL-PL)
LOI:	Loss on Ignition, percent
Gs:	Specific Gravity
K:	Coefficient of Permeability
w:	Moisture content, percent
qp:	Calibrated Penetrometer Resistance, tsf
qs:	Vane-Shear Strength, tsf
qu:	Unconfined Compressive Strength, tsf
qc:	Static Cone Penetrometer Resistance Correlated to Unconfined Compressive Strength, tsf
PID:	Results of vapor analysis conducted on representative samples utilizing a Photoionization Detector calibrated to a benzene standard. Results expressed in HNU-units (BDL=Below Detection Limits)
N:	Penetration Resistance per 6 inch interval, or fraction thereof, for a standard 2 inch O.D. (1⅜ inch I.D.) split spoon sampler driven with a 140 pound weight free-falling 30 inches. Performed in general accordance with Standard Penetration Test Specifications (ASTM D-1586). N in blows per foot equals sum of N values where plus sign is shown
Nc:	Penetration Resistance per 1¾ inches of Dynamic Cone Penetrometer. Approximately equivalent to Standard Penetration Test N-Value in blows per foot.
Nr:	Penetration Resistance per 6 inch interval, or fraction thereof, for California Ring Sampler driven with a 140 pound weight free-falling 30 inches per ASTM D-3550. Not equivalent to Standard Penetration Test N-Value.

DRILLING AND SAMPLING SYMBOLS

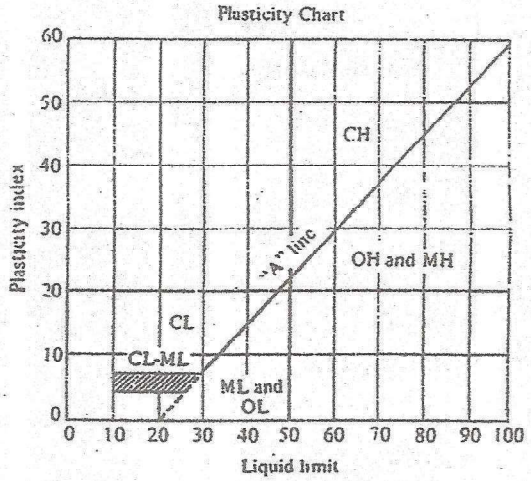
SS:	Split-Spoon
ST:	Shelby Tube - 3" O.D. (except where noted)
CS:	3" O.D. California Ring Sampler
DC:	Dynamic Cone Penetrometer per ASTM Special Technical Publication No. 399
AU:	Auger Sample
DB:	Diamond Bit
CB:	Carbide Bit
WS:	Wash Sample
RB:	Rock-Roller Bit
BS:	Bulk Sample
Note:	Depth intervals for sampling shown on Record of Subsurface Exploration are not indicative of sample recovery, but position where sampling initiated

SOIL STRENGTH CHARACTERISTICS

COHESIVE (CLAYEY) SOILS

COMPARATIVE CONSISTENCY	BLOWS PER FOOT (N)	UNCONFINED COMPRESSIVE STRENGTH (TSF)
Very Soft	0-2	0-0.25
Soft	3-4	0.25-0.50
Medium Stiff	5-8	0.50-1.00
Stiff	9-15	1.00-2.00
Very Stiff	16-30	2.00-4.00
Hard	31+	4.00+

DEGREE OF PLASTICITY	PI	DEGREE OF EXPANSIVE POTENTIAL	PI
None to Slight	0-4	Low	0-15
Slight	5-10	Medium	15-25
Medium	11-30	High	25+
High to Very High	31+		



NON-COHESIVE (GRANULAR) SOILS

RELATIVE DENSITY	BLOWS PER FOOT (N)
Very Loose	0-4
Loose	5-10
Firm	11-30
Dense	31-50
Very Dense	51+

UNIFIED SOIL CLASSIFICATION SYSTEM. (ASTM D-2487)

Major Divisions			Group Symbols	Typical Names	Laboratory Classification Criteria
Coarse-grained soils (More than half of material is larger than No. 200 sieve size)	Gravels (More than half of coarse fraction is larger than No. 4 sieve size)	Clean gravels (Little or no fines)	GW	Well-graded gravels, gravel-sand mixtures, little or no fines	$C_U = \frac{D_{60}}{D_{10}}$ greater than 4; $C_C = \frac{(D_{30})^2}{D_{10} \times D_{60}}$ between 1 and 3
			GP	Poorly graded gravels, gravel-sand mixtures, little or no fines	Not meeting all gradation requirements for GW
		Gravels with fines (Appreciable amount of fines)	GM[a] d / u	Silty gravels, gravel-sand-silt mixtures	Atterberg limits below "A" line or P.I. less than 4 — Above "A" line with P.I. between 4 and 7 are *borderline* cases requiring use of dual symbols
			GC	Clayey gravels, gravel-sand-clay mixtures	Atterberg limits below "A" line with P.I. greater than 7
	Sands (More than half of coarse fraction is smaller than No. 4 sieve size)	Clean sands (Little or no fines)	SW	Well-graded sands, gravelly sands, little or no fines	$C_U = \frac{D_{60}}{D_{10}}$ greater than 6; $C_C = \frac{(D_{30})^2}{D_{10} \times D_{60}}$ between 1 and 3
			SP	Poorly graded sands, gravelly sands, little or no fines	Not meeting all gradation requirements for SW
		Sands with fines (Appreciable amount of fines)	SM[a] d / u	Silty sands, sand-silt mixtures	Atterberg limits above "A" line or P.I. less than 4 — Limits plotting in hatched zone with P.I. between 4 and 7 are *borderline* cases requiring use of dual symbols
			SC	Clayey sands, sand-clay mixtures	Atterberg limits above "A" line with P.I. greater than 7
Fine-grained soils (More than half material is smaller than No. 200 sieve)	Silts and clays (Liquid limit less than 50)		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity	
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays	
			OL	Organic silts and organic silty clays of low plasticity	
	Silts and clays (Liquid limit greater than 50)		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts	
			CH	Inorganic clays of high plasticity, fat clays	
			OH	Organic clays of medium to high plasticity, organic silts	
	Highly organic soils		Pt	Peat and other highly organic soils	

Determine percentages of sand and gravel from grain-size curve. Depending on percentage of fines (fraction smaller than No. 200 sieve size), coarse-grained soils are classified as follows:
- Less than 5 per cent — GW, GP, SW, SP
- More than 12 per cent — GM, GC, SM, SC
- 5 to 12 per cent — *Borderline* cases requiring dual symbols[b]

[a] Division of GM and SM groups into subdivisions of d and u are for roads and airfields only. Subdivision is based on Atterberg limits; suffix d used when L.L. is 28 or less and the P.I. is 6 or less; the suffix u used when L.L. is greater than 28.

[b] Borderline classifications, used for soils possessing characteristics of two groups, are designated by combinations of group symbols. For example: GW-GC, well-graded gravel-sand mixture with clay binder.

CHARACTERISTICS AND RATINGS OF UNIFIED SOIL SYSTEM CLASSES FOR SOIL CONSTRUCTION *

Class	Compaction Characteristics	Max. Dry Density Standard Proctor (pcf)	Compressibility and Expansion	Drainage and Permeability	Value as an Embankment Material	Value as Subgrade When Not Subject to Frost	Value as Base Course	Value as Temporary Pavement	
								With Dust Palliative	With Bituminous Treatment
GW	Good: tractor, rubber-tired, steel wheel or vibratory roller	125-135	Almost none	Good drainage, pervious	Very stable	Excellent	Good	Fair to Poor	Excellent
GP	Good: tractor, rubber-tired, steel wheel or vibratory roller	115-125	Almost none	Good drainage, pervious	Reasonably stable	Excellent to good	Poor to fair	Poor	
GM	Good: rubber-tired or light sheepsfoot roller	120-135	Slight	Poor drainage, semipervious	Reasonably stable	Excellent to good	Fair to poor	Poor	Poor to fair
GC	Good to fair: rubber-tired or sheepsfoot roller	115-130	Slight	Poor drainage, impervious	Reasonably stable	Good	Good to fair **	Excellent	Excellent
SW	Good: tractor, rubber-tired or vibratory roller	110-130	Almost none	Good drainage, pervious	Very stable	Good	Fair to poor	Fair to poor	Good
SP	Good: tractor, rubber-tired or vibratory roller	100-120	Almost none	Good drainage, pervious	Reasonably stable when dense	Good to fair	Poor	Poor	Poor to fair
SM	Good: rubber-tired or sheepsfoot roller	110-125	Slight	Poor drainage, impervious	Reasonably stable when dense	Good to fair	Poor	Poor	Poor to fair
SC	Good to fair: rubber-tired or sheepsfoot roller	105-125	Slight to medium	Poor drainage, impervious	Reasonably stable	Good to fair	Fair to poor	Excellent	Excellent
ML	Good to poor: rubber-tired or sheepsfoot roller	95-120	Slight to medium	Poor drainage, impervious	Poor stability, high density required	Fair to poor	Not suitable	Poor	Poor
CL	Good to fair: sheepsfoot or rubber-tired roller	95-120	Medium	No drainage, impervious	Good stability	Fair to poor	Not suitable	Poor	Poor
OL	Fair to poor: sheepsfoot or rubber-tired roller	80-100	Medium to high	Poor drainage, impervious	Unstable, should not be used	Poor	Not suitable	Not suitable	Not suitable
MH	Fair to poor: sheepsfoot or rubber-tired roller	70-95	High	Poor drainage, impervious	Poor stability, should not be used	Poor	Not suitable	Very poor	Not suitable
CH	Fair to poor: sheepsfoot roller	80-105	Very high	No drainage, impervious	Fair stability, may soften on expansion	Poor to very poor	Not suitable	Very poor	Not suitable
OH	Fair to poor: sheepsfoot roller	65-100	High	No drainage, impervious	Unstable, should not be used	Very poor	Not suitable	Not suitable	Not suitable
Pt	Not suitable		Very high	Fair to poor drainage	Should not be used	Not suitable	Not suitable	Not suitable	Not suitable

* "The Unified Classification: Appendix A - Characteristics of Soil, Groups Pertaining to Roads and Airfields, and Appendix B - Characteristics of Soil Groups Pertaining to Embankments and Foundations," Technical Memorandum 357, U.S. Waterways Experiment Station, Vicksburg, 1953.

1. PURPOSE AND SCOPE

This report provides the results of our recent percolation feasibility study for the proposed Tilt-up Commercial structure. The purpose of the study is to present the results of the field evaluation for the infiltration rate for the storm water runoff at the subject property.

Peculation test was conducted in accordance with **ASTM D 3385 "STANDARD TEST METHOD FOR INFILTRATION RATE OF SOILS IN FIELD USING DOUBLE-RING INFILTROMETER".** Two (2) locations have been designated to conduct the percolation test procedure. Please review the "Site Location Plan" Figure No.1 to review the approximate percolation tests location. The main purpose of multiple-locations is to obtain additional infiltration rates.

2. SUBSURFACE EXPLORATION

Percolation test No.1 was conducted next to Boring No.6 and Percolation No.2 was performed adjacent to the Boring No.5. For percolation, No.1 Test Pit No.1 was excavated to an approximate depth of 80 inches below the existing grade. Test pit Number 2, which was excavated for per was excavated to an approximate depth of 84 inches below the existing grade. Both two test pits were excavated with the help of backhoe and field equipment. The exposed subgrade within both locations were saturated 24-hours prior to actual percolation test.

3. SUBSURFACE CONDITION

The subsurface soil encountered in Test Pit No 1 (TP-1) consisted of Brown Silty Fine to Coarse Sand, Trace Clay Alluvial Deposits (Qof) Dry to damp to the depth of about 18 inches, which was underlain by Orange Silty Fine Sand with Clay to Clayey Fine Sand, Alluvial Deposits (Qof) to the depth of 8 feet. The samples were obtain by the help of the hand auger and field equipment and it was obtained at the corner of test pit, where the percolation had been performed.

2511 west La Palma Avenue, Suite E
Anaheim, CA, (714) 995-9001

In case of Test pit No 2 (TP-2), Soil classified as Brown Silty Fine to Coarse Sand, Trace Clay

Alluvial Deposits (Qof), Dry to damp and dense. This layer was continued to the depth of 3 feet. Then after that we observed Cemented soil with CALICHE, Alluvial Deposit (Qof) and moist which was very dense as well

Detailed geotechnical subsurface condition was originally discussed in our original geotechnical report (G-021422), which was prepared as Proposed Tilt up.

According to attached figure 6, the subject site is not located within a "Liquefaction Zone" based on the review of the liquefaction map of California (California Department of Conservation). Also there is no evidence of near-surface groundwater in our subsurface exploration. Within Test Pit No.1 and 2 there was no groundwater encountered to maximum explored depth.

4. GEOTECHNICAL CONSIDERATIONS

The followings were considered prior to test procedure. :

1. Water infiltration into the ground should be at least 10 feet above the groundwater table.
2. The distance between the infiltration facility and the adjacent private property lines should be at least 10 feet.
3. The minimum foundation set back should be at least 10 feet from the infiltration facility.

4. Test Procedure

The double ring infiltrometer test (ASTM D 3385) is a well recognized and documented technique for directly measuring the soil infiltration rate of a site. Double ring infiltration was developed in response to the fact that smaller (less than 40 inch diameter) single ring infiltrometers tend to overestimate vertical infiltration rates. This has been attributed to the fact that the flow of water beneath the cylinder is not purely vertical and diverges laterally.

2511 west La Palma Avenue, Suite E

Anaheim, CA, (714) 995-9001

Double ring infiltrometers minimize the error associated with the single-ring method because the water level in the outer ring forces vertical infiltration of water in the inner ring. Care should be taken when driving the rings into the ground as there can be a poor connection between the ring wall and the soil. This poor connection can cause a leakage of water along the ring wall and an overestimation of the infiltration rate. Another potential source of error is attributed to the size of the cylinders. As such, the use of cylinder sizes less than those prescribed in ASTM D 3385 is not recommended by most codes.

Geo Environmental Resources, double ring infiltrometer consists of a 12-inch inner ring and a 24-inch outer ring. While there are two operational techniques used with the double-ring infiltrometer, the constant head method and the falling head method; ASTM D3385 mandates the use of the constant head method.

With the constant head method, water is consistently added to both the outer and inner rings to maintain a constant level throughout the testing. The volume of water needed to maintain the fixed level of the inner ring is measured. To help maintain a constant head, a variety of devices may be used. A hook gauge, steel tape or rule, or length of steel or plastic rod pointed on one end, can be used for measuring and controlling the depth of liquid (head) in the infiltrometer ring. If available, a graduated Mariotte tube or automatic flow control system may also be used.

On the other hand and with the falling head method, which has been used in this report, the falling level of the water is measured in each time interval and ultimately, as shown in following tables, a final report shall be provided and, based on the test results, an infiltration rate shall be recommended. The final number is average of previous 4-infiltration rate.

2511 west La Palma Avenue, Suite E
Anaheim, CA, (714) 995-9001

5. FINDINGS AND CONCLUSIONS

Result of Percolation test **No.1 indicates 5.25 inch/hr.** with a percolation **No.2 indicating 4.7 inch/hr.** Attached please see percolation tables and graphs.

($\boldsymbol{Final\ Infiltration\ rate} = \frac{\boldsymbol{Infiltration\ rate\ from\ test}}{\boldsymbol{Factor\ of\ safety}}$) **The minimum recommended factor of safety will be two (2).** Therefore, the actual infiltration rate of subject property will be half of the obtained infiltration rate**.**

It is our opinion that due the variability within the near-surface soil, the lower infiltration rate (Infiltration No.2) should be considered to utilize in the design. Therefore, the recommended infiltration rate is 2.35 Inch/hr.

1. The infiltration of the storm water will not result in ground settlement that could affect adversely the proposed structure.
2. All results and findings are based on level (Horizontal) surface area. Effect of any slope or inclination shall be considered to evaluate the final Percolation rate.
3. The proposed infiltration facility should be designed in such way that in case of "Drainage Capacity Failure" overflow to street.

Notes:

Infiltration Trench - Design Procedure	BMP ID: TRENCH	Legend:	Required Entries / Calculated Cells
Company Name: ARSMTRONG & BROOKS		Date:	11/1/2024
Designed by: ALEX GUTIERREZ		County/City Case No.:	

Design Volume

Enter the area tributary to this feature, Max = 10 acres	A_t =	1	acres
Enter V_{BMP} determined from Section 2.1 of this Handbook	V_{BMP} =	468	ft^3

Calculate Maximium Depth of the Reservoir Layer

Enter Infiltration rate	I =	2.7	in/hr
Enter Factor of Safety, FS (unitless)	FS =	3	
Obtain from Table 1, Appendix A: "Infiltration Testing" of this BMP Handbook			
	n =	40	%
Calculate D_1. $D_1 = \frac{I\ (in/hr) \times 72\ hrs}{12\ (in/ft) \times (n/100) \times FS}$	D_1 =	13.50	ft
Enter depth to historic high groundwater mark (measured from finished grade)		45	ft
Enter depth to top of bedrock or impermeable layer (measured from finished grade)		60	ft
D_2 is the smaller of: Depth to groundwater - 11 ft; & Depth to impermeable layer - 6 ft	D_2 =	34.0	ft
D_{MAX} is the smaller value of D_1 and D_2, must be less than or equal to 8 feet.	D_{MAX} =	8.0	ft

Trench Sizing

Enter proposed reservoir layer depth D_R, must be ≤ D_{MAX}	D_R =	5.00	ft
Calculate the design depth of water, d_W			
Design $d_W = (D_R) \times (n/100)$	Design d_W =	2.00	ft
Minimum Surface Area, A_S $A_S = \frac{V_{BMP}}{d_W}$	A_S =	234	ft^2
Proposed Design Surface Area	A_D =	340	ft^2
Minimum Width = D_R + 1 foot pea gravel		6.00	ft
Sediment Control Provided? (Use pulldown)			
Geotechnical report attached? (Use pulldown)		Yes	

If the trench has been designed correctly, there should be no error messages on the spreadsheet.

Notes:

Infiltration Basin - Design Procedure (Rev. 03-2012)	BMP ID CHAMBERS	Legend:	Required Entries / Calculated Cells

Company Name: ARMSTRONG & BROOKS — Date: 11/1/2024

Designed by: JOSHUA GROENHEIM — County/City Case No.:

Design Volume

a) Tributary area (BMP subarea)	A_T =	7.26	acres
b) Enter V_{BMP} determined from Section 2.1 of this Handbook	V_{BMP}=	12,546	ft^3

Maximum Depth

a) Infiltration rate	I =	2.7	in/hr
b) Factor of Safety (See Table 1, Appendix A: "Infiltration Testing" from this BMP Handbook)	FS =	3	
c) Calculate D_1 $D_1 = \frac{I\ (in/hr) \times 72\ hrs}{12\ (in/ft) \times FS}$	D_1 =	5.4	ft
d) Enter the depth of freeboard (at least 1 ft)		1	ft
e) Enter depth to historic high ground water (measured from **top** of basin)		50	ft
f) Enter depth to top of bedrock or impermeable layer (measured from **top** of basin)		10	ft
g) D_2 is the smaller of: Depth to groundwater - (10 ft + freeboard) and Depth to impermeable layer - (5 ft + freeboard)	D_2 =	4.0	ft
h) D_{MAX} is the smaller value of D_1 and D_2 but shall not exceed 5 feet	D_{MAX} =	4.0	ft

Basin Geometry

a) Basin side slopes (no steeper than 4:1)	z =	4	:1
b) Proposed basin depth (excluding freeboard)	d_B =	1	ft
c) Minimum bottom surface area of basin ($A_S = V_{BMP}/d_B$)	A_S =	12546	ft^2
d) Proposed Design Surface Area	A_D =	33335	ft^2

Forebay

a) Forebay volume (minimum 0.5% V_{BMP})	Volume =	63	ft^3
b) Forebay depth (height of berm/splashwall. 1 foot min.)	Depth =		ft
c) Forebay surface area (minimum)	Area =		ft^2
d) Full height notch-type weir	Width (W) =		in

PROJECT SUMMARY

CALCULATION DETAILS
- LOADING = HS20/HS25
- APPROX. LINEAR FOOTAGE = 4,577 LF

STORAGE SUMMARY
- STORAGE VOLUME REQUIRED = N/A
- PIPE STORAGE VOLUME = 89,859 CF
- BACKFILL STORAGE VOLUME = 41,440 CF
- TOTAL STORAGE PROVIDED = 131,300 CF

PIPE DETAILS
- DIAMETER = 60"
- CORRUGATION = 5x1
- GAGE = 16
- COATING = ALT2
- WALL TYPE = PERFORATED
- BARREL SPACING = 30"

BACKFILL DETAILS
- WIDTH AT ENDS = 12"
- ABOVE PIPE = 2"
- WIDTH AT SIDES = 12"
- BELOW PIPE = 6"

NOTES

- ALL RISER AND STUB DIMENSIONS ARE TO CENTERLINE. ALL ELEVATIONS, DIMENSIONS, AND LOCATIONS OF RISERS AND INLETS, SHALL BE VERIFIED BY THE ENGINEER OF RECORD PRIOR TO RELEASING FOR FABRICATION.
- ALL FITTINGS AND REINFORCEMENT COMPLY WITH ASTM A998.
- ALL RISERS AND STUBS ARE $2\frac{2}{3}$" x $\frac{1}{2}$" CORRUGATION AND 16 GAGE UNLESS OTHERWISE NOTED.
- RISERS TO BE FIELD TRIMMED TO GRADE.
- QUANTITY OF PIPE SHOWN DOES NOT PROVIDE EXTRA PIPE FOR CONNECTING THE SYSTEM TO EXISTING PIPE OR DRAINAGE STRUCTURES. OUR SYSTEM AS DETAILED PROVIDES NOMINAL INLET AND/OR OUTLET PIPE STUB FOR CONNECTION TO EXISTING DRAINAGE FACILITIES. IF ADDITIONAL PIPE IS NEEDED IT IS THE RESPONSIBILITY OF THE CONTRACTOR.
- BAND TYPE TO BE DETERMINED UPON FINAL DESIGN.
- THE PROJECT SUMMARY IS REFLECTIVE OF THE DYODS DESIGN, QUANTITIES ARE APPROX. AND SHOULD BE VERIFIED UPON FINAL DESIGN AND APPROVAL. FOR EXAMPLE, TOTAL EXCAVATION DOES NOT CONSIDER ALL VARIABLES SUCH AS SHORING AND ONLY ACCOUNTS FOR MATERIAL WITHIN THE ESTIMATED EXCAVATION FOOTPRINT.
- THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

DESIGNED: DYO	DRAWN: DYO	
CHECKED: DYO	APPROVED: DYO	
SHEET NO.: 1		

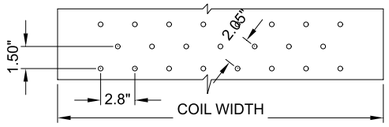
	Infiltration Systems - CMP Infiltration & CMP Perforated Drainage Pipe			
	Material Location	Description	Material Designation	Designation
8	Rigid or Flexible Pavement (if applicable)			
7	Road Base (if applicable			
A	Geotextile Layer	Non-Woven Geotextile	CONTECH C-40 or C-45	Engineer Decision for consideration to prevent soil migration into varying soil types. Wrap the trench only.
6	Backfill	Infiltration pipe systems have a pipe perforation sized of 3/8" diameter. An open graded, free draining stone, with a particle size of ½" – 2 ½" diameter is recommended.	AASHTO M 145-A-1 or AASHTO M 43 - 3, 4	Material shall be worked into the pipe haunches by means of shovel-slicing, rodding, air-tamper, vibratory rod, or other effective methods. Compaction of all placed fill material is necessary and shall be considered adequate when no further yielding of the material is observed under the compactor, or under foot, and the Project Engineer or his representative is satisfied with the level of compaction"
3	Bedding Stone	Well graded granular bedding material w/maximum particle size of 3"	AASHTO M43 - 3,357,4,467, 5, 56, 57	For soil aggregates larger than 3/8" a dedicated bedding layer is not required for CMP. Pipe may be placed on the trench bottom comprised of native suitable well graded & granular material. For Arch pipes it is recommended to be shaped to a relatively flat bottom or fine-grade the foundation to a slight v-shape. Soil aggregates less than 3/8" and unsuitable material should be over-excavated and re-placed with a 4"-6" layer of well graded & granular stone per the material designation.
A	Geotextile Layer	None	None	Contech does not recommend geotextiles be placed under the invert of Infiltration systems due to the propensity for geotextiles to clog over time.
*	Note: The listed AASHTO designations are for gradation only. The stone must also be angular and clean.			

1 MINIMUM WIDTH DEPENDS ON SITE CONDITIONS AND ENGINEERING JUDGEMENT.

FOUNDATION/BEDDING PREPARATION

2 PRIOR TO PLACING THE BEDDING, THE FOUNDATION MUST BE CONSTRUCTED TO A UNIFORM AND STABLE GRADE. IN THE EVENT THAT UNSUITABLE FOUNDATION MATERIALS ARE ENCOUNTERED DURING EXCAVATION, THEY SHALL BE REMOVED AND BROUGHT BACK TO THE GRADE WITH A FILL MATERIAL AS APPROVED BY THE ENGINEER.

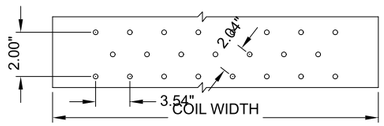
5 HAUNCH ZONE MATERIAL SHALL BE PLACED AND UNIFORMLY COMPACTED WITHOUT SOFT SPOTS.



BACKFILL

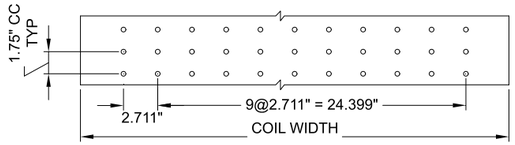
MATERIAL SHALL BE PLACED IN 8"-10" MAXIMUM LIFTS. INADEQUATE COMPACTION CAN LEAD TO EXCESSIVE DEFLECTIONS WITHIN THE SYSTEM AND SETTLEMENT OF THE SOILS OVER THE SYSTEM. BACKFILL SHALL BE PLACED SUCH THAT THERE IS NO MORE THAN A TWO-LIFT DIFFERENTIAL BETWEEN THE SIDES OF ANY PIPE IN THE SYSTEM AT ALL TIMES DURING THE BACKFILL PROCESS. BACKFILL SHALL BE ADVANCED ALONG THE LENGTH OF THE SYSTEM AT THE SAME RATE TO AVOID DIFFERENTIAL LOADING ON ANY PIPES IN THE SYSTEM.

EQUIPMENT USED TO PLACE AND COMPACT THE BACKFILL SHALL BE OF A SIZE AND TYPE SO AS NOT TO DISTORT, DAMAGE, OR DISPLACE THE PIPE. ATTENTION MUST BE GIVEN TO PROVIDING ADEQUATE MINIMUM COVER FOR SUCH EQUIPMENT. MAINTAIN BALANCED LOADING ON ALL PIPES IN THE SYSTEM DURING ALL SUCH OPERATIONS.



OTHER ALTERNATE BACKFILL MATERIAL MAY BE ALLOWED DEPENDING ON SITE SPECIFIC CONDITIONS. REFER TO TYPICAL BACKFILL DETAIL FOR MATERIAL REQUIRED.

2 2/3" x 1/2" CORRUGATION - STEEL AND ALUMINUM CMP EDGE SPACING EQUAL ON BOTH SIDES

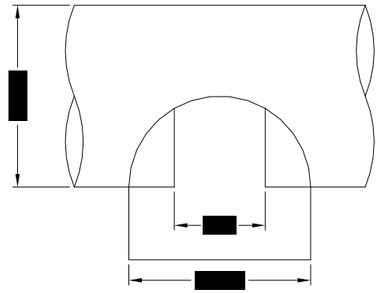


OPEN AREA = 3.76 SQ IN/SQ FT

3" x 1" CORRUGATION - STEEL AND ALUMINUM CMP (COIL PROVIDED FROM CONTECH LANTANA, FL PLANT)

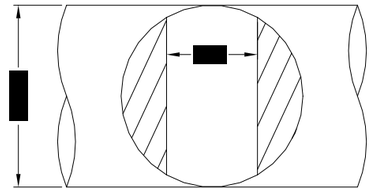
OPEN AREA = 4.16 SQ IN/SQ FT

5" x 1" CORRUGATION - STEEL ONLY
EDGE SPACING EQUAL ON BOTH SIDES



OPEN AREA = 3.33 SQ IN/SQ FT

NOTES:



1. PERFORATIONS MEET AASHTO AND ASTM SPECIFICATIONS.
2. PERFORATION OPEN AREA PER SQUARE FOOT OF PIPE IS BASED ON THE NOMINAL DIAMETER AND LENGTH OF PIPE.
3. ALL DIMENSIONS ARE SUBJECT TO MANUFACTURING TOLERANCES.
4. ALL HOLES ⌀3/8".

CONSTRUCTION LOADS

FOR TEMPORARY CONSTRUCTION VEHICLE LOADS, AN EXTRA AMOUNT OF COMPACTED COVER MAY BE REQUIRED OVER THE TOP OF THE PIPE. THE HEIGHT-OF-COVER SHALL MEET THE MINIMUM REQUIREMENTS SHOWN IN THE TABLE BELOW. THE USE OF HEAVY CONSTRUCTION EQUIPMENT NECESSITATES GREATER PROTECTION FOR THE PIPE THAN FINISHED GRADE COVER MINIMUMS FOR NORMAL HIGHWAY TRAFFIC.

PIPE SPAN, INCHES	AXLE LOADS (kips)			
	18-50	50-75	75-110	110-150
	MINIMUM COVER (FT)			
12-42	2.0	2.5	3.0	3.0
48-72	3.0	3.0	3.5	4.0
78-120	3.0	3.5	4.0	4.0
126-144	3.5	4.0	4.5	4.5

*MINIMUM COVER MAY VARY, DEPENDING ON LOCAL CONDITIONS. THE CONTRACTOR MUST PROVIDE THE ADDITIONAL COVER REQUIRED TO AVOID DAMAGE TO THE PIPE. MINIMUM COVER IS MEASURED FROM THE TOP OF THE PIPE TO THE TOP OF THE MAINTAINED CONSTRUCTION ROADWAY SURFACE.

CONSTRUCTION LOADING DIAGRAM

SCALE: N.T.S.

SPECIFICATION FOR DESIGNED DETENTION SYSTEM:

SCOPE
THIS SPECIFICATION COVERS THE MANUFACTURE AND INSTALLATION OF THE DESIGNED DETENTION SYSTEM DETAILED IN THE PROJECT PLANS.

MATERIAL
THE MATERIAL SHALL CONFORM TO THE APPLICABLE REQUIREMENTS LISTED BELOW:

ALUMINIZED TYPE 2 STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-274 OR ASTM A-92.

THE GALVANIZED STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-218 OR ASTM A-929.

THE POLYMER COATED STEEL COILS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-246 OR ASTM A-742.

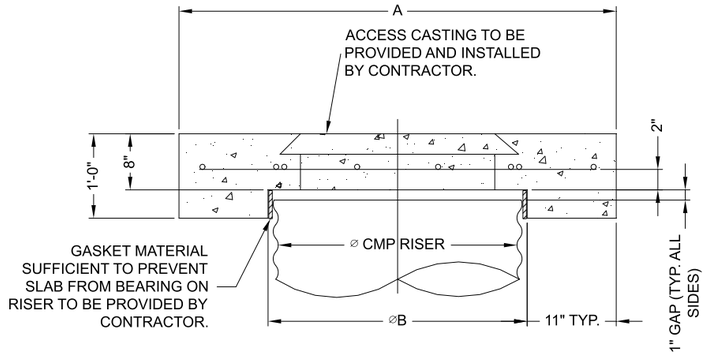
THE ALUMINUM COILS SHALL CONFORM TO THE APPLICABLE OF AASHTO M-197 OR ASTM B-744.

CONSTRUCTION LOADS
CONSTRUCTION LOADS MAY BE HIGHER THAN FINAL LOADS. FOLLOW THE MANUFACTURER'S OR NCSPA GUIDELINES.

PIPE
THE PIPE SHALL BE MANUFACTURED IN ACCORDANCE TO THE APPLICABLE REQUIREMENTS LISTED BELOW:

ALUMINIZED TYPE 2: AASHTO M-36 OR ASTM A-760

GALVANIZED: AASHTO M-36 OR ASTM A-760

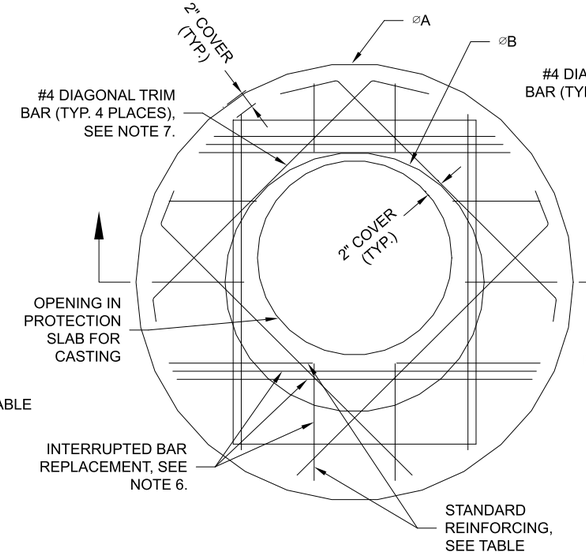


APPLICABLE POLYMER COATED: AASHTO M-245 OR ASTM A-762

ALUMINUM: AASHTO M-196 OR ASTM B-745

APPLICABLE
HANDLING AND ASSEMBLY
SHALL BE IN ACCORDANCE WITH NCSP'S (NATIONAL CORRUGATED STEEL PIPE ASSOCIATION) FOR ALUMINIZED TYPE 2, GALVANIZED OR POLYMER COATED STEEL. SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS FOR ALUMINUM PIPE.
REQUIREMENTS
INSTALLATION
SHALL BE IN ACCORDANCE WITH AASHTO STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES, SECTION 26, DIVISION II DIVISION II OR ASTM A-798 (FOR ALUMINIZED TYPE 2, GALVANIZED OR POLYMER COATED STEEL) OR ASTM B-788 (FOR ALUMINUM PIPE) AND IN CONFORMANCE WITH THE PROJECT PLANS AND SPECIFICATIONS. IF THERE ARE ANY INCONSISTENCIES OR CONFLICTS THE CONTRACTOR SHOULD DISCUSS AND RESOLVE WITH THE SITE ENGINEER.

IT IS ALWAYS THE RESPONSIBILITY OF THE CONTRACTOR TO FOLLOW OSHA GUIDELINES FOR SAFE PRACTICES.



NOTE:
THESE DRAWINGS ARE FOR CONCEPTUAL PURPOSES AND DO NOT REFLECT ANY LOCAL PREFERENCES OR REGULATIONS. PLEASE CONTACT YOUR LOCAL CONTECH REP FOR MODIFICATIONS.

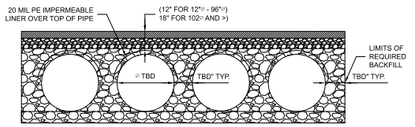
CMP DETENTION INSTALLATION GUIDE

PROPER INSTALLATION OF A FLEXIBLE UNDERGROUND DETENTION SYSTEM WILL ENSURE LONG-TERM PERFORMANCE. THE CONFIGURATION OF THESE SYSTEMS OFTEN REQUIRES SPECIAL CONSTRUCTION PRACTICES THAT DIFFER FROM CONVENTIONAL FLEXIBLE PIPE CONSTRUCTION. CONTECH ENGINEERED SOLUTIONS STRONGLY SUGGESTS SCHEDULING A PRE-CONSTRUCTION MEETING WITH YOUR LOCAL SALES ENGINEER TO DETERMINE IF ADDITIONAL MEASURES, NOT COVERED IN THIS GUIDE, ARE APPROPRIATE FOR YOUR SITE.

FOUNDATION

CONSTRUCT A FOUNDATION THAT CAN SUPPORT THE DESIGN LOADING APPLIED BY THE PIPE AND ADJACENT BACKFILL WEIGHT AS WELL AS MAINTAIN ITS INTEGRITY DURING CONSTRUCTION.

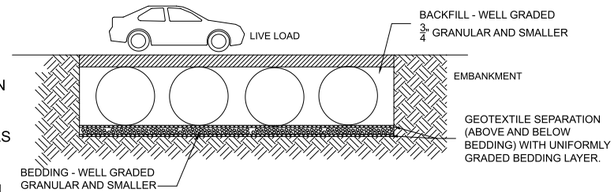
IF SOFT OR UNSUITABLE SOILS ARE ENCOUNTERED, REMOVE THE POOR SOILS DOWN TO A SUITABLE DEPTH AND THEN BUILD UP TO THE APPROPRIATE ELEVATION WITH A COMPETENT BACKFILL MATERIAL. THE STRUCTURAL FILL MATERIAL GRADATION SHOULD NOT ALLOW THE MIGRATION OF FINES, WHICH CAN CAUSE SETTLEMENT OF THE DETENTION SYSTEM OR PAVEMENT ABOVE. IF THE STRUCTURAL FILL MATERIAL IS NOT COMPATIBLE WITH THE UNDERLYING SOILS AN ENGINEERING FABRIC SHOULD BE USED AS A SEPARATOR. IN SOME CASES, USING A STIFF REINFORCING GEOGRID REDUCES OVER EXCAVATION AND REPLACEMENT FILL QUANTITIES.



GRADE THE FOUNDATION SUBGRADE TO A UNIFORM OR SLIGHTLY SLOPING GRADE. IF THE SUBGRADE IS CLAY OR RELATIVELY NON-POROUS AND THE CONSTRUCTION SEQUENCE WILL LAST FOR AN EXTENDED PERIOD OF TIME, IT IS BEST TO SLOPE THE GRADE TO ONE END OF THE SYSTEM. THIS WILL ALLOW EXCESS WATER TO DRAIN QUICKLY, PREVENTING SATURATION OF THE SUBGRADE.

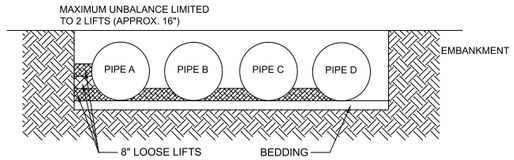
GEOMEMBRANE BARRIER

A SITE'S RESISTIVITY MAY CHANGE OVER TIME WHEN VARIOUS TYPES OF SALTING AGENTS ARE USED, SUCH AS ROAD SALTS FOR DEICING AGENTS. IF SALTING AGENTS ARE USED ON OR NEAR THE PROJECT SITE, A GEOMEMBRANE BARRIER IS RECOMMENDED WITH THE SYSTEM. THE GEOMEMBRANE LINER IS INTENDED TO HELP PROTECT THE SYSTEM FROM THE POTENTIAL ADVERSE EFFECTS THAT MAY RESULT FROM THE USE OF SUCH AGENTS INCLUDING PREMATURE CORROSION AND REDUCED ACTUAL SERVICE LIFE.



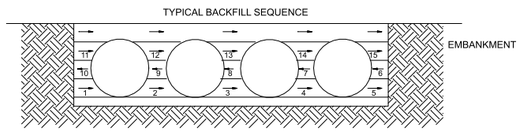
THE PROJECT'S ENGINEER OF RECORD IS TO EVALUATE WHETHER SALTING AGENTS WILL BE USED ON OR NEAR THE PROJECT SITE, AND USE HIS/HER BEST JUDGEMENT TO DETERMINE IF ANY ADDITIONAL PROTECTIVE MEASURES ARE REQUIRED. BELOW IS A TYPICAL DETAIL SHOWING THE PLACEMENT OF A GEOMEMBRANE BARRIER FOR PROJECTS WHERE SALTING AGENTS ARE USED ON OR NEAR THE PROJECT SITE.

IN-SITU TRENCH WALL



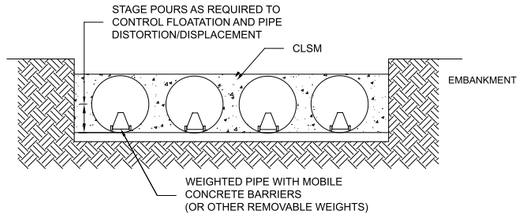
IF EXCAVATION IS REQUIRED, THE TRENCH WALL NEEDS TO BE CAPABLE OF SUPPORTING THE LOAD THAT THE PIPE SHEDS AS THE SYSTEM IS LOADED. IF SOILS ARE NOT CAPABLE OF SUPPORTING THESE LOADS, THE PIPE CAN DEFLECT. PERFORM A SIMPLE SOIL PRESSURE CHECK USING THE APPLIED LOADS TO DETERMINE THE LIMITS OF EXCAVATION BEYOND THE SPRING LINE OF THE OUTER MOST PIPES.

IN MOST CASES THE REQUIREMENTS FOR A SAFE WORK ENVIRONMENT AND PROPER BACKFILL PLACEMENT AND COMPACTION TAKE CARE OF THIS CONCERN.



BACKFILL PLACEMENT

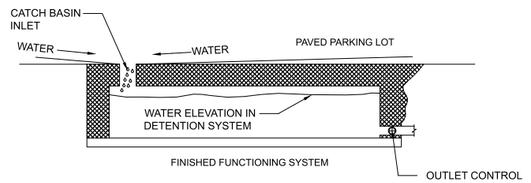
MATERIAL SHALL BE WORKED INTO THE PIPE HAUNCHES BY MEANS OF SHOVEL-SLICING, RODDING, AIR TAMPER, VIBRATORY ROD, OR OTHER EFFECTIVE METHODS.



IF AASHTO T99 PROCEDURES ARE DETERMINED INFEASIBLE BY THE GEOTECHNICAL ENGINEER OF RECORD, COMPACTION IS CONSIDERED ADEQUATE WHEN NO FURTHER YIELDING OF THE MATERIAL IS OBSERVED UNDER THE COMPACTOR, OR UNDER FOOT, AND THE GEOTECHNICAL ENGINEER OF RECORD (OR REPRESENTATIVE THEREOF) IS SATISFIED WITH THE LEVEL OF COMPACTION.

FOR LARGE SYSTEMS, CONVEYOR SYSTEMS, BACKHOES WITH LONG REACHES OR DRAGLINES WITH STONE BUCKETS MAY BE USED TO PLACE BACKFILL. ONCE MINIMUM COVER FOR CONSTRUCTION LOADING ACROSS THE ENTIRE WIDTH OF THE SYSTEM IS REACHED, ADVANCE THE EQUIPMENT TO THE END OF THE RECENTLY PLACED FILL, AND BEGIN THE SEQUENCE AGAIN UNTIL THE SYSTEM IS COMPLETELY BACKFILLED. THIS TYPE OF CONSTRUCTION SEQUENCE PROVIDES ROOM FOR STOCKPILED BACKFILL DIRECTLY BEHIND THE BACKHOE, AS WELL AS THE MOVEMENT OF CONSTRUCTION TRAFFIC. MATERIAL STOCKPILES ON TOP OF THE BACKFILLED DETENTION SYSTEM SHOULD BE LIMITED TO 8- TO 10-FEET HIGH AND MUST PROVIDE BALANCED LOADING ACROSS ALL BARRELS. TO DETERMINE THE PROPER COVER OVER THE PIPES TO ALLOW THE MOVEMENT OF CONSTRUCTION EQUIPMENT SEE TABLE 1, OR CONTACT YOUR LOCAL CONTECH SALES ENGINEER.

WHEN FLOWABLE FILL IS USED, YOU MUST PREVENT PIPE FLOATATION. TYPICALLY, SMALL LIFTS ARE PLACED BETWEEN THE PIPES AND THEN ALLOWED TO SET-UP PRIOR TO THE PLACEMENT OF THE NEXT LIFT. THE ALLOWABLE THICKNESS OF THE CLSM LIFT IS A FUNCTION OF A PROPER BALANCE BETWEEN THE UPLIFT FORCE OF THE CLSM, THE OPPOSING WEIGHT OF THE PIPE, AND THE EFFECT OF OTHER RESTRAINING MEASURES. THE PIPE CAN CARRY LIMITED FLUID PRESSURE WITHOUT PIPE DISTORTION OR DISPLACEMENT, WHICH ALSO AFFECTS THE CLSM LIFT THICKNESS. YOUR LOCAL CONTECH SALES ENGINEER CAN HELP DETERMINE THE PROPER LIFT THICKNESS.



CONSTRUCTION LOADING

TYPICALLY, THE MINIMUM COVER SPECIFIED FOR A PROJECT ASSUMES H-20 LIVE LOAD. BECAUSE CONSTRUCTION LOADS OFTEN EXCEED DESIGN LIVE LOADS, INCREASED TEMPORARY MINIMUM COVER REQUIREMENTS ARE NECESSARY. SINCE CONSTRUCTION EQUIPMENT VARIES FROM JOB TO JOB, IT IS BEST TO ADDRESS EQUIPMENT SPECIFIC MINIMUM COVER REQUIREMENTS WITH YOUR LOCAL CONTECH SALES ENGINEER DURING YOUR PRE-CONSTRUCTION MEETING.

ADDITIONAL CONSIDERATIONS

BECAUSE MOST SYSTEMS ARE CONSTRUCTED BELOW-GRADE, RAINFALL CAN RAPIDLY FILL THE EXCAVATION; POTENTIALLY CAUSING FLOATATION AND MOVEMENT OF THE PREVIOUSLY PLACED PIPES. TO HELP MITIGATE POTENTIAL PROBLEMS, IT IS BEST TO START THE INSTALLATION AT THE DOWNSTREAM END WITH THE OUTLET ALREADY CONSTRUCTED TO ALLOW A ROUTE FOR THE WATER TO ESCAPE. TEMPORARY DIVERSION MEASURES MAY BE REQUIRED FOR HIGH FLOWS DUE TO THE RESTRICTED NATURE OF THE OUTLET PIPE.

CMP DETENTION SYSTEM INSPECTION AND MAINTENANCE

UNDERGROUND STORMWATER DETENTION AND INFILTRATION SYSTEMS MUST BE INSPECTED AND MAINTAINED AT REGULAR INTERVALS FOR PURPOSES OF PERFORMANCE AND LONGEVITY.

INSPECTION

INSPECTION IS THE KEY TO EFFECTIVE MAINTENANCE OF CMP DETENTION SYSTEMS AND IS EASILY PERFORMED. CONTECH RECOMMENDS ONGOING, ANNUAL INSPECTIONS. SITES WITH HIGH TRASH LOAD OR SMALL OUTLET CONTROL ORIFICES MAY NEED MORE FREQUENT INSPECTIONS. THE RATE AT WHICH THE SYSTEM COLLECTS POLLUTANTS WILL DEPEND MORE ON SITE SPECIFIC ACTIVITIES RATHER THAN THE SIZE OR CONFIGURATION OF THE SYSTEM.

INSPECTIONS SHOULD BE PERFORMED MORE OFTEN IN EQUIPMENT WASHDOWN AREAS, IN CLIMATES WHERE SANDING AND/OR SALTING OPERATIONS TAKE PLACE, AND IN OTHER VARIOUS INSTANCES IN WHICH ONE WOULD EXPECT HIGHER ACCUMULATIONS OF SEDIMENT OR ABRASIVE/ CORROSIVE CONDITIONS. A RECORD OF EACH INSPECTION IS TO BE MAINTAINED FOR THE LIFE OF THE SYSTEM

MAINTENANCE

CMP DETENTION SYSTEMS SHOULD BE CLEANED WHEN AN INSPECTION REVEALS ACCUMULATED SEDIMENT OR TRASH IS CLOGGING THE DISCHARGE ORIFICE.

ACCUMULATED SEDIMENT AND TRASH CAN TYPICALLY BE EVACUATED THROUGH THE MANHOLE OVER THE OUTLET ORIFICE. IF MAINTENANCE IS NOT PERFORMED AS RECOMMENDED, SEDIMENT AND TRASH MAY ACCUMULATE IN FRONT OF THE OUTLET ORIFICE. MANHOLE COVERS SHOULD BE SECURELY SEATED FOLLOWING CLEANING ACTIVITIES. CONTECH SUGGESTS THAT ALL SYSTEMS BE DESIGNED WITH AN ACCESS/INSPECTION MANHOLE SITUATED AT OR NEAR THE INLET AND THE OUTLET ORIFICE. SHOULD IT BE NECESSARY TO GET INSIDE THE SYSTEM TO PERFORM MAINTENANCE ACTIVITIES, ALL APPROPRIATE PRECAUTIONS REGARDING CONFINED SPACE ENTRY AND OSHA REGULATIONS SHOULD BE FOLLOWED.

ANNUAL INSPECTIONS ARE BEST PRACTICE FOR ALL UNDERGROUND SYSTEMS. DURING THIS INSPECTION, IF EVIDENCE OF SALTING/DE-ICING AGENTS IS OBSERVED WITHIN THE SYSTEM, IT IS BEST PRACTICE FOR THE SYSTEM TO BE RINSED, INCLUDING ABOVE THE SPRING LINE SOON AFTER THE SPRING THAW AS PART OF THE MAINTENANCE PROGRAM FOR THE SYSTEM.

MAINTAINING AN UNDERGROUND DETENTION OR INFILTRATION SYSTEM IS EASIEST WHEN THERE IS NO FLOW ENTERING THE SYSTEM. FOR THIS REASON, IT IS A GOOD IDEA TO SCHEDULE THE CLEANOUT DURING DRY WEATHER.

THE FOREGOING INSPECTION AND MAINTENANCE EFFORTS HELP ENSURE UNDERGROUND PIPE SYSTEMS USED FOR STORMWATER STORAGE CONTINUE TO FUNCTION AS INTENDED BY IDENTIFYING RECOMMENDED REGULAR INSPECTION AND MAINTENANCE PRACTICES. INSPECTION AND MAINTENANCE RELATED TO THE STRUCTURAL INTEGRITY OF THE PIPE OR THE SOUNDNESS OF PIPE JOINT CONNECTIONS IS BEYOND THE SCOPE OF THIS GUIDE.

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☒ **A. On-site storm drain inlets**	☒ **Locations of inlets.**	☒ **Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.**	☒ **Maintain and periodically repaint or replace inlet markings.** ☒ **Provide stormwater pollution prevention information to new site owners, lessees, or operators.** ☒ **See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com** ☐ **Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."**
☐ **B. Interior floor drains and elevator shaft sump pumps**		☐ **State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**
☐ **C. Interior parking garages**		☐ **State that parking garage floor drains will be plumbed to the sanitary sewer.**	☐ **Inspect and maintain drains to prevent blockages and overflow.**

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ **D1. Need for future indoor & structural pest control**		☐ **Note building design features that discourage entry of pests.**	☐ **Provide Integrated Pest Management information to owners, lessees, and operators.**
☒ **D2. Landscape/ Outdoor Pesticide Use**	☐ **Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained.** ☐ **Show self-retaining landscape areas, if any.** ☐ **Show stormwater treatment and hydrograph modification management BMPs. (See instructions in Chapter 3, Step 5 and guidance in Chapter 5.)**	☐**State that final landscape plans will accomplish all of the following.** ☐ **Preserve existing native trees, shrubs, and ground cover to the maximum extent possible.** ☒ **Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution.** ☐ **Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions.** ☐ **Consider using pest-resistant plants, especially adjacent to hardscape.** ☒ **To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.**	☒ **Maintain landscaping using minimum or no pesticides.** ☒ **See applicable operational BMPs in "What you should know for…..Landscape and Gardening" at http://rcflood.org/stormwater/Downloads/LandscapeGardenBrochure.pdf** ☐ **Provide IPM information to new owners, lessees and operators.**

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ **E. Pools, spas, ponds, decorative fountains, and other water features.**	☐ **Show location of water feature and a sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.)**	**If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.**	☐ **See applicable operational BMPs in "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at http://rcflood.org/stormwater/**
☐ **F. Food service**	☐ **For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment.** ☐ **On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.**	☐ **Describe the location and features of the designated cleaning area.** ☐ **Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.**	☐ **See the brochure, "The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at http://rcflood.org/stormwater/ Provide this brochure to new site owners, lessees, and operators.**
☒ **G. Refuse areas**	☐ **Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas.** ☒ **If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area.** ☐ **Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.**	☐ **State how site refuse will be handled and provide supporting detail to what is shown on plans.** ☒ **State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.**	**State how the following will be implemented:** ☒ **Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

☐ H. Industrial processes.	☐ Show process area.	☐ If industrial processes are to be located on site, state: "All process activities to be performed indoors. No processes to drain to exterior or to storm drain system."	☐ See Fact Sheet SC-10, "Non-Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com See the brochure "Industrial & Commercial Facilities Best Management Practices for: Industrial, Commercial Facilities" at http://rcflood.org/stormwater/

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ I. Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)	☐ Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area. ☐ Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults. ☐ Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.	Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains. Where appropriate, reference documentation of compliance with the requirements of Hazardous Materials Programs for: • Hazardous Waste Generation • Hazardous Materials Release Response and Inventory • California Accidental Release (CalARP) • Aboveground Storage Tank • Uniform Fire Code Article 80 Section 103(b) & (c) 1991 • Underground Storage Tank www.cchealth.org/groups/hazmat/	☐ See the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC-33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ **J. Vehicle and Equipment Cleaning**	☐ **Show on drawings as appropriate:** **(1) Commercial/industrial facilities having vehicle/equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses.** **(2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shutoff to discourage such use).** **(3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer.** **(4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.**	☐ **If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced.**	**Describe operational measures to implement the following (if applicable):** ☐ **Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system. Refer to "Outdoor Cleaning Activities and Professional Mobile Service Providers" for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/** ☐**Car dealerships and similar may rinse cars with water only.**

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ **K. Vehicle/Equipment Repair and Maintenance**	☐ **Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater.** ☐ **Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas.** ☐ **Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.**	☐ **State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area.** ☐ **State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.** ☐ **State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.**	**In the Stormwater Control Plan, note that all of the following restrictions apply to use the site:** ☐ **No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains.** ☐ **No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately.** ☐ **No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment. Refer to "Automotive Maintenance & Car Care Best Management Practices for Auto Body Shops, Auto Repair Shops, Car Dealerships, Gas Stations and Fleet Service Operations". Brochure can be found at http://rcflood.org/stormwater/ Refer to Outdoor Cleaning Activities and Professional Mobile Service Providers for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/**

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ **L. Fuel Dispensing Areas**	☐ **Fueling areas[6] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable.** ☐ **Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1].] The canopy [or cover] shall not drain onto the fueling area.**		☐ **The property owner shall dry sweep the fueling area routinely.** ☐ **See the Fact Sheet SD-30 , "Fueling Areas" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

[6] **The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.**

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☒ **M. Loading Docks**	☒ **Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas shall be drained to the sanitary sewer, or diverted and collected for ultimate discharge to the sanitary sewer.** ☐ **Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation.** ☐ **Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.**		☒ **Move loaded and unloaded items indoors as soon as possible.** ☒ **See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com**

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ N. Fire Sprinkler Test Water		☐ Provide a means to drain fire sprinkler test water to the sanitary sewer.	☐ See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
☐ O. Miscellaneous Drain or Wash Water or Other Sources ☐ Boiler drain lines ☐ Condensate drain lines ☐ Rooftop equipment ☐ Drainage sumps ☐ Roofing, gutters, and trim. ☐ Other sources		☐ Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system. ☐ Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. ☐ Rooftop equipment with potential to produce pollutants shall be roofed and/or have secondary containment. ☐ Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water. ☐ Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff. ☐ Include controls for other sources as specified by local reviewer.	

STORMWATER POLLUTANT SOURCES / SOURCE CONTROL CHECKLIST

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☒ **P. Plazas, sidewalks, and parking lots.**			☒ **Sweep plazas, sidewalks, and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.**

Appendix 9: O&M

Operation and Maintenance Plan and Documentation of Finance, Maintenance and Recording Mechanisms

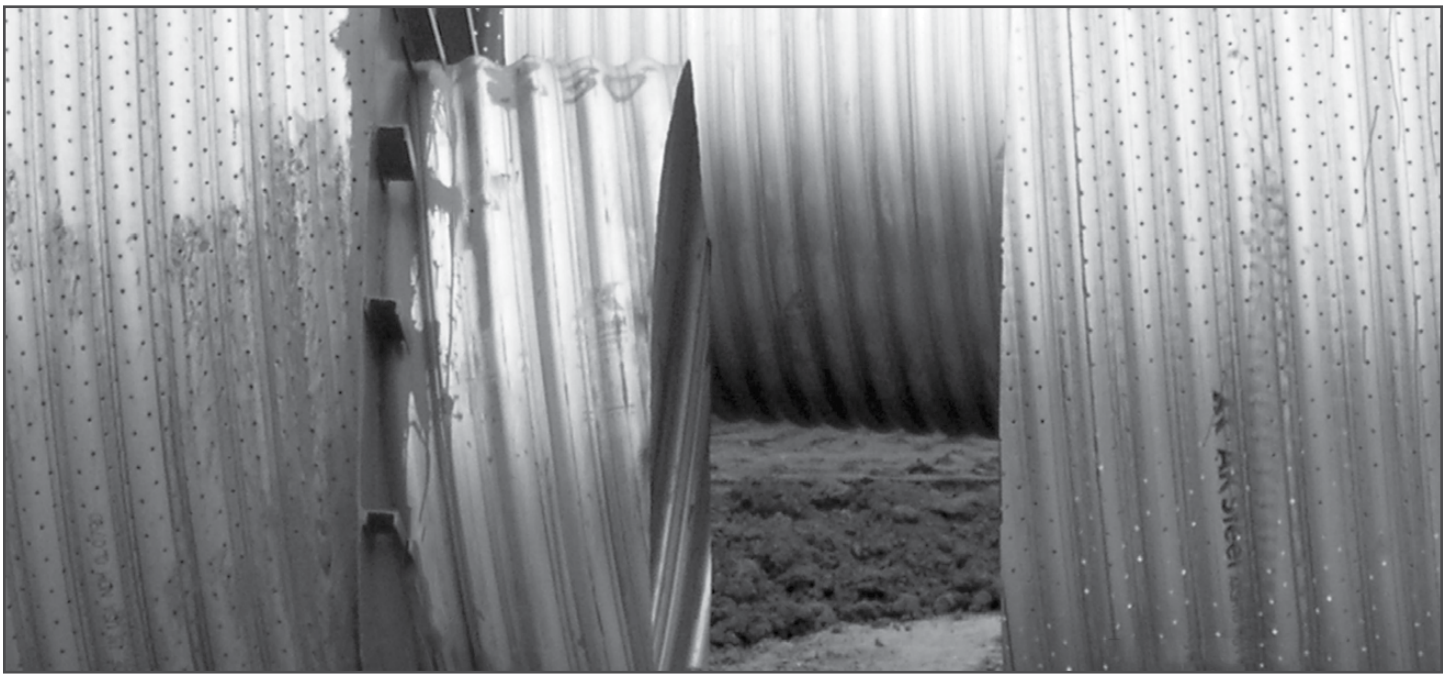
Contech® CMP Detention Inspection and Maintenance Guide

Underground stormwater detention and infiltration systems must be inspected and maintained at regular intervals for purposes of performance and longevity.

Inspection

Inspection is the key to effective maintenance of CMP detention systems and is easily performed. Contech recommends ongoing, annual inspections. Sites with high trash load or small outlet control orifices may need more frequent inspections. The rate at which the system collects pollutants will depend more on-site specific activities rather than the size or configuration of the system.

Inspections should be performed more often in equipment washdown areas, in climates where sanding and/or salting operations take place, and in other various instances in which one would expect higher accumulations of sediment or abrasive/corrosive conditions. A record of each inspection is to be maintained for the life of the system.



Maintenance

CMP detention systems should be cleaned when an inspection reveals accumulated sediment or trash is clogging the discharge orifice. Accumulated sediment and trash can typically be evacuated through the manhole over the outlet orifice. If maintenance is not performed as recommended, sediment and trash may accumulate in front of the outlet orifice. Manhole covers should be securely seated following cleaning activities. Contech suggests that all systems be designed with an access/inspection manhole situated at or near the inlet and the outlet orifice. Should it be necessary to get inside the system to perform maintenance activities, all appropriate precautions regarding confined space entry and OSHA regulations should be followed.

Annual inspections are best practice for all underground systems. During this inspection if evidence of salting/de-icing agents is observed within the system, it is best practice for the system to be rinsed, including above the spring line soon after the spring thaw as part of the maintenance program for the system.

Maintaining an underground detention or infiltration system is easiest when there is no flow entering the system. For this reason, it is a good idea to schedule the cleanout during dry weather.

The foregoing inspection and maintenance efforts help ensure underground pipe systems used for stormwater storage continue to function as intended by identifying recommended regular inspection and maintenance practices. Inspection and maintenance related to the structural integrity of the pipe or the soundness of pipe joint connections is beyond the scope of this guide.

CMP Detention and Infiltration Installation Guide

CMP Detention and Infiltration Installation Guide

Proper installation of a flexible underground detention system will ensure long-term performance. The configuration of these systems often requires special construction practices that differ from conventional flexible pipe construction. Contech recommends scheduling a preconstruction meeting with your local Contech Representative to determine if additional measures, not covered in this guide, are appropriate for your site.

Preconstruction Meeting

It is a best practice to have a pre-construction meeting with the installation contractor and Contech personnel. Included at the end of this guide is a preconstruction checklist to review prior to installation.

Proper Pipe Unloading, Handling and Placement

The pipe should be unloaded off the flatbed trailer with a fork lift, excavator, crane or other piece of construction equipment. The pipe should never be dropped or rolled off the flatbed trailer. Nylon slings or lifting lugs should be used to lift the pipe into place.

Normally the header row pipe section is placed on the downstream end. For detention systems with a single header row on one end and pipe with bulkheads on the other end; it is a best practice to start pipe placement on the header row end.

Lifting CMP off the flatbed with a front end loader and forks.

Lifting ALT2 CMP with nylon slings.

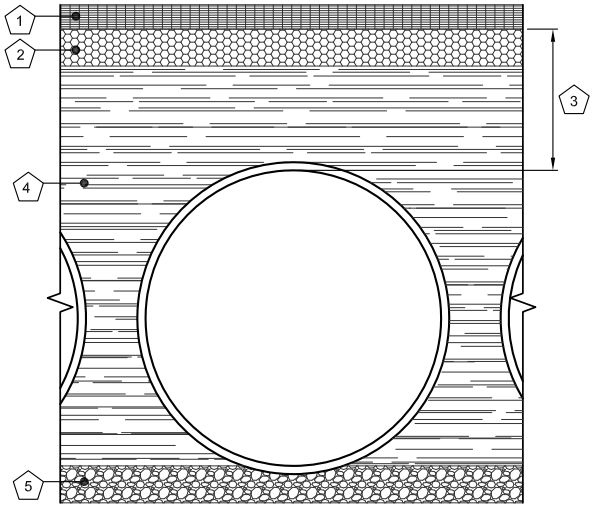
Lowering the header pipe section into place first.

Lifting polymer-coated CMP into place with nylon slings.

Foundation and Pipe Bedding

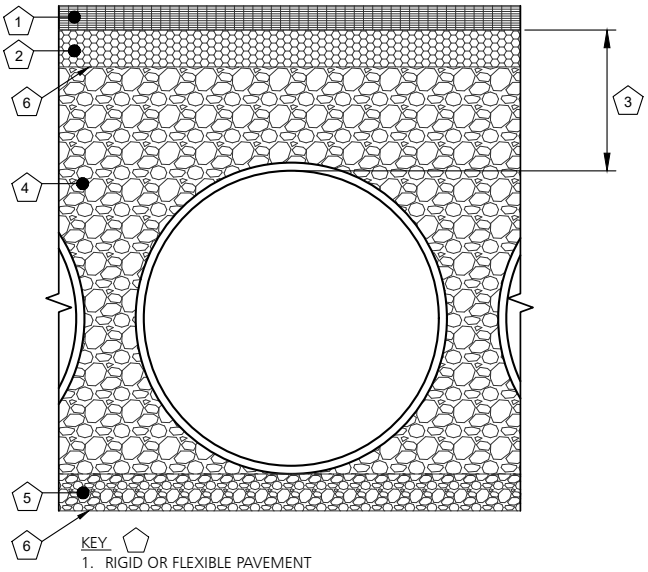
Construct a foundation that can support the design loading applied by the pipe and adjacent backfill weight as well as maintain its integrity during construction. If soft or unsuitable soils are encountered, remove the poor soils to a suitable depth and then replace with a competent granular material to the appropriate elevation. The granular material gradation should not allow the migration of fines, which can cause settlement of the detention system or pavement above. If the structural fill material is not compatible with the underlying soils a geotextile fabric should be used as a separator.

Grade the foundation subgrade to a uniform or slightly sloping grade. If the subgrade is clay or relatively non-porous and the construction sequence will last for an extended period of time, it is best to slope the grade to one end of the system. This will allow excess water to drain quickly, preventing saturation of the subgrade.



A 4" – 6" thick, well-graded granular material is preferred pipe bedding. If the existing foundation is made up of a course sand or other suitable granular material, imported bedding material will not be required.

Site conditions may require 4" – 6" of imported granular material as pipe bedding.



SOLIDWALL BACKFILL DETAIL

KEY ⬠

1. RIGID OR FLEXIBLE PAVEMENT
2. GRANULAR ROAD BASE
3. 12" MIN. FOR DIAMETERS THROUGH 96"
   18" MIN. FOR DIAMETERS FROM 102" AND LARGER MEASURED TO TOP OF RIGID OR BOTTOM OF FLEXIBLE PAVEMENT.
4. SELECT GRANULAR FILL PER AASHTO M145 A1, A2 OR A3 OR APPROVED EQUAL. PLACED IN 8" LIFTS (COMPACTED TO MIN. 90% STANDARD DENSITY PER AASHTO T99)
5. GRANULAR BEDDING, ROUGHLY SHAPED TO FIT THE BOTTOM OF PIPE, 4" TO 6" IN DEPTH.

PERFORATED BACKFILL DETAIL

KEY ⬠

1. RIGID OR FLEXIBLE PAVEMENT
2. GRANULAR ROAD BASE
3. 12" MIN. FOR DIAMETERS THROUGH 96"
   18" MIN. FOR DIAMETERS FROM 102" AND LARGER MEASURED TO TOP OF RIGID OR BOTTOM OF FLEXIBLE PAVEMENT.
4. FREE DRAINING ANGULAR WASHED STONE 3/4" - 2" MIN. PARTICLE SIZE.
5. GRANULAR BEDDING, ROUGHLY SHAPED TO FIT THE BOTTOM OF PIPE, 4" TO 6" IN DEPTH.
6. NON WOVEN GEOTEXTILE (IF REQUIRED), WRAPPING TRENCH ONLY. CONSULT GEOTECHNICAL EOR FOR PROJECT SPECIFIC BACKFILL REQUIREMENTS.

Connecting Bands

There are various types of connecting bands for connecting CMP. Hugger and corrugated bands are the most common. Flat gaskets or O-ring gaskets can also be used in conjunction with connecting bands to reduce leakage in the joints.

Installing a Hugger band on a perforated pipe.

Tightening bolts on a corrugated band.

Installation of band with flat neoprene gasket.

Some jobs may require special bands, such as rod and lug connection, flat bands, or dimple bands.

Geomembrane Barrier

An HDPE membrane liner will be placed on the crown of each pipe to provide an impermeable barrier against environmental changes that may adversely affect the system over time. The liner should extend beyond the 8 and 4 o'clock positions (crown) of the pipe. The HDPE liner is intended to help protect the pipe system from the potential adverse effects of de-icing salts, agricultural chemicals, including premature corrosion.

An HDPE liner is rolled out over the crown of the pipe prior to backfilling around the pipe.

For large diameter pipes, the liner is shipped in rolls that are folded in half. The liner is rolled out over the crown of the pipe, unfolded, and covered over the pipe from the nine and three o'clock position.

In-Situ Trench Wall

If excavation is required, the trench wall needs to be capable of supporting the load that the pipe sheds as the system is loaded. If soils are not capable of supporting these loads, the pipe can deflect. Perform a simple soil pressure check using the applied loads to determine the limits of excavation beyond the spring line of the outer most pipes.

In most cases, the requirements for a safe work environment and proper backfill placement and compaction take care of the concern. The contractor is responsible for the safety of his/her employees and agents.

Safe practices on construction work as outlined in the latest edition of the "Manual of Accident Prevention in Construction," published by the Associated General Contractors, shall be used as a guide and observed. The contractor shall comply with all applicable city, state, and federal safety codes in effect in the area where work is being performed. This conformance shall include the provisions of the current issue of the "OSHA Safety and Health Standards (29 CFR 1926/1910)" as published by the U.S. Department of Labor.

Backfill Material

Corrugated Steel Pipe is a flexible pipe. All buried flexible pipes are dependent on a quality backfill material for structural support. AASHTO refers to these pipe systems as, "Soil-Corrugated Metal Structure Interaction Systems". The best backfill material is an angular, well-graded, granular fill meeting the requirements of AASHTO A-1, A-2, or A-3. Aggregate materials that are free draining and compact easily such as crushed aggregate, crushed aggregate with fines, gravely sand, and coarse sand make good backfill. The aggregate particle size shall not exceed 3" in diameter.

For solid pipe, well graded or open graded granular material can be used as backfill. Infiltration pipe systems have a pipe perforation sized of 3/8" diameter. An open graded stone, with a particle size of ½" – 2 ½" diameter is recommended for backfill around perforated pipe.

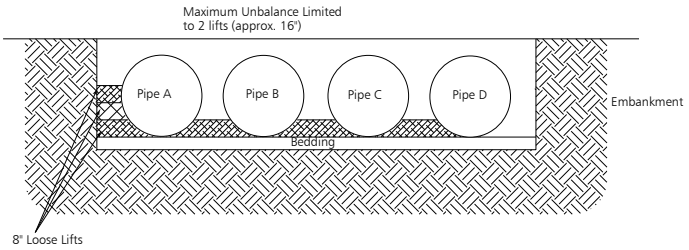
Backfill using controlled low-strength material (CLSM, "flash fill", or "flowable fill") when the spacing between the pipes will not allow for placement and adequate compaction of the backfill.

EXAMPLES OF ACCEPTABLE BACKFILL MATERIAL

Course Sand

Crushed Limestone

Crushed Granite



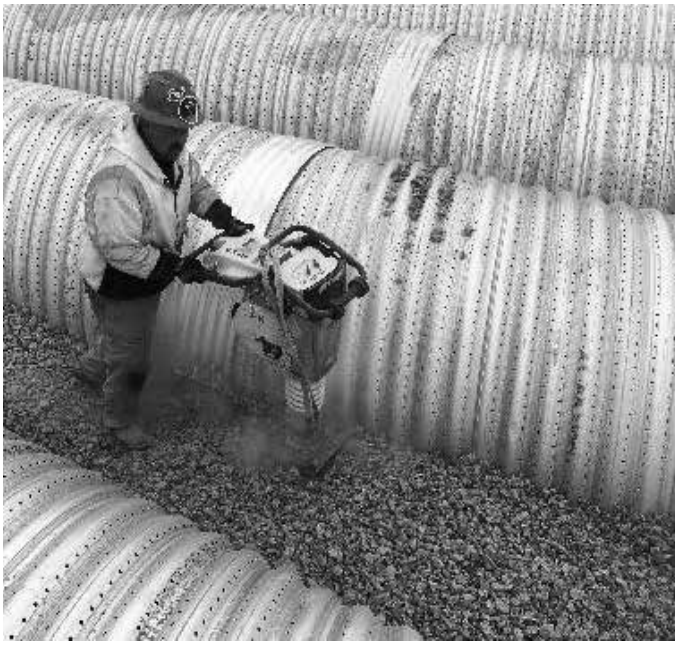
Crushed River Gravel

Backfill Placement

The backfill shall be placed in 8" +/- loose lifts and compacted to 90% AASHTO T99 standard proctor density. Material shall be worked into the pipe haunches by means of shovel-slicing, rodding, vibratory packer, or other effective methods. If AASHTO T99 procedures are determined infeasible by the geotechnical engineer of record, compaction is considered adequate when no further yielding of the material is observed under the compactor, or under foot, and the geotechnical engineer of record (or representative thereof) is satisfied with the level of compaction.

For large systems, conveyor systems, backhoes with long reaches may be used to place backfill. Once minimum cover for the construction loading across the entire width of the system is reached, advance the equipment to the end of the recently placed fill, and begin the sequence again until the system is completely backfilled. This type of construction sequence provides room for stockpiled backfill directly behind the backhoe, as well as the movement of construction traffic.

It is important to keep the elevation of backfill between pipes and side embankment evenly. As a rule of thumb, do not allow for backfill to exceed the elevation of one side of pipe to another pipe or one side of pipe to the outside trench/embankment by more than 24".



Material stockpiles on top of the backfilled detention system should be limited to 9' +/- high and must provide balanced loading across all barrels. To determine the proper minimum cover over the pipes to allow the movement of construction equipment, contact your local Contech Sales Engineer.

If CLSM or "flowable fill" is used as backfill, pipe flotation needs to be prevented. Typically, small lifts are placed between the pipes and then allowed to set-up prior to the placement of the next lift. The allowable thickness of the CLSM lift is a function of a proper balance between the uplift force of the CLSM, the opposing weight of the pipe, and the effect of other restraining measures. Your local Sales Engineer can help determine an appropriate lift thickness.

Placing backfill with a conveyor.

Compaction with vibratory equipment.

Final Cover Placement and Construction Loading

The minimum cover specified for a project normally assumes H-20 highway live loading. Backfill must be placed and fully compacted to the minimum cover level over the structure before the pipe is subjected to design loads. The minimum cover for AASHTO H-20 Live Loading per design section 12, is span of the pipe divided by eight plus asphalt pavement.

Construction loads often exceed design highway loading. During construction, keep heavy construction equipment that exceeds legal highway loads off the pipe. Light construction equipment on tracks such as a D-3 dozer (or lighter weight) may cross over the pipe when a minimum of 12" of compacted backfill is over pipe. Since construction equipment varies from job to job, it is best to address equipment specific minimum cover requirements with your local Contech Sales Engineer during your pre-construction meeting.

Minimum Height of Cover Requirements for Tracked Equipment
HEL-COR® Corrugated Steel Pipe[1]

Diameter (inches)	Minimum Cover (Ft)	Track Width (inches) Maximum Track Pressure at Surface (psi)

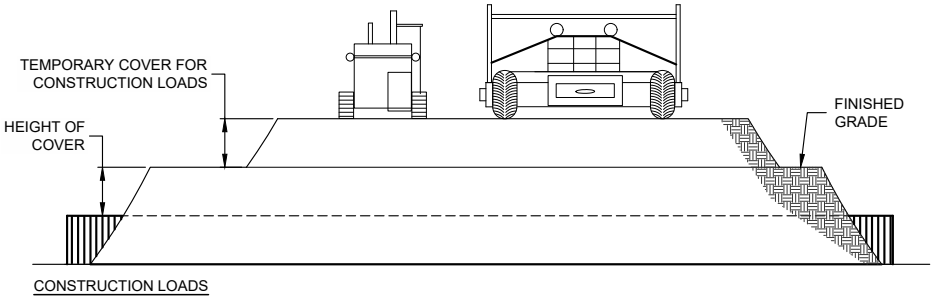
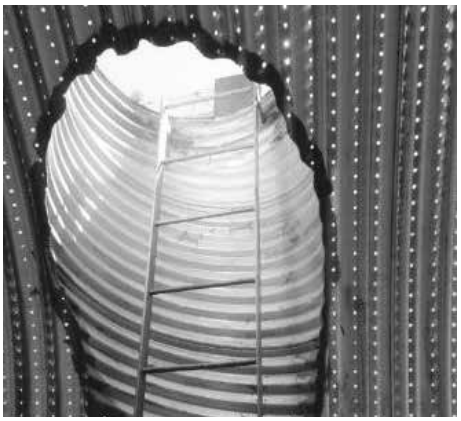
1 *The values in this table represent the maximum ground pressure permitted when performing reasonable work over the pipes, using the manufacture's published equipment specifications. (Ground pressure for track equipment is the vehicle operating weight divided by the total ground contact area for both tracks.) This table is to be used as a guide. Talk to your Contech representative if you have questions about the equipment you plan on operating over the pipes. Care should be taken to maintain adequate cover depth during construction activities.*



Examples of light, tracked, construction equipment used to place final cover over the pipe system.

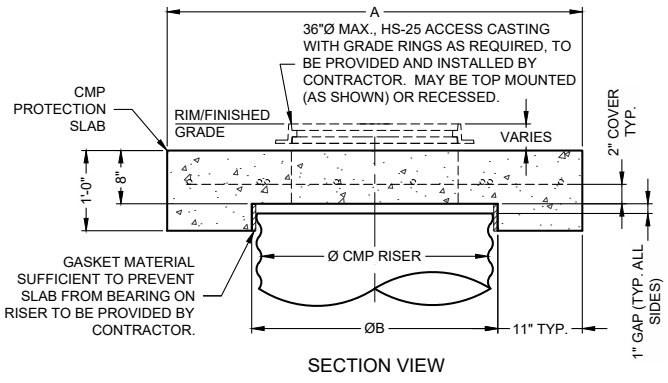
Examples of heavy construction equipment that may require additional minimal cover. Contech can help evaluate minimum cover for the installation contractor for all the equipment on the site.



FOR TEMPORARY CONSTRUCTION VEHICLE LOADS, AN EXTRA AMOUNT OF COMPACTED COVER MAY BE REQUIRED OVER THE TOP OF THE PIPE. THE HEIGHT-OF-COVER SHALL MEET THE MINIMUM REQUIREMENTS SHOWN IN THE TABLE BELOW. THE USE OF HEAVY CONSTRUCTION EQUIPMENT NECESSITATES GREATER PROTECTION FOR THE PIPE THAN FINISHED GRADE COVER MINIMUMS FOR NORMAL HIGHWAY TRAFFIC.

Minimum Height of Cover Requirements for Rubber-Tired Equipment Over HEL-COR® CSP

PIPE SPAN, INCHES	AXLE LOADS (kips)			
	18-50	50-75	75-110	110-150
	MINIMUM COVER (FT)			
12-42	2.0	2.5	3.0	3.0
48-72	3.0	3.0	3.5	4.0
78-120	3.0	3.5	4.0	4.0
126-144	3.5	4.0	4.5	4.5



CMP Manhole Risers

CMP manhole risers allow easy access for future maintenance of the system. If the system is installed under a parking lot or road way subject to live loads, care must be taken to ensure loads are not applied directly to the riser structure. A pre-cast or cast-in-place slab should be installed above the riser. The manhole lid and frame should not rest directly on the CMP riser.

Additional Considerations

Because most systems are constructed below-grade, rainfall can rapidly fill the excavation; potentially causing floatation and movement of the previously placed pipes. To help mitigate potential problems, it is best to start the installation at the downstream end with the outlet already constructed to allow a route for the water to escape. Temporary diversion measures may be required for high flows due to the restricted nature of the outlet pipe.

CMP Preconstruction Checklist

Contech Field Contact and Phone: _____

Contech Plant Contact and Phone: _____

Contractor Contact and Phone: _____

Project Name: _____

Site Address: _____

Pre-con Attendees: _____

Topics to Review:

- ☐ Truck access and pipe storage availability/expectation
- ☐ Pipe unloading and handling safety, equipment and procedures
- ☐ System layout and shop drawing review
- ☐ Shipping schedule and installation sequence
- ☐ Joint configuration and assembly
- ☐ Connection with unlike storm sewer materials
- ☐ Backfill material selection and placement strategy
- ☐ Backfill sequence, lift thickness and balanced loading
- ☐ Compaction requirement (90%) and equipment
- ☐ Additional cover requirements for heavy construction loads
- ☐ CMP riser concrete cap installation

Outdoor Loading/Unloading SC-30

Description

The loading/unloading of materials usually takes place outside on docks or terminals; therefore, materials spilled, leaked, or lost during loading/unloading may collect in the soil or on other surfaces and have the potential to be carried away by wind, stormwater runoff or when the area is cleaned. Additionally, rainfall may wash pollutants from machinery used to unload or move materials. Implementation of the following protocols will prevent or reduce the discharge of pollutants to stormwater from outdoor loading/unloading of materials.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- Park tank trucks or delivery vehicles in designated areas so that spills or leaks can be contained.
- Limit exposure of material to rainfall whenever possible.
- Prevent stormwater run-on.
- Check equipment regularly for leaks.

Good Housekeeping

- Develop an operations plan that describes procedures for loading and/or unloading.
- Conduct loading and unloading in dry weather if possible.

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*
■ *Product Substitution*

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- Cover designated loading/unloading areas to reduce exposure of materials to rain.
- Consider placing a seal or door skirt between delivery vehicles and building to prevent exposure to rain.
- Design loading/unloading area to prevent stormwater run-on, which would include grading or berming the area, and position roof downspouts so they direct stormwater away from the loading/unloading areas.
- Have employees load and unload all materials and equipment in covered areas such as building overhangs at loading docks if feasible.
- Load/unload only at designated loading areas.
- Use drip pans underneath hose and pipe connections and other leak-prone spots during liquid transfer operations, and when making and breaking connections. Several drip pans should be stored in a covered location near the liquid transfer area so that they are always available, yet protected from precipitation when not in use. Drip pans can be made specifically for railroad tracks. Drip pans must be cleaned periodically, and drip collected materials must be disposed of properly.
- Pave loading areas with concrete instead of asphalt.
- Avoid placing storm drains inlets in the area.
- Grade and/or berm the loading/unloading area with drainage to sump; regularly remove materials accumulated in sump.

Spill Response and Prevention Procedures

- Keep your spill prevention and control plan up-to-date or have an emergency spill cleanup plan readily available, as applicable.
- Contain leaks during transfer.
- Store and maintain appropriate spill cleanup materials in a location that is readily accessible and known to all employees.
- Ensure that employees are familiar with the site's spill control plan and proper spill cleanup procedures.
- Use drip pans or comparable devices when transferring oils, solvents, and paints.

Material Handling and Waste Management

- Spot clean leaks and drips routinely to prevent runoff of spillage.
- Do not pour liquid wastes into floor drains, sinks, outdoor storm drain inlets, or other storm drains or sewer connections.

- Do not put used or leftover cleaning solutions, solvents, and automotive fluids in the storm drain or sanitary sewer.
- Collect leaking or dripping fluids in drip pans or containers. Fluids are easier to recycle if kept separate.
- Promptly transfer used fluids to the proper waste or recycling drums. Do not leave drip pans or other open containers lying around.
- Minimize the possibility of stormwater pollution from outside waste receptacles by doing at least one of the following:
  - ✓ Use only watertight waste receptacle(s) and keep the lid(s) closed.
  - ✓ Grade and pave the waste receptacle area to prevent run-on of stormwater.
  - ✓ Install a roof over the waste receptacle area.
  - ✓ Install a low containment berm around the waste receptacle area.
  - ✓ Use and maintain drip pans under waste receptacles.
- Post "no littering" signs.
- Perform work area clean-up and dry sweep after daily operations.

Employee Training Program

- Train employees (e.g., fork lift operators) and contractors on proper spill containment and cleanup.
- Have employees trained in spill containment and cleanup present during loading/unloading.
- Train employees in proper handling techniques during liquid transfers to avoid spills.
- Make sure forklift operators are properly trained on loading and unloading procedures.

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document activities performed, quantities of materials removed, and improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- Establish procedures to complete logs and file them in the central office.
- Keep accurate logs of daily clean-up operations.

Potential Limitations and Work-Arounds

Some facilities may have space constraints, limited staffing and time limitations that may preclude implementation of BMPs. Provided below are typical limitations and recommended "work-arounds."

- Space and time limitations may preclude all transfers from being performed indoors or under cover.
  - ✓ Designate specific areas for outdoor loading and unloading.
  - ✓ Require employees to understand and follow spill and leak prevention BMPs.
- It may not be possible to conduct transfers only during dry weather.
  - ✓ Limit materials and equipment rainfall exposure to all extents practicable.
  - ✓ Require employees to understand and follow spill and leak prevention BMPs.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

Many facilities will already have indoor or covered areas where loading/unloading takes place and will require no additional capital expenditures.

If outdoor activities are required, construction of berms or other means to retain spills and leaks may require appropriate constructed systems for containment. These containment areas may require significant new capital investment.

Capital investments will likely be required at some sites if adequate cover and containment facilities do not exist and can vary significantly depending upon site conditions.

Maintenance

Most of the operations and maintenance activities associated with implementing this BMP are integrally linked to routine operations as previously described. Therefore additional O&M is not required.

- Conduct regular inspections and make repairs and improvements as necessary.
- Check loading and unloading equipment regularly for leaks.
- Conduct regular broom dry-sweeping of area. Do not wash with water.

Supplemental Information

Loading and Unloading of Liquids

- Loading or unloading of liquids should occur in the manufacturing building so that any spills that are not completely retained can be discharged to the sanitary sewer,

treatment plant, or treated in a manner consistent with local sewer authorities and permit requirements.

- For loading and unloading tank trucks to above and below ground storage tanks, the following procedures should be used:
  - ✓ The area where the transfer takes place should be paved. If the liquid is reactive with the asphalt, Portland cement should be used to pave the area.
  - ✓ The transfer area should be designed to prevent run-on of stormwater from adjacent areas. Sloping the pad and using a curb, like a speed bump, around the uphill side of the transfer area should reduce run-on.
  - ✓ The transfer area should be designed to prevent runoff of spilled liquids from the area. Sloping the area to a drain should prevent runoff. The drain should be connected to a dead-end sump or to the sanitary sewer. A positive control valve should be installed on the drain.
- For transfer from rail cars to storage tanks that must occur outside, use the following procedures:
  - ✓ Drip pans should be placed at locations where spillage may occur, such as hose connections, hose reels, and filler nozzles. Use drip pans when making and breaking connections.
  - ✓ Drip pan systems should be installed between the rails to collect spillage from tank cars.

Waste Handling & Disposal SC-34

Description

Improper storage and handling of solid wastes can allow toxic compounds, oils and greases, heavy metals, nutrients, suspended solids, and other pollutants to enter stormwater runoff. The discharge of pollutants to stormwater from waste handling and disposal can be prevented and reduced by tracking waste generation, storage, and disposal; reducing waste generation and disposal through source reduction, reuse, and recycling; and preventing run-on and runoff.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Accomplish reduction in the amount of waste generated using the following source controls:
  - ✓ Production planning and sequencing;
  - ✓ Process or equipment modification;
  - ✓ Raw material substitution or elimination;
  - ✓ Loss prevention and housekeeping;
  - ✓ Waste segregation and separation; and
  - ✓ Close loop recycling.
- ☐ Establish a material tracking system to increase awareness about material usage. This may reduce spills and minimize contamination, thus reducing the amount of waste produced.
- ☐ Recycle materials whenever possible.

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*
■ *Product Substitution*

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- Use the entire product before disposing of the container.
- To the extent possible, store wastes under cover or indoors after ensuring all safety concerns such as fire hazard and ventilation are addressed.
- Provide containers for each waste stream at each work station. Allow time after shift to clean area.

Good Housekeeping

- Cover storage containers with leak proof lids or some other means. If waste is not in containers, cover all waste piles (plastic tarps are acceptable coverage) and prevent stormwater run-on and runoff with a berm. The waste containers or piles must be covered except when in use.
- Use drip pans or absorbent materials whenever grease containers are emptied by vacuum trucks or other means. Grease cannot be left on the ground. Collected grease must be properly disposed of as garbage.
- Dispose of rinse and wash water from cleaning waste containers into a sanitary sewer if allowed by the local sewer authority. Do not discharge wash water to the street or storm drain. Clean in a designated wash area that drains to a clarifier.
- Transfer waste from damaged containers into safe containers.
- Take special care when loading or unloading wastes to minimize losses. Loading systems can be used to minimize spills and fugitive emission losses such as dust or mist. Vacuum transfer systems can minimize waste loss.
- Keep the waste management area clean at all times by sweeping and cleaning up spills immediately.
- Use dry methods when possible (e.g., sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Stencil or demarcate storm drains on the facility's property with prohibitive message regarding waste disposal.
- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropylene or hypalon.
- If possible, move the activity indoor after ensuring all safety concerns such as fire hazard and ventilation are addressed.

Preventative Maintenance

- Prevent stormwater run-on from entering the waste management area by enclosing the area or building a berm around the area.
- Prevent waste materials from directly contacting rain.

- Cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropylene or hypalon.
- Cover the area with a permanent roof if feasible.
- Cover dumpsters to prevent rain from washing waste out of holes or cracks in the bottom of the dumpster.
- Check waste containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.
- Sweep and clean the waste management area regularly. Use dry methods when possible (e.g., sweeping, vacuuming, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Repair leaking equipment including valves, lines, seals, or pumps promptly.

Spill Response and Prevention Procedures

- Keep your spill prevention and plan up-to-date.
- Have an emergency plan, equipment and trained personnel ready at all times to deal immediately with major spills.
- Collect all spilled liquids and properly dispose of them.
- Store and maintain appropriate spill cleanup materials in a location known to all near the designated wash area.
- Ensure that vehicles transporting waste have spill prevention equipment that can prevent spills during transport. Spill prevention equipment includes:
  - ✓ Vehicles equipped with baffles for liquid waste; and
  - ✓ Trucks with sealed gates and spill guards for solid waste.

Material Handling and Waste Management

Litter Control

- Post "No Littering" signs and enforce anti-litter laws.
- Provide a sufficient number of litter receptacles for the facility.
- Clean out and cover litter receptacles frequently to prevent spillage.

Waste Collection

- Keep waste collection areas clean.

- ☐ Inspect solid waste containers for structural damage regularly. Repair or replace damaged containers as necessary.
- ☐ Secure solid waste containers; containers must be closed tightly when not in use.
- ☐ Do not fill waste containers with washout water or any other liquid.
- ☐ Ensure that only appropriate solid wastes are added to the solid waste container. Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc., may not be disposed of in solid waste containers (see chemical/ hazardous waste collection section below).
- ☐ Do not mix wastes; this can cause chemical reactions, make recycling impossible, and complicate disposal. Affix labels to all waste containers.

Chemical/Hazardous Wastes

- ☐ Select designated hazardous waste collection areas on-site.
- ☐ Store hazardous materials and wastes in covered containers and protect them from vandalism.
- ☐ Place hazardous waste containers in secondary containment.
- ☐ Make sure that hazardous waste is collected, removed, and disposed of only at authorized disposal areas.
- ☐ Hazardous waste cannot be reused or recycled; it must be disposed of by a licensed hazardous waste hauler.

Employee Training Program

- ☐ Educate employees about pollution prevention measures and goals.
- ☐ Train employees how to properly handle and dispose of waste using the source control BMPs described above.
- ☐ Train employees and subcontractors in proper hazardous waste management.
- ☐ Use a training log or similar method to document training.
- ☐ Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.

Quality Assurance and Record Keeping

- ☐ Keep accurate maintenance logs that document minimum BMP activities performed for waste handling and disposal, types and quantities of waste disposed of, and any improvement actions.
- ☐ Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.

- Establish procedures to complete logs and file them in the central office.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Capital costs will vary substantially depending on the size of the facility and the types of waste handled. Significant capital costs may be associated with reducing wastes by modifying processes or implementing closed-loop recycling.
- Many facilities will already have indoor covered areas where waste materials will be stored and will require no additional capital expenditures for providing cover.
- If outdoor storage of wastes is required, construction of berms or other means to prevent stormwater run-on and runoff may require appropriate constructed systems for containment.
- Capital investments will likely be required at some sites if adequate cover and containment facilities do not exist and can vary significantly depending upon site conditions.

Maintenance

- Check waste containers weekly for leaks and to ensure that lids are on tightly. Replace any that are leaking, corroded, or otherwise deteriorating.
- Sweep and clean the waste management area regularly. Use dry methods when possible (e.g., sweeping, use of absorbents) when cleaning around restaurant/food handling dumpster areas. If water must be used after sweeping/using absorbents, collect water and discharge through grease interceptor to the sewer.
- Inspect and replace faulty pumps or hoses regularly to minimize the potential of releases and spills.
- Repair leaking equipment including valves, lines, seals, or pumps promptly.

Building & Grounds Maintenance SC-41

Objectives

- Cover
- Contain
- Educate
- Reduce/Minimize
- Product Substitution

Targeted Constituents

Sediment	✓
Nutrients	✓
Trash	
Metals	✓
Bacteria	✓
Oil and Grease	
Organics	

Description

Stormwater runoff from building and grounds maintenance activities can be contaminated with toxic hydrocarbons in solvents, fertilizers and pesticides, suspended solids, heavy metals, abnormal pH, and oils and greases. Utilizing the protocols in this fact sheet will prevent or reduce the discharge of pollutants to stormwater from building and grounds maintenance activities by washing and cleaning up with as little water as possible, following good landscape management practices, preventing and cleaning up spills immediately, keeping debris from entering the storm drains, and maintaining the stormwater collection system.

Approach

Reduce potential for pollutant discharge through source control pollution prevention and BMP implementation. Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

Pollution Prevention

- Switch to non-toxic chemicals for maintenance when possible.
- Choose cleaning agents that can be recycled.
- Encourage proper lawn management and landscaping, including use of native vegetation.

CASQA California Stormwater Quality Association

- Encourage use of Integrated Pest Management techniques for pest control.
- Encourage proper onsite recycling of yard trimmings.
- Recycle residual paints, solvents, lumber, and other material as much as possible.

Suggested Protocols

Pressure Washing of Buildings, Rooftops, and Other Large Objects

- In situations where soaps or detergents are used and the surrounding area is paved, pressure washers must use a water collection device that enables collection of wash water and associated solids. A sump pump, wet vacuum or similarly effective device must be used to collect the runoff and loose materials. The collected runoff and solids must be disposed of properly.
- If soaps or detergents are not used, and the surrounding area is paved, wash runoff does not have to be collected but must be screened. Pressure washers must use filter fabric or some other type of screen on the ground and/or in the catch basin to trap the particles in wash water runoff.
- If you are pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.

Landscaping Activities

- Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage, or by composting. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures on exposed soils.

Building Repair, Remodeling, and Construction

- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.
- Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.
- Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.
- Clean paintbrushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.
- Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a catch basin. This is particularly necessary on rainy days. The containment device(s) must be in place at the beginning of the work day, and accumulated dirty runoff and solids must be collected and disposed of before removing the containment device(s) at the end of the work day.

- If you need to de-water an excavation site, you may need to filter the water before discharging to a catch basin or off-site. If directed off-site, you should direct the water through hay bales and filter fabric or use other sediment filters or traps.
- Store toxic material under cover during precipitation events and when not in use. A cover would include tarps or other temporary cover material.

Mowing, Trimming, and Planting

- Dispose of leaves, sticks, or other collected vegetation as garbage, by composting or at a permitted landfill. Do not dispose of collected vegetation into waterways or storm drainage systems.
- Use mulch or other erosion control measures when soils are exposed.
- Place temporarily stockpiled material away from watercourses and drain inlets, and berm or cover stockpiles to prevent material releases to the storm drain system.
- Consider an alternative approach when bailing out muddy water: do not put it in the storm drain; pour over landscaped areas.
- Use hand weeding where practical.

Fertilizer and Pesticide Management

- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers and pesticides and training of applicators and pest control advisors.
- Use less toxic pesticides that will do the job when applicable. Avoid use of copper-based pesticides if possible.
- Do not use pesticides if rain is expected.
- Do not mix or prepare pesticides for application near storm drains.
- Use the minimum amount needed for the job.
- Calibrate fertilizer distributors to avoid excessive application.
- Employ techniques to minimize off-target application (e.g., spray drift) of pesticides, including consideration of alternative application techniques.
- Apply pesticides only when wind speeds are low.
- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Irrigate slowly to prevent runoff and then only as much as is needed.
- Clean pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.
- Dispose of empty pesticide containers according to the instructions on the container label.

- Use up the pesticides. Rinse containers, and use rinse water as product. Dispose of unused pesticide as hazardous waste.
- Implement storage requirements for pesticide products with guidance from the local fire department and County Agricultural Commissioner. Provide secondary containment for pesticides.

Inspection

- Inspect irrigation system periodically to ensure that the right amount of water is being applied and that excessive runoff is not occurring. Minimize excess watering and repair leaks in the irrigation system as soon as they are observed.

Training

- Educate and train employees on pesticide use and in pesticide application techniques to prevent pollution.
- Train employees and contractors in proper techniques for spill containment and cleanup.
- Be sure the frequency of training takes into account the complexity of the operations and the nature of the staff.

Spill Response and Prevention

- Keep your Spill Prevention Control and Countermeasure (SPCC) Plan up-to-date.
- Place a stockpile of spill cleanup materials, such as brooms, dustpans, and vacuum sweepers (if desired) near the storage area where it will be readily accessible.
- Have employees trained in spill containment and cleanup present during the loading/unloading of dangerous wastes, liquid chemicals, or other materials.
- Familiarize employees with the Spill Prevention Control and Countermeasure Plan.
- Clean up spills immediately.

Other Considerations

Alternative pest/weed controls may not be available, suitable, or effective in many cases.

Requirements

Costs

- Cost will vary depending on the type and size of facility.
- Overall costs should be low in comparison to other BMPs.

Maintenance

Sweep paved areas regularly to collect loose particles. Wipe up spills with rags and other absorbent material immediately, do not hose down the area to a storm drain.

Supplemental Information

Further Detail of the BMP

Fire Sprinkler Line Flushing

Building fire sprinkler line flushing may be a source of non-stormwater runoff pollution. The water entering the system is usually potable water, though in some areas it may be non-potable reclaimed wastewater. There are subsequent factors that may drastically reduce the quality of the water in such systems. Black iron pipe is usually used since it is cheaper than potable piping, but it is subject to rusting and results in lower quality water. Initially, the black iron pipe has an oil coating to protect it from rusting between manufacture and installation; this will contaminate the water from the first flush but not from subsequent flushes. Nitrates, poly-phosphates and other corrosion inhibitors, as well as fire suppressants and antifreeze may be added to the sprinkler water system. Water generally remains in the sprinkler system a long time (typically a year) and between flushes may accumulate iron, manganese, lead, copper, nickel, and zinc. The water generally becomes anoxic and contains living and dead bacteria and breakdown products from chlorination. This may result in a significant BOD problem and the water often smells. Consequently dispose fire sprinkler line flush water into the sanitary sewer. Do not allow discharge to storm drain or infiltration due to potential high levels of pollutants in fire sprinkler line water.

Drainage System Maintenance SC-44

Description

As a consequence of its function, the stormwater drainage facilities on site convey stormwater that may contain certain pollutants either to the offsite conveyance system that collects and transports urban runoff and stormwater, or directly to receiving waters. The protocols in this fact sheet are intended to reduce pollutants leaving the site to the offsite drainage infrastructure or to receiving waters through proper on-site conveyance system operation and maintenance. The targeted constituents will vary depending on site characteristics and operations.

Approach

Successful implementation depends on effective training of employees on applicable BMPs and general pollution prevention strategies and objectives.

General Pollution Prevention Protocols

- ☐ Maintain catch basins, stormwater inlets, and other stormwater conveyance structures on a regular basis to remove pollutants, reduce high pollutant concentrations during the first flush of storms, prevent clogging of the downstream conveyance system, restore catch basins' sediment trapping capacity, and ensure the system functions properly hydraulically to avoid flooding.
- ☐ Develop and follow a site specific drainage system maintenance plan that describes maintenance locations, methods, required equipment, water sources, sediment collection areas, disposal requirements, and any other pertinent information.

Good Housekeeping

Illicit Connections and Discharges

- ☐ Look for evidence of illegal discharges or illicit connections during routine maintenance of conveyance system and drainage structures:

Objectives
■ *Cover*
■ *Contain*
■ *Educate*
■ *Reduce/Minimize*

Targeted Constituents	
Sediment	✓
Nutrients	✓
Trash	✓
Metals	✓
Bacteria	✓
Oil and Grease	✓
Organics	✓

Minimum BMPs Covered	
Good Housekeeping	✓
Preventative Maintenance	✓
Spill and Leak Prevention and Response	✓
Material Handling & Waste Management	
Erosion and Sediment Controls	
Employee Training Program	✓
Quality Assurance Record Keeping	✓

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION®

- ✓ Identify evidence of spills such as paints, discoloring, odors, etc.
- ✓ Record locations of apparent illegal discharges/illicit connections.
- ✓ Track flows back to potential discharges and conduct aboveground inspections. This can be done through visual inspection of upgradient manholes or alternate techniques including zinc chloride smoke testing, fluorometric dye testing, physical inspection testing, or television camera inspection.
- ✓ Eliminate the discharge once the origin of flow is established.

□ Stencil or demarcate storm drains, where applicable, to prevent illegal disposal of pollutants. Storm drain inlets should have messages such as "Dump No Waste Drains to Stream" or similar stenciled next to them to warn against ignorant or intentional dumping of pollutants into the storm drainage system.

□ Refer to fact sheet SC-10 Non-Stormwater Discharges for additional information.

Illegal Dumping

□ Inspect and clean up hot spots and other storm drainage areas regularly where illegal dumping and disposal occurs.

□ Establish a system for tracking incidents. The system should be designed to identify the following:

- ✓ Illegal dumping hot spots;
- ✓ Types and quantities (in some cases) of wastes;
- ✓ Patterns in time of occurrence (time of day/night, month, or year);
- ✓ Mode of dumping (abandoned containers, "midnight dumping" from moving vehicles, direct dumping of materials, accidents/spills); and
- ✓ Responsible parties.

□ Post "No Dumping" signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.

□ Refer to fact sheet SC-10 Non-Stormwater Discharges for additional information.

Preventative Maintenance

Catch Basins/Inlet Structures

□ Staff should regularly inspect facilities to ensure compliance with the following:

- ✓ Immediate repair of any deterioration threatening structural integrity.
- ✓ Cleaning before the sump is 40% full. Catch basins should be cleaned as frequently as needed to meet this standard.

- ☐ Clean catch basins, storm drain inlets, and other conveyance structures before the wet season to remove sediments and debris accumulated during the summer.
- ☐ Conduct inspections more frequently during the wet season for problem areas where sediment or trash accumulates more often. Prioritize storm drain inlets; clean and repair as needed.
- ☐ Keep accurate logs of the number of catch basins cleaned.
- ☐ Store wastes collected from cleaning activities of the drainage system in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.
- ☐ Dewater the wastes if necessary with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not allowed, water should be pumped or vacuumed to a tank and properly disposed. Do not dewater near a storm drain or stream.

Storm Drain Conveyance System

- ☐ Locate reaches of storm drain with deposit problems and develop a flushing schedule that keeps the pipe clear of excessive buildup.
- ☐ Collect and pump flushed effluent to the sanitary sewer for treatment whenever possible.

Pump Stations

- ☐ Clean all storm drain pump stations prior to the wet season to remove silt and trash.
- ☐ Do not allow discharge to reach the storm drain system when cleaning a storm drain pump station or other facility.
- ☐ Conduct routine maintenance at each pump station.
- ☐ Inspect, clean, and repair as necessary all outlet structures prior to the wet season.

Open Channel

- ☐ Modify storm channel characteristics to improve channel hydraulics, increase pollutant removals, and enhance channel/creek aesthetic and habitat value.
- ☐ Conduct channel modification/improvement in accordance with existing laws. Any person, government agency, or public utility proposing an activity that will change the natural state of any river, stream, or lake in California, must enter into a Steam or Lake Alteration Agreement with the Department of Fish and Wildlife. The developer-applicant should also contact local governments (city, county, special districts), other state agencies (SWRCB, RWQCB, Department of Forestry, Department of Water Resources), and Army Corps of Engineers and USFWS.

Spill Response and Prevention Procedures

- ☐ Keep your spill prevention control plan up-to-date.

- Investigate all reports of spills, leaks, and/or illegal dumping promptly.
- Place a stockpile of spill cleanup materials where it will be readily accessible or at a central location.
- Clean up all spills and leaks using "dry" methods (with absorbent materials and/or rags) or dig up, remove, and properly dispose of contaminated soil.

Employee Training Program

- Educate employees about pollution prevention measures and goals.
- Train employees how to properly handle and dispose of waste using the source control BMPs described above.
- Train employees and subcontractors in proper hazardous waste management.
- Use a training log or similar method to document training.
- Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
- Have staff involved in detection and removal of illicit connections trained in the following:
  - ✓ OSHA-required Health and Safety Training (29 CFR 1910.120) plus annual refresher training (as needed).
  - ✓ OSHA Confined Space Entry training (Cal-OSHA Confined Space, Title 8 and Federal OSHA 29 CFR 1910.146).
  - ✓ Procedural training (field screening, sampling, smoke/dye testing, TV inspection).

Quality Assurance and Record Keeping

- Keep accurate maintenance logs that document minimum BMP activities performed for drainage system maintenance, types and quantities of waste disposed of, and any improvement actions.
- Keep accurate logs of spill response actions that document what was spilled, how it was cleaned up, and how the waste was disposed.
- Keep accurate logs of illicit connections, illicit discharges, and illegal dumping into the storm drain system including how wastes were cleaned up and disposed.
- Establish procedures to complete logs and file them in the central office.

Potential Limitations and Work-Arounds

Provided below are typical limitations and recommended "work-arounds" for drainage system maintenance:

- Clean-up activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.

  - ✓ Perform all maintenance onsite and do not flush accumulated material downstream to private property or riparian habitats.

- Storm drain flushing is most effective in small diameter pipes (36-inch diameter pipe or less, depending on water supply and sediment collection capacity). Other considerations associated with storm drain flushing may include the availability of a water source, finding a downstream area to collect sediments, and liquid/sediment disposal.

  - ✓ Develop and follow a site specific drainage system maintenance plan that describes maintenance locations, methods, required equipment, water sources, sediment collection areas, disposal requirements, and any other pertinent information.

- Regulations may include adoption of substantial penalties for illegal dumping and disposal.

  - ✓ Do not dump illegal materials anywhere onsite.

  - ✓ Identify illicit connections, illicit discharge, and illegal dumping.

  - ✓ Cleanup spills immediately and properly dispose of wastes.

- Local municipal codes may include sections prohibiting discharge of soil, debris, refuse, hazardous wastes, and other pollutants into the sanitary sewer system.

  - ✓ Collect all materials and pollutants accumulated in drainage system and dispose of according to local regulations.

  - ✓ Install debris excluders in areas with a trash TMDL.

Potential Capital Facility Costs and Operation & Maintenance Requirements

Facilities

- Capital costs will vary substantially depending on the size of the facility and characteristics of the drainage system. Significant capital costs may be associated with purchasing water trucks, vacuum trucks, and any other necessary cleaning equipment or improving the drainage infrastructure to reduce the potential .

- Developing and implementing a site specific drainage system maintenance plan will require additional capital if a similar program is not already in place.

Maintenance

- Two-person teams may be required to clean catch basins with vactor trucks.
- Teams of at least two people plus administrative personnel are required to identify illicit discharges, depending on the complexity of the storm sewer system.
- Arrangements must be made for proper disposal of collected wastes.
- Technical staff are required to detect and investigate illegal dumping violations.
- Methods used for illicit connection detection (smoke testing, dye testing, visual inspection, and flow monitoring) can be costly and time-consuming. Site-specific factors, such as the level of impervious area, the density and ages of buildings, and type of land use will determine the level of investigation necessary.

Supplemental Information

Storm Drain Flushing

Flushing is a common maintenance activity used to improve pipe hydraulics and to remove pollutants in storm drainage systems. Flushing may be designed to hydraulically convey accumulated material to strategic locations, such as an open channel, another point where flushing will be initiated, or the sanitary sewer and the treatment facilities, thus preventing re-suspension and overflow of a portion of the solids during storm events. Flushing prevents "plug flow" discharges of concentrated pollutant loadings and sediments. Deposits can hinder the designed conveyance capacity of the storm drain system and potentially cause backwater conditions in severe cases of clogging.

Storm drain flushing usually takes place along segments of pipe with grades that are too flat to maintain adequate velocity to keep particles in suspension. An upstream manhole is selected to place an inflatable device that temporarily plugs the pipe. Further upstream, water is pumped into the line to create a flushing wave. When the upstream reach of pipe is sufficiently full to cause a flushing wave, the inflated device is rapidly deflated with the assistance of a vacuum pump, thereby releasing the backed up water and resulting in the cleaning of the storm drain segment.

To further reduce impacts of stormwater pollution, a second inflatable device placed well downstream may be used to recollect the water after the force of the flushing wave has dissipated. A pump may then be used to transfer the water and accumulated material to the sanitary sewer for treatment. In some cases, an interceptor structure may be more practical or required to recollect the flushed waters.

It has been found that cleansing efficiency of periodic flush waves is dependent upon flush volume, flush discharge rate, sewer slope, sewer length, sewer flow rate, sewer diameter, and population density. As a rule of thumb, the length of line to be flushed should not exceed 700 feet. At this maximum recommended length, the percent removal efficiency ranges between 65-75% for organics and 55-65% for dry weather grit/inorganic material. The percent removal efficiency drops rapidly beyond that. Water is commonly supplied by a water truck, but fire hydrants can also supply water. To make the best use of water, it is recommended that reclaimed water be used if allowed or that fire hydrant line flushing coincide with storm sewer flushing.

EXECUTIVE SUMMARY

Urban Crossroads, Inc. has prepared this noise study to determine the noise exposure and the necessary noise mitigation measures for the proposed Thrifty Oil Warehouse development ("Project"). The Project site is located on the southeast corner of Tobacco Road and Placentia Avenue at 23641 Placentia Avenue in unincorporated County of Riverside. The proposed Project includes the development of a 186,695-square-foot warehouse building which includes 171,695 square feet of warehousing use and 15,000 square feet of office space (7,500 square feet on first and second floors). This noise study has been prepared to satisfy applicable County of Riverside noise standards and significance criteria based on Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1)

The results of this Noise and Vibration Analysis are summarized below based on the significance criteria in Section 4 of this report consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) Table ES-1 shows the findings of significance for each potential noise and/or vibration impact under CEQA before and after any required mitigation measures.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

Analysis	Report Section	Significance Findings

1 INTRODUCTION

This noise analysis has been completed to determine the noise impacts associated with the development of the proposed Thrifty Oil Warehouse ("Project"). This noise study briefly describes the proposed Project, provides information regarding noise fundamentals, sets out the local regulatory setting, presents the study methods and procedures for transportation related CNEL traffic noise analysis, and evaluates the future exterior noise environment. In addition, this study includes an analysis of the potential Project-related long-term stationary-source operational noise and short-term construction noise and vibration impacts.

1.1 SITE LOCATION

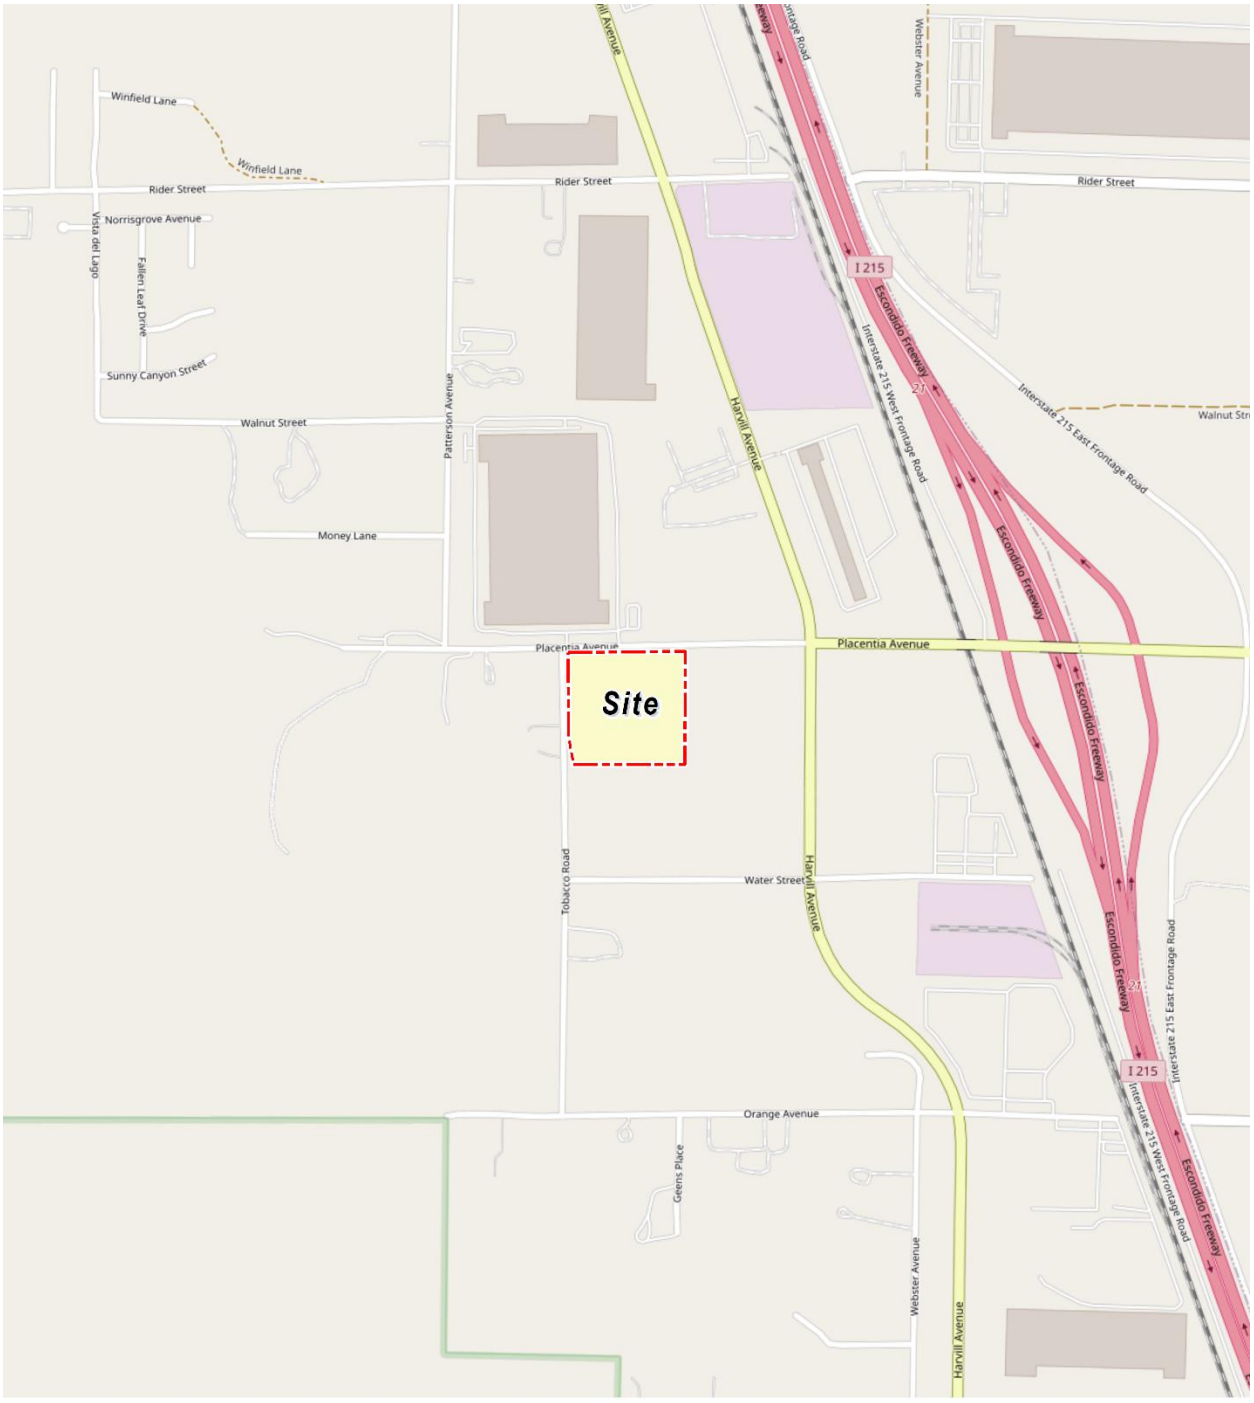
The proposed project is located on the southeast corner of Tobacco Road and Placentia Avenue at 23641 Placentia Avenue in unincorporated County of Riverside, as shown on Exhibit 1-A.

1.2 PROJECT DESCRIPTION

The proposed Project includes the development of a 186,695-square-foot warehouse building which includes 171,695 square feet of warehousing use and 15,000 square feet of office space (7,500 square feet on first and second floors). A preliminary site plan for the proposed Project is shown on Exhibit 1-B. The Project is anticipated to have an Opening Year of 2026

The on-site Project-related noise sources are expected to include: loading dock activity, roof-top air conditioning units, parking lot vehicle activities, trash enclosure activity, and truck movements. This noise analysis is intended to describe the noise level impacts associated with the expected typical operational activities at the Project site.

EXHIBIT 1-A: LOCATION MAP



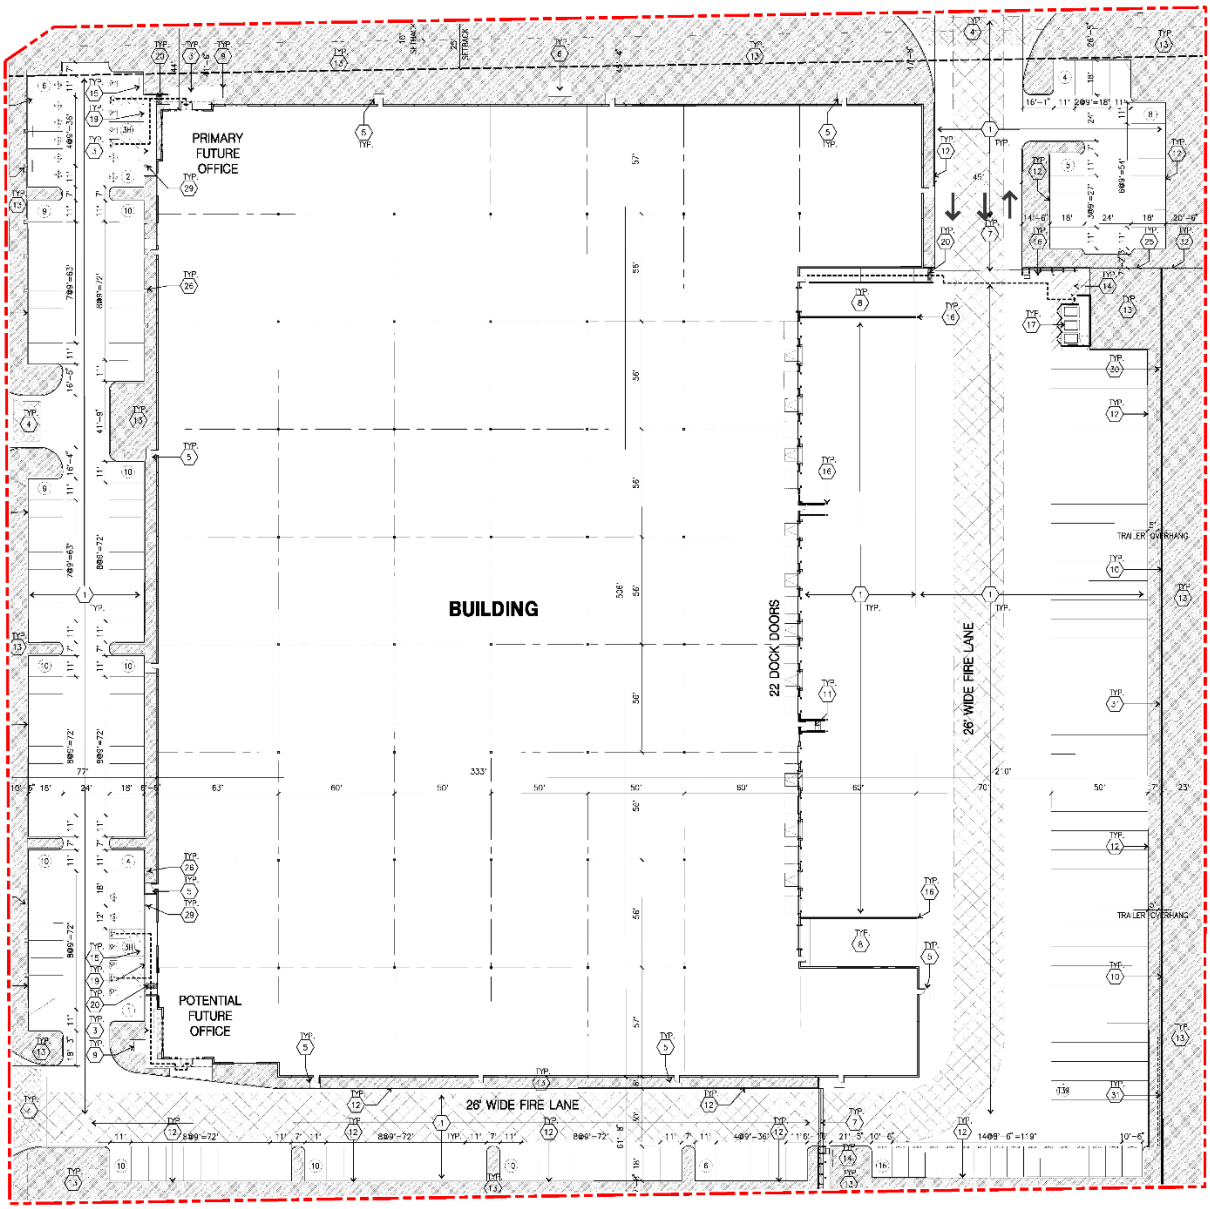


EXHIBIT 1-B: PRELIMINARY SITE PLAN

2 FUNDAMENTALS

Noise is simply defined as *unwanted sound*. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). A-weighted decibels (dBA) approximate the subjective response of the human ear to broad frequency noise source by discriminating against very low and very high frequencies of the audible spectrum. They are adjusted to reflect only those frequencies which are audible to the human ear. Exhibit 2-A presents a summary of the typical noise levels and their subjective loudness and effects that are described in more detail below.

EXHIBIT 2-A: TYPICAL NOISE LEVELS

COMMON OUTDOOR ACTIVITIES	COMMON INDOOR ACTIVITIES	A - WEIGHTED SOUND LEVEL dBA	SUBJECTIVE LOUDNESS	EFFECTS OF NOISE
THRESHOLD OF PAIN		140	INTOLERABLE OR DEAFENING	HEARING LOSS
NEAR JET ENGINE		130		
		120		
JET FLY-OVER AT 300m (1000 ft)	ROCK BAND	110		
LOUD AUTO HORN		100	VERY NOISY	
GAS LAWN MOWER AT 1m (3 ft)		90		
DIESEL TRUCK AT 15m (50 ft), at 80 km/hr (50 mph)	FOOD BLENDER AT 1m (3 ft)	80		SPEECH INTERFERENCE
NOISY URBAN AREA, DAYTIME	VACUUM CLEANER AT 3m (10 ft)	70	LOUD	
HEAVY TRAFFIC AT 90m (300 ft)	NORMAL SPEECH AT 1m (3 ft)	60		
QUIET URBAN DAYTIME	LARGE BUSINESS OFFICE	50	MODERATE	SLEEP DISTURBANCE
QUIET URBAN NIGHTTIME	THEATER, LARGE CONFERENCE ROOM (BACKGROUND)	40		
QUIET SUBURBAN NIGHTTIME	LIBRARY	30	FAINT	NO EFFECT
QUIET RURAL NIGHTTIME	BEDROOM AT NIGHT, CONCERT HALL (BACKGROUND)	20		
	BROADCAST/RECORDING STUDIO	10	VERY FAINT	
LOWEST THRESHOLD OF HUMAN HEARING	LOWEST THRESHOLD OF HUMAN HEARING	0		

Source: Environmental Protection Agency Office of Noise Abatement and Control, Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety (EPA/ONAC 550/9-74-004) March 1974.

2.1 RANGE OF NOISE

Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The scale for measuring intensity is the decibel scale. Each interval of 10 decibels indicates a sound energy ten times greater than before, which is perceived by the human ear as being roughly twice as loud. (2) The most common sounds vary between 40 dBA (very quiet) to 100 dBA (very loud). Normal conversation at three feet is roughly at 60 dBA, while loud jet engine noises equate to 110 dBA

at approximately 1,000 feet, which can cause serious discomfort. (3) Another important aspect of noise is the duration of the sound and the way it is described and distributed in time.

2.2 NOISE DESCRIPTORS

Environmental noise descriptors are generally based on averages, rather than instantaneous, noise levels. The most used metric is the equivalent level (L_{eq}). Equivalent sound levels are not measured directly but are calculated from sound pressure levels typically measured in A-weighted decibels (dBA). The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period and is commonly used to describe the "average" noise levels within the environment.

Peak hour or average noise levels, while useful, do not completely describe a given noise environment. Noise levels lower than peak hour may be disturbing if they occur during times when quiet is most desirable, namely evening and nighttime (sleeping) hours. To account for this, the Community Noise Equivalent Level (CNEL), representing a composite 24-hour noise level is utilized. The CNEL is the weighted average of the intensity of a sound, with corrections for time of day, and averaged over 24 hours. The time-of-day corrections require the addition of 5 decibels to dBA L_{eq} sound levels in the evening from 7:00 p.m. to 10:00 p.m., and the addition of 10 decibels to dBA L_{eq} sound levels at night between 10:00 p.m. and 7:00 a.m. These additions are made to account for the noise sensitive time periods during the evening and night hours when noise can become more intrusive. CNEL does not represent the actual sound level heard at any time, but rather represents the total sound exposure. The County of Riverside relies on the 24-hour CNEL level to assess land use compatibility with transportation related noise sources.

2.3 SOUND PROPAGATION

When sound propagates over a distance, it changes in level and frequency content. The way noise reduces with distance depends on the following factors.

2.3.1 GEOMETRIC SPREADING

Sound from a localized source (i.e., a stationary point source) propagates uniformly outward in a spherical pattern. The sound level attenuates (or decreases) at a rate of 6 dB for each doubling of distance from a point source. Highways consist of several localized noise sources on a defined path and hence can be treated as a line source, which approximates the effect of several point sources. Noise from a line source propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of 3 dB for each doubling of distance from a line source. (2)

2.3.2 GROUND ABSORPTION

The propagation path of noise from a highway to a receiver is usually very close to the ground. Noise attenuation from ground absorption and reflective wave canceling adds to the attenuation associated with geometric spreading. Traditionally, the excess attenuation has also been expressed in terms of attenuation per doubling of distance. This approximation is usually

sufficiently accurate for distances of less than 200 ft. For acoustically hard sites (i.e., sites with a reflective surface between the source and the receiver, such as a parking lot or body of water), no excess ground attenuation is assumed. For acoustically absorptive or soft sites (i.e., those sites with an absorptive ground surface between the source and the receiver such as soft dirt, grass, or scattered bushes and trees), an excess ground attenuation value of 1.5 dB per doubling of distance is normally assumed. When added to the cylindrical spreading, the excess ground attenuation results in an overall drop-off rate of 4.5 dB per doubling of distance from a line source. (4)

2.3.3 ATMOSPHERIC EFFECTS

Receivers located downwind from a source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels. Sound levels can be increased at large distances (e.g., more than 500 feet) due to atmospheric temperature inversion (i.e., increasing temperature with elevation). Other factors such as air temperature, humidity, and turbulence can also have significant effects. (2)

2.3.4 SHIELDING

A large object or barrier in the path between a noise source and a receiver can substantially attenuate noise levels at the receiver. The amount of attenuation provided by shielding depends on the size of the object and the frequency content of the noise source. Shielding by trees and other such vegetation typically only has an "out of sight, out of mind" effect. That is, the perception of noise impact tends to decrease when vegetation blocks the line-of-sight to nearby residents. However, for vegetation to provide a substantial, or even noticeable, noise reduction, the vegetation area must be at least 15 feet in height, 100 feet wide and dense enough to completely obstruct the line-of-sight between the source and the receiver. This size of vegetation may provide up to 5 dBA of noise reduction. The Federal Highway Administration (FHWA) does not consider the planting of vegetation to be a noise abatement measure. (5)

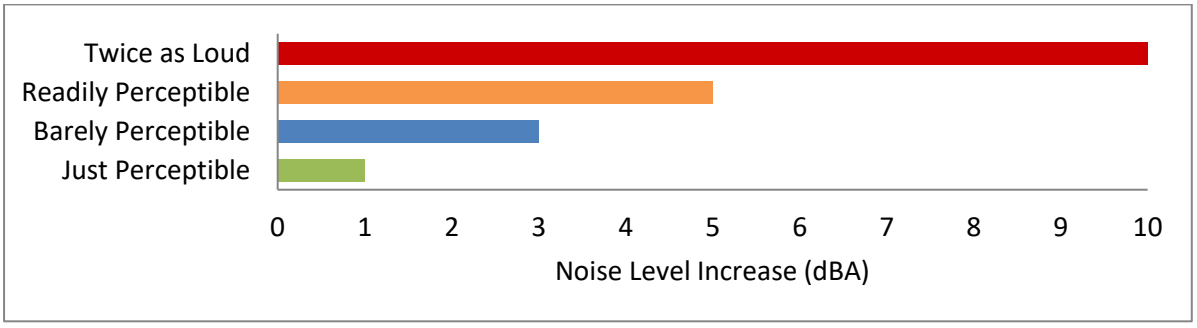
2.4 NOISE CONTROL

Noise control is the process of obtaining an acceptable noise environment for an observation point or receiver by controlling the noise source, transmission path, receiver, or all three. This concept is known as the source-path-receiver concept. In general, noise control measures can be applied to these three elements.

2.5 NOISE BARRIER ATTENUATION

Effective noise barriers can reduce noise levels by 10 to 15 dBA, cutting the loudness of traffic noise in half. A noise barrier is most effective when placed close to the noise source or receiver. Noise barriers, however, do have limitations. For a noise barrier to work, it must block the line-of-sight path of sound from the noise source.

2.6 LAND USE COMPATIBILITY WITH NOISE



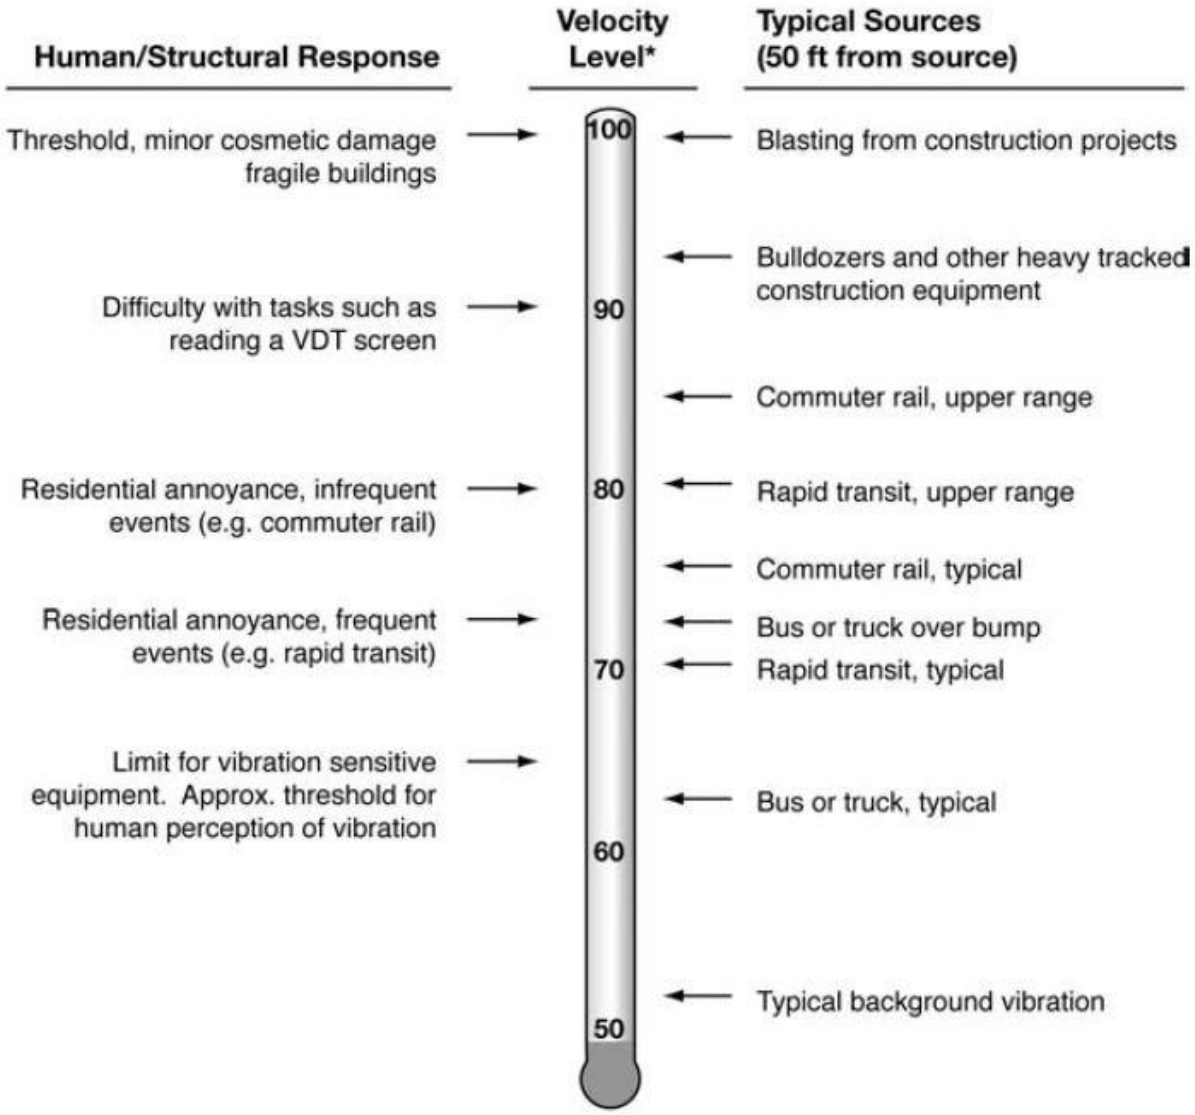
Some land uses are more tolerant of noise than others. For example, schools, hospitals, churches, and residences are more sensitive to noise intrusion than are commercial or industrial developments and related activities. As ambient noise levels affect the perceived amenity or livability of a development, so too can the mismanagement of noise impacts impair the economic health and growth potential of a community by reducing the area's desirability as a place to live, shop and work. For this reason, land use compatibility with the noise environment is an important consideration in the planning and design process. The FHWA encourages State and Local government to regulate land development in such a way that noise-sensitive land uses are either prohibited from being located adjacent to a highway, or that the developments are planned, designed, and constructed in such a way that noise impacts are minimized. (6)

2.7 COMMUNITY RESPONSE TO NOISE

Approximately sixteen percent of the population has a very low tolerance for noise and will object to any noise not of their making. Consequently, even in the quietest environment, some complaints may occur. Twenty to thirty percent of the population will not complain even in very severe noise environments. (7 pp. 8-6) Thus, a variety of reactions can be expected from people exposed to any given noise environment.

Surveys have shown that community response to noise varies from no reaction to vigorous action for newly introduced noises averaging from 10 dB below existing to 25 dB above existing. (8) According to research originally published in the Noise Effects Handbook (7), the percentage of high annoyance ranges from approximately 0 percent at 45 dB or less, 10 percent are highly annoyed around 60 dB, and increases rapidly to approximately 70 percent being highly annoyed at approximately 85 dB or greater. Despite this variability in behavior on an individual level, the population can be expected to exhibit the following responses to changes in noise levels as shown on Exhibit 2-B. A change of 3 dBA is considered barely perceptible, and changes of 5 dBA are considered readily perceptible. (4)

EXHIBIT 2-B: NOISE LEVEL INCREASE PERCEPTION



2.8 VIBRATION

Per the Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual*, vibration is the periodic oscillation of a medium or object. The rumbling sound caused by the vibration of room surfaces is called structure-borne noise. Sources of ground-borne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or human-made causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous, such as factory machinery, or transient, such as explosions. As is the case with airborne sound, ground-borne vibrations may be described by amplitude and frequency.

Additionally, in contrast to airborne noise, ground-borne vibration outdoors is not a common environmental problem and annoyance from ground-borne vibration is almost exclusively an indoor phenomenon (8). Therefore, the effects of vibrations should only be evaluated at a structure and the effects of the building structure on the vibration should be considered. Wood-frame buildings, such as typical residential structures, are more easily excited by ground vibration than heavier buildings. In contrast, large masonry buildings with spread footings have a low response to ground vibration (8). In general, the heavier a building is, the lower the response will be to the incident vibration energy. However, all structurers reduce vibration levels due to the coupling of the building to the soil. There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal (8). The PPV is most frequently used to describe vibration impacts to buildings but is not always suitable for evaluating human response (annoyance) because it takes some time for the human body to respond to vibration signals. Instead, the human body responds to average vibration amplitude often described as the root mean square (RMS). The RMS amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body (8). However, the RMS amplitude and PPV are related mathematically, and the RMS amplitude of equipment is typically calculated from the PPV reference level. The RMS amplitude is approximately 70% of the PPV (9). Thus, either can be used in the description of vibration impacts.

While not universally accepted, vibration decibel notation (VdB) is another vibration notation developed and used by the FTA in their guidance manual to describe vibration levels and provide a background of common vibration levels and set vibration limits. (8) Decibel notation (VdB) serves to reduce the range of numbers used to describe vibration levels and is used in this report to describe vibration levels. As stated in the FTA guidance manual, the background vibration-velocity level in residential areas is generally 50 VdB. Ground-borne vibration is normally perceptible to humans at approximately 65 VdB. For most people, a vibration-velocity level of 75 VdB is the approximate dividing line between barely perceptible and distinctly perceptible levels. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If a roadway is smooth, the ground-borne vibration is rarely perceptible. The range of interest is from approximately 50 VdB, which is the typical background vibration-velocity level, to 100 VdB, which is the general threshold where minor damage can occur in fragile buildings. Exhibit 2-C illustrates common vibration sources and the human and structural response to ground-borne vibration.

EXHIBIT 2-C: TYPICAL LEVELS OF GROUND-BORNE VIBRATION

3 REGULATORY SETTING

To limit population exposure to physically and/or psychologically damaging as well as intrusive noise levels, the federal government, the State of California, various county governments, and most municipalities in the state have established standards and ordinances to control noise. In most areas, automobile and truck traffic is the major source of environmental noise. Traffic activity generally produces an average sound level that remains constant with time. Air and rail traffic, and commercial and industrial activities are also major sources of noise in some areas. Federal, state, and local agencies regulate different aspects of environmental noise. Federal and state agencies generally set noise standards for mobile sources such as aircraft and motor vehicles, while regulation of stationary sources is left to local agencies.

3.1 STATE OF CALIFORNIA NOISE REQUIREMENTS

The State of California regulates freeway noise, sets standards for sound transmission, provides occupational noise control criteria, identifies noise standards, and provides guidance for local land use compatibility. State law requires that each county and city adopt a General Plan that includes a Noise Element which is to be prepared per guidelines adopted by the Governor's Office of Planning and Research (OPR). (10) OPR identifies suggested land use noise compatibility levels as part of its General Plan Guidelines. These suggested guidelines provide planners with a tool to gauge the compatibility of land uses relative to existing and future noise levels. The guidelines identify normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable noise levels for various land uses. The land use compatibility guidelines are intended to be an advisory resource when considering changes in land use and policies, such as zoning modifications. In addition, the State through the California Environmental Quality Act (CEQA) requires that all known environmental effects of a project be analyzed, including environmental noise impacts.

3.2 COUNTY OF RIVERSIDE GENERAL PLAN NOISE ELEMENT

The County of Riverside has adopted a Noise Element of the General Plan to control and abate environmental noise, and to protect the citizens of the County of Riverside from excessive exposure to noise. (11) The Noise Element specifies the maximum allowable exterior noise levels for new developments impacted by transportation noise sources such as arterial roads, freeways, airports, and railroads. In addition, the Noise Element identifies several polices to minimize the impacts of excessive noise levels throughout the community and establishes noise level requirements for all land uses. To protect County of Riverside residents from excessive noise, the Noise Element contains the following policies related to the Project:

N 1.1 Protect noise-sensitive land uses from high levels of noise by restricting noise-producing land uses from these areas. If the noise-producing land use cannot be relocated, then noise buffers such as setbacks, landscaping, or block walls shall be used.

N 1.3 Consider the following uses noise-sensitive and discourage these uses in areas in excess of 65 CNEL:

- *Schools*

- *Hospitals*
- *Rest Homes*
- *Long Term Care Facilities*
- *Mental Care Facilities*
- *Residential Uses*
- *Libraries*
- *Passive Recreation Uses*
- *Places of Worship*

N 1.5 Prevent and mitigate the adverse impacts of excessive noise exposure on the residents, employees, visitors, and noise-sensitive uses of Riverside County.

N 4.1 Prohibit facility-related noise, received by any sensitive use, from exceeding the following worst-case noise levels:

a. 45 dBA 9-minute L_{eq} between 10:00 p.m. and 7:00 a.m.;

b. 65 dBA 9-minute L_{eq} between 7:00 a.m. and 10:00 p.m.

N 13.1 Minimize the impacts of construction noise on adjacent uses within acceptable standards.

N 13.2 Ensure that construction activities are regulated to establish hours of operation in order to prevent and/or mitigate the generation of excessive or adverse impacts on surrounding areas.

N 13.3 Condition subdivision approval adjacent to developed/occupied noise-sensitive land uses (see policy N 1.3) by requiring the developer to submit a construction-related noise mitigation plan to the [County] for review and approval prior to issuance of a grading permit. The plan must depict the location of construction equipment and how the noise from this equipment will be mitigated during construction of this project, through the use of such methods as:

i. Temporary noise attenuation fences;

ii. Preferential location and equipment; and

iii. Use of current noise suppression technology and equipment.

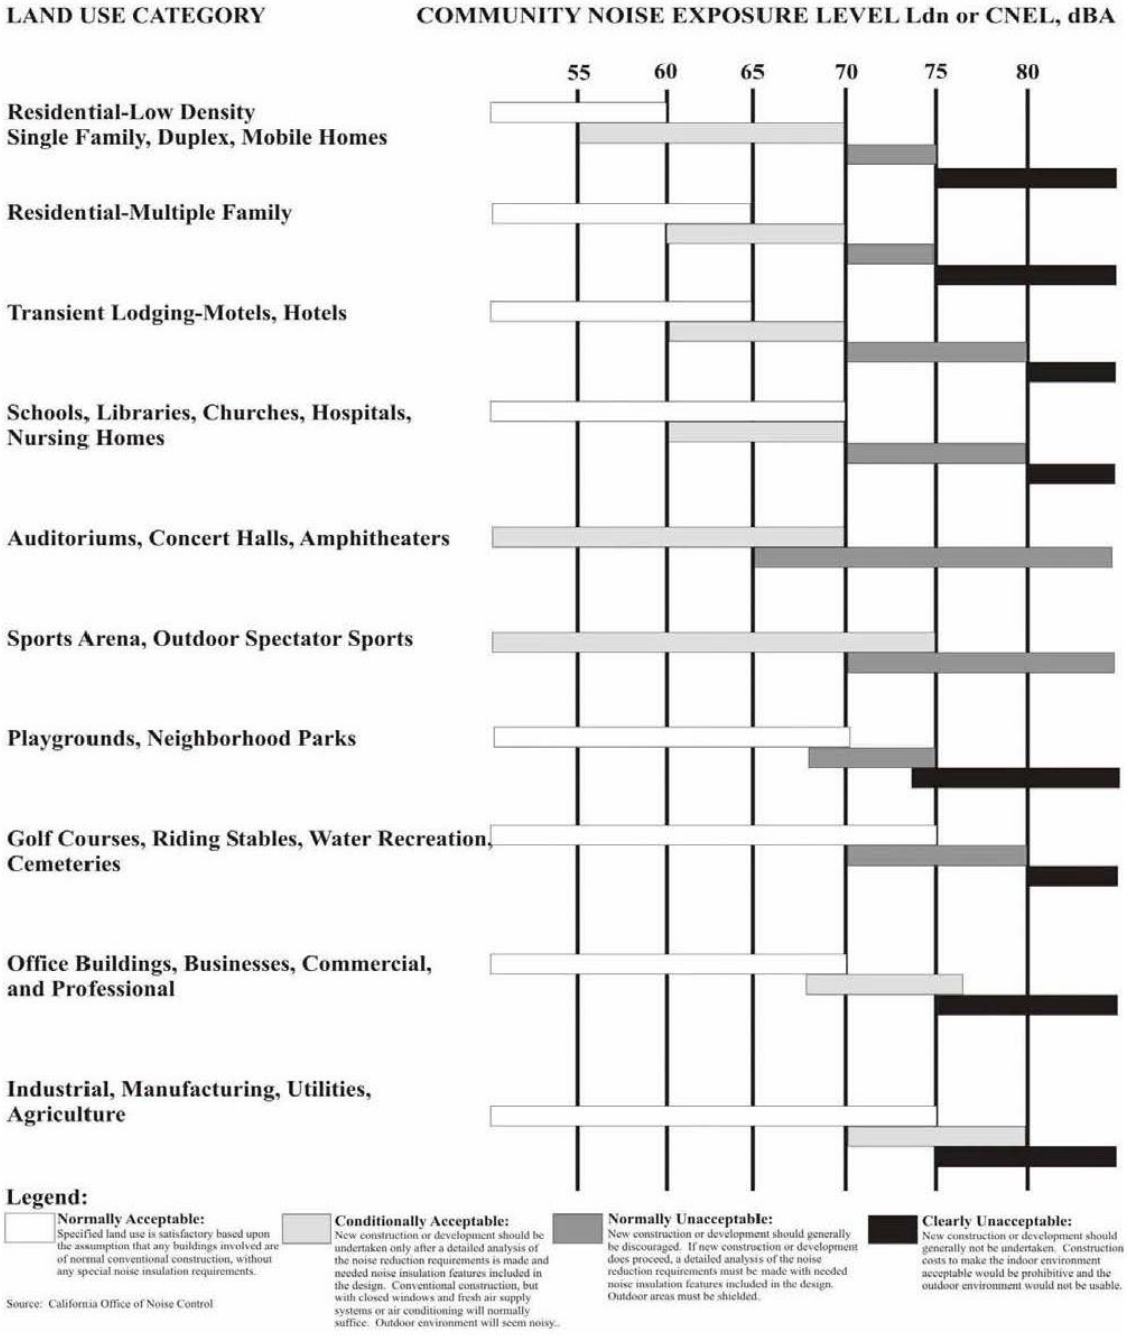
N 14.1 Enforce the California Building Standards that sets standards for building construction to mitigate interior noise levels to the tolerable 45 CNEL limit. These standards are utilized in conjunction with the Uniform Building Code by the County's Building Department to ensure that noise protection is provided to the public. Some design features may include extra-dense insulation, double-paned windows, and dense construction materials.

N 16.3 Prohibit exposure of residential dwellings to perceptible ground vibration from passing trains as perceived at the ground or second floor. Perceptible motion shall be presumed to be a motion velocity of 0.01 inches/second over a range of 1 to 100 Hz.

To ensure noise-sensitive land uses are protected from high levels of noise (N 1.1), Table N-1 of the Noise Element identifies guidelines to evaluate proposed developments based on exterior and interior noise level limits for land uses and requires a noise analysis to determine needed mitigation measures if necessary. The Noise Element identifies residential use as noise-sensitive land use (N 1.3) and discourages new development in areas with transportation related levels of 65 dBA CNEL or greater existing ambient noise levels. To prevent and mitigate noise impacts for its residents (N 1.5), County of Riverside requires exterior noise attenuation measures for sensitive land use exposed to transportation related noise levels higher than 65 dBA CNEL. In addition, the County of Riverside had adopted an interior noise level limit of 45 dBA CNEL (N 14.1).

Policy N 4.1 of the Noise Element sets a stationary-source exterior noise limit to not to be exceeded for a cumulative period of more than ten minutes in any hour of 65 dBA L_{eq} for daytime hours of 7:00 a.m. to 10:00 p.m., and 45 dBA L_{eq} during the noise-sensitive nighttime hours of 10:00 p.m. to 7:00 a.m. To prevent high levels of construction noise from impacting noise-sensitive land uses, policies N 13.1 through 13.3 identify construction noise mitigation requirements for new development located near existing noise-sensitive land uses. (11)

3.2.1 LAND USE COMPATIBILITY GUIDELINES



The noise criteria identified in the County of Riverside Noise Element (Table N-1) are guidelines to evaluate the land use compatibility of transportation related noise. The compatibility criteria, shown on Exhibit 3-A, provides the County with a planning tool to gauge the compatibility of land uses relative to existing and future exterior noise levels. The *Land Use Compatibility for Community Noise Exposure* matrix describes categories of compatibility and not specific noise standards. Non-noise sensitive light industrial use of the Project is considered *normally acceptable* with unmitigated exterior noise levels of less than 75 dBA CNEL based on the *Industrial, Manufacturing, Utilities, Agriculture* land use compatibility criteria shown on Exhibit 3-A. Noise sensitive residential designated land uses in the Project study area are considered *normally acceptable* with exterior noise levels below 60 dBA CNEL, and *conditionally acceptable* with exterior noise levels of up to 70 dBA CNEL. (11)

3.3.2 COUNTY OF RIVERSIDE STATIONARY NOISE STANDARDS

The County of Riverside has set stationary-source hourly average L_{eq} exterior noise limits to control loading dock activity, roof-top air conditioning units, parking lot vehicle activities, trash enclosure activity, and truck movements associated with the development of the proposed Thrifty Oil Warehouse. The County considers noise generated using motor vehicles to be a stationary noise source when operated on private property such as at a loading dock. These facility-related noises, as projected to any portion of any surrounding property containing a *habitable dwelling, hospital, school, library or nursing home*, must not exceed the following worst-case noise levels. Policy N 4.1 of the County of Riverside General Plan Noise Element sets a stationary-source average L_{eq} exterior noise limit not to be exceeded for a cumulative period of more than ten minutes in any hour of 65 dBA L_{eq} for daytime hours of 7:00 a.m. to 10:00 p.m., and 45 dBA L_{eq} during the noise-sensitive nighttime hours of 10:00 p.m. to 7:00 a.m. (11)

The County of Riverside County Code Section 9.52.040 *General sound level standards* (included in Appendix 3.1) summarizing Ordinance No. 847 *Regulating Noise* identify lower, more restrictive exterior noise level standards, which for the purpose of this report, are used to evaluate potential Project-related operational noise level limits instead of the higher General Plan exterior noise level standards previously identified. The County of Riverside County Code identifies residential exterior noise level limits of 55 dBA L_{eq} during the daytime hours of 7:00 a.m. to 10:00 p.m., and 45 dBA L_{eq} during the noise-sensitive nighttime hours of 10:00 p.m. to 7:00 a.m., commercial exterior noise level limits of 65 dBA L_{eq} during the daytime hours, and 55 dBA L_{eq} during the noise-sensitive nighttime hours, and public facility exterior noise level limits of 65 dBA L_{eq} during the daytime hours, and 45 dBA L_{eq} during the noise-sensitive nighttime hours. (12).

EXHIBIT 3-A: LAND USE COMPATIBILITY FOR COMMUNITY NOISE EXPOSURE

Source: County of Riverside General Plan Noise Element, Table N-1.

Based on several discussions with the County of Riverside Department of Environmental Health (DEH), Office of Industrial Hygiene (OIH), it is important to recognize that the County of Riverside County Code noise level standards, incorrectly identify maximum noise level (L_{max}) standards that should instead reflect the average L_{eq} noise levels. Moreover, the County of Riverside DEH OIH's April 15th, 2015, *Requirements for determining and mitigating, non-transportation noise source impacts to residential properties* also identifies operational (stationary-source) noise level limits using the L_{eq} metric, consistent with the direction of the County of Riverside General Plan guidelines and standards provided in the Noise Element. Therefore, this report has been prepared consistent with direction of the County of Riverside DEH OIH guidelines and standards using the average L_{eq} noise level metric for stationary-source (operational) noise level evaluation.

3.3 CONSTRUCTION NOISE STANDARDS

To control noise impacts associated with the construction of the proposed Project, the County of Riverside has established limits to the hours of construction activities. Riverside County Ordinance No. 847 Regulating Noise Section 2i (Code Section 9.52.020[I]) indicates that noise associated with any private construction activity located within one-quarter of a mile from an inhabited dwelling is considered exempt between the hours of 6:00 a.m. and 6:00 p.m., during the months of June through September, and 7:00 a.m. and 6:00 p.m., during the months of October through May. (12) Neither the County's General Plan nor County Code establish numeric maximum acceptable construction source noise levels at potentially affected receivers for CEQA analysis purposes. Therefore, a numerical construction threshold based on Federal Transit Administration (FTA) *Transit Noise and Vibration Impact Assessment Manual* is used for analysis of daytime construction impacts, as discussed below.

According to the FTA, local noise ordinances are typically not very useful in evaluating construction noise. They usually relate to nuisance and hours of allowed activity, and sometimes specify limits in terms of maximum levels, but are generally not practical for assessing the impact of a construction project. Project construction noise criteria should account for the existing noise environment, the absolute noise levels during construction activities, the duration of the construction, and the adjacent land use. Due to the lack of standardized construction noise thresholds, the FTA provides guidelines that can be considered reasonable criteria for construction noise assessment. The FTA considers a daytime exterior construction noise level of 80 dBA L_{eq} as a reasonable threshold for noise sensitive residential land use with a nighttime exterior construction noise level of 70 dBA L_{eq}. (8 p. 179)

3.4 CONSTRUCTION VIBRATION STANDARDS

Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment such as air compressors, light trucks, hydraulic loaders, etc., generates little or no ground vibration. (8) To analyze vibration impacts originating from the operation and construction of the Thrifty Oil Warehouse, vibration-generating activities are appropriately evaluated against standards established under the Municipal Code if such standards exist.

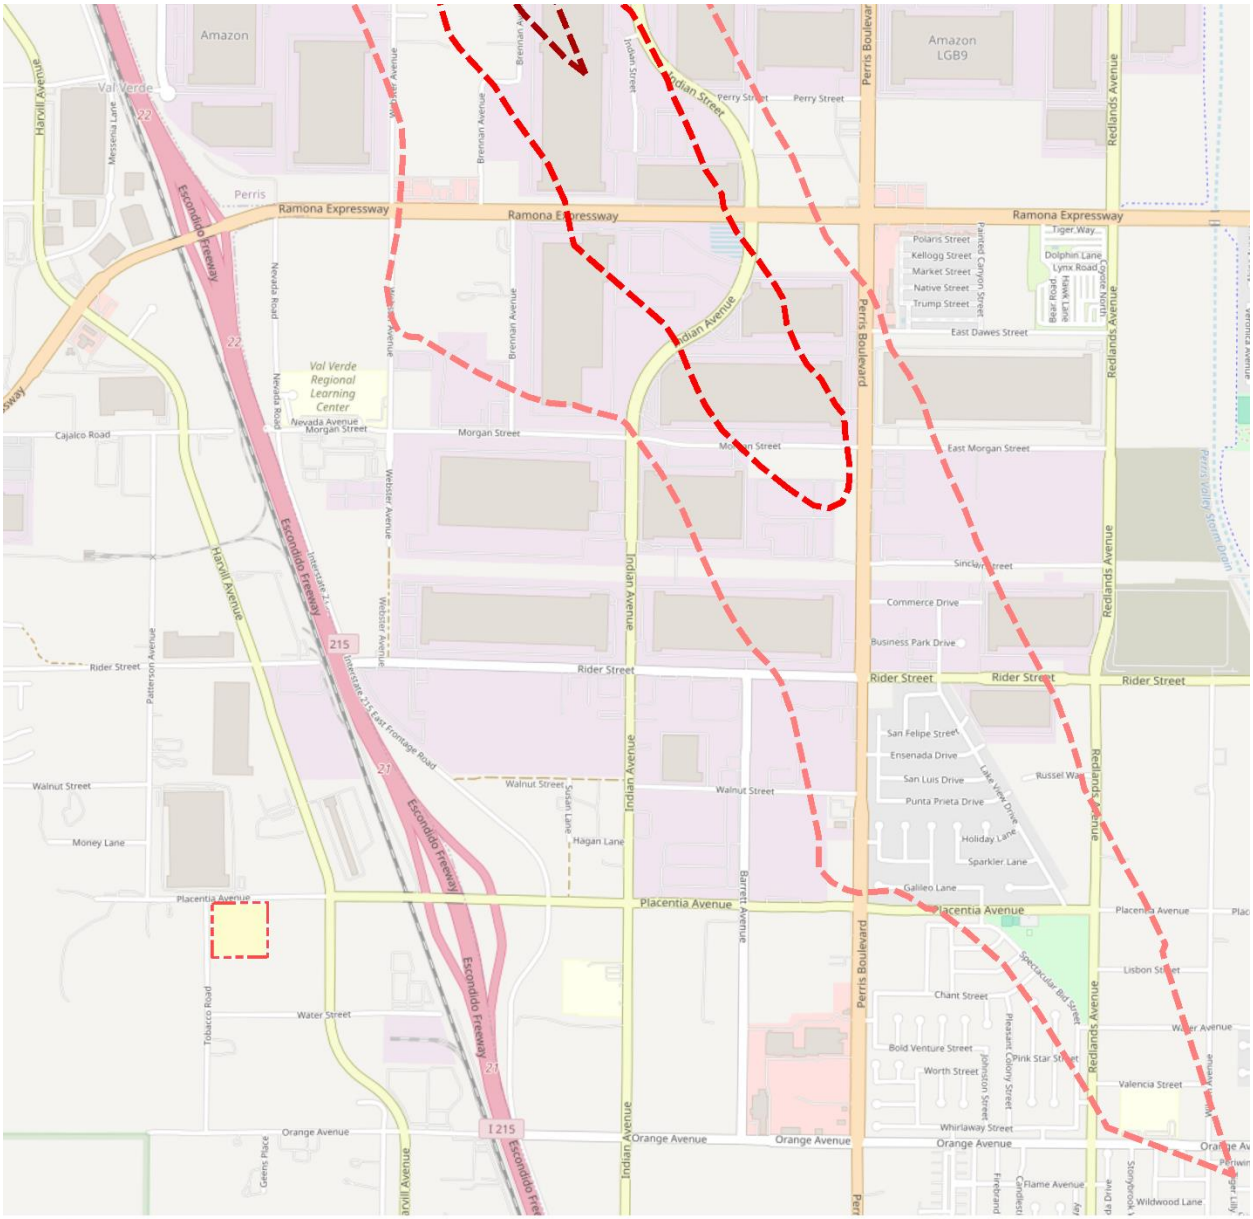
However, the County of Riverside does not identify specific construction vibration level limits. Therefore, for analysis purposes, the Caltrans *Transportation and Construction Vibration Guidance Manual*, (9 p. 38) Table 19, vibration damage are used in this noise study to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

3.5 MARCH AIR RESERVE BASE/INLAND PORT AIRPORT LAND USE COMPATIBILITY

The March Air Reserve Base/Inland Port Airport (MARB/IPA) runway is located approximately 2.9 miles northeast of the Project site. The *Riverside County Airport Land Use Compatibility Plan Policy Document* (RC ALUCP) includes the policies for determining the land use compatibility of the Project. Policy 4.1.5 *Noise Exposure for Other Land Uses* of the RC ALUCP requires that land uses demonstrate compatibility with the acceptable noise levels on Table 2B. The Table 2B *Supporting Compatibility Criteria: Noise* matrix is shown on Exhibit 3-B and indicates that the Project's industrial land uses experience *clearly acceptable* exterior noise levels below 60 dBA CNEL. *Normally acceptable* noise levels for industrial land use range from 60 to 65 dBA CNEL. *Marginally acceptable* noise levels at industrial land uses range from 65 to 70 dBA CNEL. (14)

The 70, 65 and 60 dBA CNEL noise contour boundaries used to determine the potential aircraft-related noise impacts at the Project site are found on Figure 6-9 of the *March Air Reserve Base 2018 Final Air Installations Compatible Uses Zones Study* and are presented on Exhibit 3-C of this report. (15) Based on the 2018 noise level contours for the MARB/IPA, the Project development area is located outside the 60 dBA CNEL noise level contour boundaries and the Project's industrial land uses are considered *clearly acceptable.*

EXHIBIT 3-B: RC ALUCP SUPPORTING COMPATIBILITY CRITERIA: NOISE



Land Use Category	CNEL (dB) 50–55	55–60	60–65	65–70	70–75
Residential *					
single-family, nursing homes, mobile homes	++	o	–	– –	– –

outdoor spectator sports	++	+	+	o	–
amphitheaters	+	o	–	– –	– –

Land Use Acceptability		Interpretation/Comments
++	*Clearly Acceptable*	The activities associated with the specified land use can be carried out with essentially no interference from the noise exposure.
+	*Normally Acceptable*	Noise is a factor to be considered in that slight interference with outdoor activities may occur. Conventional construction methods will eliminate most noise intrusions upon indoor activities.
o	*Marginally Acceptable*	The indicated noise exposure will cause moderate interference with outdoor activities and with indoor activities when windows are open. The land use is acceptable on the conditions that outdoor activities are minimal and construction features which provide sufficient noise attenuation are used (e.g., installation of air conditioning so that windows can be kept closed). Under other circumstances, the land use should be discouraged.
–	*Normally Unacceptable*	Noise will create substantial interference with both outdoor and indoor activities. Noise intrusion upon indoor activities can be mitigated by requiring special noise insulation construction. Land uses which have conventionally constructed structures and/or involve outdoor activities which would be disrupted by noise should generally be avoided.
– –	*Clearly Unacceptable*	Unacceptable noise intrusion upon land use activities will occur. Adequate structural noise insulation is not practical under most circumstances. The indicated land use should be avoided unless strong overriding factors prevail and it should be prohibited if outdoor activities are involved.

* Subtract 5 dB for low-activity outlying airports (Chiriaco Summit and Desert Center)

4 SIGNIFICANCE CRITERIA

The following significance criteria are based on currently adopted guidance provided by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. (1) For the purposes of this report, impacts would be potentially significant if the Project results in or causes:

A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

B. Generation of excessive ground-borne vibration or ground-borne noise levels?

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

4.1 NOISE LEVEL INCREASES (THRESHOLD A)

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines described above at the closest sensitive receiver locations. Under CEQA, consideration must be given to the magnitude of the increase, the existing baseline ambient noise levels, and the location of noise-sensitive receivers to determine if a noise increase represents a significant adverse environmental impact. This approach recognizes *that there is no single noise increase that renders a noise impact significant.* (16) This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called *ambient* environment. In general, the more a new noise level exceeds the previously existing ambient noise level, the less acceptable the new noise level will typically be judged.

4.1.1 NOISE-SENSITIVE RECEIVERS

The Federal Interagency Committee on Noise (FICON) (17) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level (L_{eq}).

As previously stated, the approach used in this noise study recognizes *that there is no single noise increase that renders a noise impact significant*, based on a 2008 California Court of Appeal ruling on Gray v. County of Madera. (16) For example, if the ambient noise environment is quiet (<60 dBA) and the new noise source greatly increases the noise levels, an impact may occur if the noise criteria may be exceeded. Therefore, for this analysis, a *readily perceptible* 5 dBA or greater project-related noise level increase is considered a significant impact when the without project noise levels are below 60 dBA. Per the FICON, in areas where the without project noise levels

range from 60 to 65 dBA, a 3 dBA *barely perceptible* noise level increase appears to be appropriate for most people. When the without project noise levels already exceed 65 dBA, any increase in community noise louder than 1.5 dBA or greater is considered a significant impact if the noise criteria for a given land use is exceeded, since it likely contributes to an existing noise exposure exceedance. The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increase in baseline ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project (baseline) noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels of increases and their perceived acceptance at noise sensitive receiver locations are consistent with guidance provided by both the Federal Highway Administration (4 p. 9) and Caltrans (18 p. 2_48).

In addition to the FICON criteria, this analysis relies on the Caltrans *substantial* noise level increase threshold of 12 dBA to account for conditions where an existing unimproved roadway segment experiences an off-site traffic noise level increase due to a lack of existing traffic volumes. According to Caltrans, a traffic impact occurs when the future noise levels *substantially* exceed the existing noise level. In California a substantial noise increase is considered to occur when the project's predicted noise level exceeds the existing noise level by 12 dBA or more. The use of 12 dB was established in California many years ago and is based on the concept that a 10 dB increase generally is perceived as a doubling of loudness. (18 pp. 3-2)

4.1.2 NON-NOISE-SENSITIVE RECEIVERS

The County of Riverside General Plan Noise Element, Table N-1, *Land Use Compatibility for Community Noise Exposure* was used to establish the satisfactory noise levels of significance for non-noise-sensitive land uses in the Project study area. As previously shown on Exhibit 3-A, the *normally acceptable* exterior noise level for non-noise-sensitive land use is 75 dBA CNEL. Noise levels greater than 75 dBA CNEL are considered *conditionally acceptable* per the *Land Use Compatibility for Community Noise Exposure*. (11)

To determine if Project-related traffic noise level increases are significant at off-site non-noise-sensitive land uses, a *barely perceptible* 3 dBA criteria is used. When the without Project noise levels are greater than the *normally acceptable* 75 dBA CNEL land use compatibility criteria, a *barely perceptible* 3 dBA or greater noise level increase is considered a significant impact since the noise level criteria is already exceeded. The noise level increases used to determine significant impacts for non-noise-sensitive land uses is generally consistent with the FICON noise level increase thresholds for noise-sensitive land uses but instead rely on the County of Riverside General Plan Noise Element, Table N-1, *Land Use Compatibility for Community Noise Exposure normally acceptable* 75 dBA CNEL exterior noise level criteria.

4.2 VIBRATION (THRESHOLD B)

As described in Section 3.4, the vibration impacts originating from the construction of Thrifty Oil Warehouse, vibration-generating activities are appropriately evaluated using the Caltrans vibration damage thresholds to assess potential temporary construction-related impacts at adjacent building locations. The nearest noise sensitive buildings adjacent to the Project site can best be described as "older residential structures" with a maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec).

4.3 CEQA GUIDELINES NOT FURTHER ANALYZED (THRESHOLD C)

The closest airport which would require additional noise analysis under CEQA Appendix G Guideline C is the MARB/IPA. As previously indicated in Section 3.5, the noise contour boundaries of MARB/IPA presented on Exhibit 3-C of this report show that the Project's industrial land use are considered *normally acceptable* since the development area is located outside the 60 dBA CNEL contour. Therefore, the Project impacts are considered *less than significant,* and no further noise analysis is provided under CEQA Significance Criteria C.

4.4 SIGNIFICANCE CRITERIA SUMMARY

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. Table 4-1 shows the significance criteria summary matrix that includes the allowable criteria used to identify potentially significant incremental noise level increases.

TABLE 4-1: SIGNIFICANCE CRITERIA SUMMARY

Analysis	Receiving Land Use	Condition(s)	Significance Criteria	
			Daytime	Nighttime
Off-Site Traffic	Noise-Sensitive[1]	If ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
		If ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase	
		If ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
	Non-Noise-Sensitive[2]	If ambient is > 75 dBA CNEL	≥ 3 dBA CNEL Project increase	
	All	Unimproved Roadway[3]	≥ 12 dBA CNEL Project increase	
Operational	Noise-Sensitive	Exterior Noise Level Standards[4]	55 dBA L_{eq}	45 dBA L_{eq}
		If ambient is < 60 dBA Leq[1]	≥ 5 dBA L_{eq} Project increase	
		If ambient is 60 - 65 dBA Leq[1]	≥ 3 dBA L_{eq} Project increase	
		If ambient is > 65 dBA Leq[1]	≥ 1.5 dBA L_{eq} Project increase	
Construction	Noise-Sensitive	Noise Level Threshold[5]	80 dBA L_{eq}	70 dBA L_{eq}
		Vibration Level Threshold[6]	0.3 PPV (in/sec)

5 EXISTING NOISE LEVEL MEASUREMENTS

To assess the existing noise level environment, 24-hour noise level measurements were taken at three locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. Exhibit 5-A provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, long-term noise level measurements were collected by Urban Crossroads, Inc. on Wednesday, January 24, 2024. Appendix 5.1 includes study area photos.

5.1 MEASUREMENT PROCEDURE AND CRITERIA

To describe the existing noise environment, the hourly noise levels were measured during typical weekday conditions over a 24-hour period. By collecting individual hourly noise level measurements, it is possible to describe the equivalent daytime and nighttime hourly noise levels and calculate the 24-hour CNEL. The long-term noise readings were recorded using Piccolo Type 2 integrating sound level meter and dataloggers. The Piccolo sound level meters were calibrated using a Larson-Davis calibrator, Model CAL 150. All noise meters were programmed in "slow" mode to record noise levels in "A" weighted form. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (19)

5.2 NOISE MEASUREMENT LOCATIONS

The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing equivalent hourly noise levels surrounding the Project site. Both Caltrans and the FTA recognize that it is not reasonable to collect noise level measurements that can fully represent every part of a private yard, patio, deck, or balcony normally used for human activity when estimating impacts for new development projects. This is demonstrated in the Caltrans general site location guidelines which indicate that *sites must be free of noise contamination by sources other than sources of interest. Avoid sites located near sources such as barking dogs, lawnmowers, pool pumps, and air conditioners unless it is the express intent of the analyst to measure these sources*. (2) Further, FTA guidance states, t*hat it is not necessary nor recommended that existing noise exposure be determined by measuring at every noise-sensitive location in the project area. Rather, the recommended approach is to characterize the noise environment for clusters of sites based on measurements or estimates at representative locations in the community*. (8)

Based on recommendations of Caltrans and the FTA, it is not necessary to collect measurements at each individual building or residence, because each receiver measurement represents a group of buildings that share acoustical equivalence. (8) In other words, the area represented by the receiver shares similar shielding, terrain, and geometric relationship to the reference noise source. Receivers represent a location of noise sensitive areas and are used to estimate the future noise level impacts. Collecting noise level measurements at the nearby sensitive receiver

locations allows for a comparison of the before and after Project noise levels and is necessary to assess potential noise increase due to the Project's contribution to the ambient noise levels. This approach is necessary to calculate the temporary or permanent increase in *ambient* noise levels as required by the CEQA Guidelines Environmental Checklist.

5.3 NOISE MEASUREMENT RESULTS

The noise measurements presented below focus on the equivalent or the energy average hourly sound levels (L_{eq}) to describe the existing *ambient* conditions. The equivalent sound level (L_{eq}) represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. Table 5-1 identifies the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location.

TABLE 5-1: AMBIENT NOISE LEVEL MEASUREMENTS

Location[1]	Description	Energy Average Noise Level (dBA L_{eq})[2]		CNEL
		Daytime	Nighttime	
L1	Located west of the site near the residence at 20601 Tobacco Rd.	53.0	51.5	68.6
L2	Located west of the site near the residence at 23551 Placentia Av.	57.7	52.5	60.3
L3	Located south of the site near the residence at 20800 Tobacco Rd.	53.0	47.9	56.0

[1] See Exhibit 5-A for the noise level measurement locations.
[2] Energy (logarithmic) average levels. The long-term 24-hour measurement worksheets are included in Appendix 5.2.
"Daytime" = 7:00 a.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

Table 5-1 provides the equivalent noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. Appendix 5.2 provides summary worksheets of the noise levels for each hour as well as the minimum, maximum, L_1, L_2, L_5, L_8, L_{25}, L_{50}, L_{90}, L_{95}, and L_{99} percentile noise levels observed during the daytime and nighttime periods.

6 TRAFFIC NOISE METHODS AND PROCEDURES

The following section outlines the methods and procedures used to estimate and analyze the future transportation related noise environment. Consistent with County of Riverside Noise Guidelines for Land Use Planning (see Exhibit 3-A), all transportation related noise levels are presented in terms of the 24-hour CNEL's.

6.1 FHWA TRAFFIC NOISE PREDICTION MODEL

The expected roadway noise level increases from vehicular traffic were calculated by Urban Crossroads, Inc. using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. (20) The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. (21) Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period. Research conducted by Caltrans has shown that the use of soft site conditions is appropriate for the application of the FHWA traffic noise prediction model used in this analysis. (22)

6.1.1 OFF-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS

Table 6-1 presents the roadway parameters used to assess the Project's off-site transportation noise impacts. Table 6-1 identifies the three off-site study area roadway segments, the distance from the centerline to adjacent land use based on the functional roadway classifications per the County of Riverside General Plan Circulation Element, and the vehicle speeds. The ADT volumes used in this study area presented on Table 6-2 are based on the *Thrifty Oil Warehouse Focused Traffic Assessment*, prepared by Urban Crossroads, Inc. for the following traffic scenarios (22).

- Existing (E)
- Existing plus Project (E+P)

The ADT volumes vary for each roadway segment based on the existing traffic volumes and the combination of project traffic distributions. This analysis relies on a comparative evaluation of the off-site traffic noise impacts at the boundary of the right-of-way of the receiving adjacent land use, without and with project ADT traffic volumes from the Project traffic analysis. The Project is anticipated to generate a net total of 322 two-way trips per day (actual vehicles) that includes 114 truck trips.

TABLE 6-1: OFF-SITE ROADWAY PARAMETERS

ID	Roadway	Segment	Classification[1]	Receiving Land Use[2]	Distance from Centerline to Receiving Land Use (Feet)[3]	Vehicle Speed (mph)
1	Tobacco Rd.	s/o Placentia Av.	Collector	Sensitive	37'	40
2	Placentia Av.	w/o Tobacco Rd.	Secondary	Sensitive	50'	40
3	Placentia Av.	e/o Tobacco Rd.	Secondary	Sensitive	50'	40

[2] Based on a review of existing aerial imagery.
[3] Distance to receiving land use is based upon the right-of-way distances.

TABLE 6-2: AVERAGE DAILY TRAFFIC VOLUMES

ID	Roadway	Segment	Average Daily Traffic Volumes[1]					
			Existing (2023)		EAC (2026)		HY (2045)	
			Without Project	With Project	Without Project	With Project	Without Project	With Project
1	Tobacco Rd.	s/o Placentia Av.	91	335	21	265	41	285
2	Placentia Av.	w/o Tobacco Rd.	762	866	22	126	42	146
3	Placentia Av.	e/o Tobacco Rd.	991	1,131	23	163	43	183

[1] Thrifty Oil Warehouse Focused Traffic Assessment, Urban Crossroads, Inc.

To quantify the off-site noise levels, the Project related truck trips were added to the heavy truck category in the FHWA noise prediction model. The addition of the Project related truck trips increases the percentage of heavy trucks in the vehicle mix. This approach recognizes that the FHWA noise prediction model is significantly influenced by the number of heavy trucks in the vehicle mix. Table 6-3 provides the time of day (daytime, evening, and nighttime) vehicle splits. The daily Project truck trip-ends were assigned to the individual off-site study area roadway segments based on the Project truck trip distribution percentages documented in the *Thrifty Oil Warehouse Focused Traffic Assessment*. Using the Project truck trips in combination with the Project trip distribution, Urban Crossroads, Inc. calculated the number of additional Project truck trips and vehicle mix percentages for each of the study area roadway segments. Table 6-4 shows the traffic flow by vehicle type (vehicle mix) used for all without Project traffic scenarios, and Table 6-5 shows the vehicle mixes used for the with Project traffic scenarios.

TABLE 6-3: TIME OF DAY VEHICLE SPLITS

Vehicle Type	Time of Day Splits[1]			Total of Time of Day Splits
	Daytime	Evening	Nighttime	
Autos	75.50%	14.00%	10.50%	100.00%
Medium Trucks	48.00%	2.00%	50.00%	100.00%
Heavy Trucks	48.00%	2.00%	50.00%	100.00%

[1] County of Riverside Office of Industrial Hygiene. Values rounded to the nearest one-hundredth. Vehicle mix percentage values rounded to the nearest one-hundredth. "Daytime" = 7:00 a.m. to 7:00 p.m.; "Evening" = 7:00 p.m. to 10:00 p.m.; "Nighttime" = 10:00 p.m. to 7:00 a.m.

TABLE 6-4: WITHOUT PROJECT VEHICLE MIX

Classification	Total % Traffic Flow[1]			Total
	Autos	Medium Trucks	Heavy Trucks	
All Segments	92.00%	3.00%	5.00%	100.00%

[1] County of Riverside Office of Industrial Hygiene. Values rounded to the nearest one-hundredth. Vehicle mix percentage values rounded to the nearest one-hundredth.

Due to the added Project truck trips, the increase in Project traffic volumes and the distributions of trucks on the study area road segments, the percentage of autos, medium trucks and heavy trucks will vary for each of the traffic scenarios. This explains why the existing and future traffic volumes and vehicle mixes vary between seemingly identical study area roadway segments.

TABLE 6-5: EXISTING WITH PROJECT VEHICLE MIX

ID	Roadway	Segment	With Project[1]			
			Autos	Medium Trucks	Heavy Trucks	Total[2]
1	Tobacco Rd.	s/o Placentia Av.	80.82%	3.80%	15.38%	100.00%
2	Placentia Av.	w/o Tobacco Rd.	92.96%	2.64%	4.40%	100.00%
3	Placentia Av.	e/o Tobacco Rd.	87.95%	3.51%	8.54%	100.00%

[1] Total of vehicle mix percentage values rounded to the nearest one-hundredth.

7 OFF-SITE TRAFFIC NOISE ANALYSIS

To assess the off-site transportation CNEL noise level impacts associated with development of the proposed Project, noise contours were developed based on *the Thrifty Oil Warehouse Focused Traffic Assessment* prepared by Urban Crossroads, Inc. (22) Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway.

7.1 TRAFFIC NOISE CONTOURS

Noise contours were used to assess the Project's incremental 24-hour dBA CNEL traffic-related noise impacts at receiving land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA CNEL noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area. Tables 7-1 through 7-6 present a summary of the exterior traffic noise levels without barrier attenuation for each traffic condition. Appendix 7.1 includes the traffic noise level contours worksheets for each traffic condition.

TABLE 7-1: EXISTING WITHOUT PROJECT CONTOURS

ID	Road	Segment	Receiving Land Use[1]	CNEL at Receiving Land Use (dBA)[2]	Distance to Contour from Centerline (Feet)		
					70 dBA CNEL	65 dBA CNEL	60 dBA CNEL
1	Tobacco Rd.	s/o Placentia Av.	Sensitive	53.9	56	122	262
2	Placentia Av.	w/o Tobacco Rd.	Sensitive	61.5	RW	111	240
3	Placentia Av.	e/o Tobacco Rd.	Sensitive	62.7	RW	75	161

[1] Based on a review of existing aerial imagery.
[2] The CNEL is calculated at the boundary of the right-of-way of the receiving adjacent land use.
"RW" = Location of the respective noise contour falls within the right-of-way of the road.

TABLE 7-2: EXISTING WITH PROJECT CONTOURS

ID	Road	Segment	Receiving Land Use[1]	CNEL at Receiving Land Use (dBA)[2]	Distance to Contour from Centerline (Feet)		
					70 dBA CNEL	65 dBA CNEL	60 dBA CNEL
1	Tobacco Rd.	s/o Placentia Av.	Sensitive	63.6	RW	RW	65
2	Placentia Av.	w/o Tobacco Rd.	Sensitive	61.6	RW	RW	64
3	Placentia Av.	e/o Tobacco Rd.	Sensitive	65.1	RW	51	110

[1] Based on a review of existing aerial imagery.
[2] The CNEL is calculated at the boundary of the right-of-way of the receiving adjacent land use.
"RW" = Location of the respective noise contour falls within the right-of-way of the road.

7.2 EXISTING PROJECT TRAFFIC NOISE LEVEL INCREASES

An analysis of existing traffic noise levels plus traffic noise generated by the proposed Project has been included in this report for informational purposes and to fully analyze all the existing traffic scenarios identified in the Traffic Analysis prepared by Urban Crossroads, Inc. However, the analysis of existing off-site traffic noise levels plus traffic noise generated by the proposed Project scenario will not actually occur since the Project would not be fully constructed and operational until Year 2026 conditions. Table 7-1 shows the Existing without Project conditions CNEL noise levels. The Existing without Project exterior noise levels range from 53.9 to 62.7 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7-2 shows the Existing with Project conditions ranging from 61.6 to 65.1 dBA CNEL. Table 7-3 shows that the Project off-site traffic noise level increases range from 0.1 to 9.7 dBA CNEL on the study area roadway segments.

7.3 PROJECT OFF-SITE TRAFFIC NOISE IMPACTS

The off-site traffic noise analysis recognizes that the Project would generate a noise level increase of up to 9.7 dBA CNEL on the existing and unimproved Tobacco Road. This noise level increase affects two existing residences located at 23551, 20601 Tobacco Road and is largely due to the lack of existing traffic volume on the unimproved roadway segment. The existing traffic noise levels on this segment are calculated at 53.9 dBA CNEL. The addition of near-term Project traffic is expected to increase the off-site traffic noise levels to 63.6 dBA CNEL resulting in a project incremental traffic noise level increase of 9.7 dBA CNEL. According to Caltrans, a traffic impact occurs when the future noise level substantially exceeds the existing noise level. In California a substantial noise increase is considered to occur when the project's predicted noise level exceeds the existing noise level by 12 dBA or more. The use of 12 dB was established in California many years ago and is based on the concept that a 10 dB increase generally is perceived as a doubling of loudness. (23 pp. 3-2)

While the relative incremental increase due to the off-site Project traffic noise on Tobacco Road may be considered a doubling of the existing traffic noise levels, it does not exceed the Caltrans 12 dB substantial noise level increase threshold or the County of Riverside General Plan Noise Element Policy N 1.3 exterior noise level criteria of 65 dBA CNEL for noise sensitive residential land uses. (10) Further, the thresholds of significance do not specifically identify what portion of the residential land use that is considered "noise sensitive." Noise-sensitive land use is generally limited to private outdoor living areas since it is unlikely that humans will be frequently occupying the front yard areas abutting the right-of-way boundary of Tobacco Road. This assumption is supported based upon analyses undertaken by other agencies. According to FHWA guidance, outdoor living areas are generally limited to outdoor living areas of frequent human use (e.g., private backyards of single-family homes). Therefore, front and side yards of residences adjacent to off-site roadway segments do not represent noise sensitive areas of frequent human use that require exterior noise mitigation.

TABLE 7-3: EXISTING WITH PROJECT TRAFFIC NOISE LEVEL INCREASES

ID	Road	Segment	Receiving Land Use[1]	CNEL at Receiving Land Use (dBA)[2]			Incremental Noise Level Increase Threshold[3]	
				Without Project	With Project	Project Addition	Limit	Exceeded?
1	Tobacco Rd.	s/o Placentia Av.	Sensitive	53.9	63.6	9.7	12.0	No
2	Placentia Av.	w/o Tobacco Rd.	Sensitive	61.5	61.6	0.1	3.0	No
3	Placentia Av.	e/o Tobacco Rd.	Sensitive	62.7	65.1	2.4	3.0	No

[1] Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.
[2] The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.
[3] Does the Project create an incremental noise level increase exceeding the significance criteria (Table 4-1)?

In addition, the ambient noise level measurements presented on Table 5-1 show that the existing residences adjacent to Tobacco Road already experience exterior noise levels ranging from 60.3 to 68.6 dBA CNEL. Since the existing ambient noise levels far exceed the calculated existing without Project traffic noise levels, likely due to background traffic noise from the I-215 Freeway and aircraft noise from the MARB/IPA, it expected that the noise sensitive land uses adjacent to the Tobacco Road will not perceive a significant off-site incremental traffic noise level increase due to the Project traffic. Therefore, this analysis demonstrates that the land uses adjacent to the study area roadway segments would experience *less than significant* noise level increases on receiving land uses due to the Project traffic.

8 RECEIVER LOCATIONS

To assess the potential for long-term operational and short-term construction noise impacts, the following sensitive receiver locations, as shown on Exhibit 8-A, were identified as representative locations for analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include multi-family dwellings, hotels, motels, dormitories, out-patient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

To describe the potential off-site Project noise levels, three receiver locations in the vicinity of the Project site were identified. Other sensitive land uses in the Project study area that are located at greater distances than those identified in this noise study will experience lower noise levels than those presented in this report due to the additional attenuation from distance and the shielding of intervening structures. Distance is measured in a straight line from the project boundary to each receiver location.

R1: Location R1 represents the existing residence at 20601 Tobacco Road, approximately 188 feet west of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R1 is placed at the building façade. A 24-hour noise measurement was taken near this location, L1, to describe the existing ambient noise environment.

R2: Location R2 represents the existing residence at 23551 Placentia Avenue, approximately 115 feet west of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receptor R2 is placed at the building façade. A 24-hour noise measurement was taken near this location, L2, to describe the existing ambient noise environment.

R3: Location R3 represents the existing residence at 20800 Tobacco Road, approximately 1,011 feet south of the Project site. Since there are no private outdoor living areas (backyards) facing the Project site, receiver R3 is placed at the building façade. A 24-hour noise measurement was taken near this location, L3, to describe the existing ambient noise environment.

EXHIBIT 8-A: RECEIVER LOCATIONS

9 OPERATIONAL NOISE IMPACTS

This section analyzes the potential stationary-source operational noise impacts at the nearest receiver locations, identified in Section 8, resulting from the operation of the proposed Thrifty Oil Warehouse Project. Exhibit 9-A of the Noise Study includes over 27 individual noise sources to fully describe the potential reasonable worst-case noise environment.

9.1 OPERATIONAL NOISE SOURCES

This operational noise analysis is intended to describe noise level impacts associated with the expected typical of daytime and nighttime activities at the Project site. Consistent with similar warehouse uses, the Project business operations would primarily be conducted within the enclosed building, except for traffic movement, parking, as well as loading and unloading of trucks at designated loading bays. The on-site Project-related noise sources are expected to include: loading dock activity, roof-top air conditioning units, parking lot vehicle activities, trash enclosure activity, and truck movements.

9.2 REFERENCE NOISE LEVELS

To estimate the Project operational noise impacts, reference noise level measurements were collected from similar types of activities to represent the noise levels expected with the development of the proposed Project. This section provides a detailed description of the reference noise level measurements shown on Table 9-1 used to estimate the Project operational noise impacts. It is important to note that the following projected noise levels assume the reasonable worst-case noise environment with the typical noise sources operating at the same time. These sources of noise activity will likely vary throughout the day.

9.2.1 MEASUREMENT PROCEDURES

The reference noise level measurements presented in this section were collected using a Larson Davis LxT Type 1 precision sound level meter (serial number 01146). The LxT sound level meter was calibrated using a Larson-Davis calibrator, Model CAL 200, was programmed in "slow" mode to record noise levels in "A" weighted form and was located at approximately five feet above the ground elevation for each measurement. The sound level meters and microphones were equipped with a windscreen during all measurements. All noise level measurement equipment satisfies the American National Standards Institute (ANSI) standard specifications for sound level meters ANSI S1.4-2014/IEC 61672-1:2013. (19)

EXHIBIT 9-A: OPERATIONAL NOISE SOURCE LOCATIONS

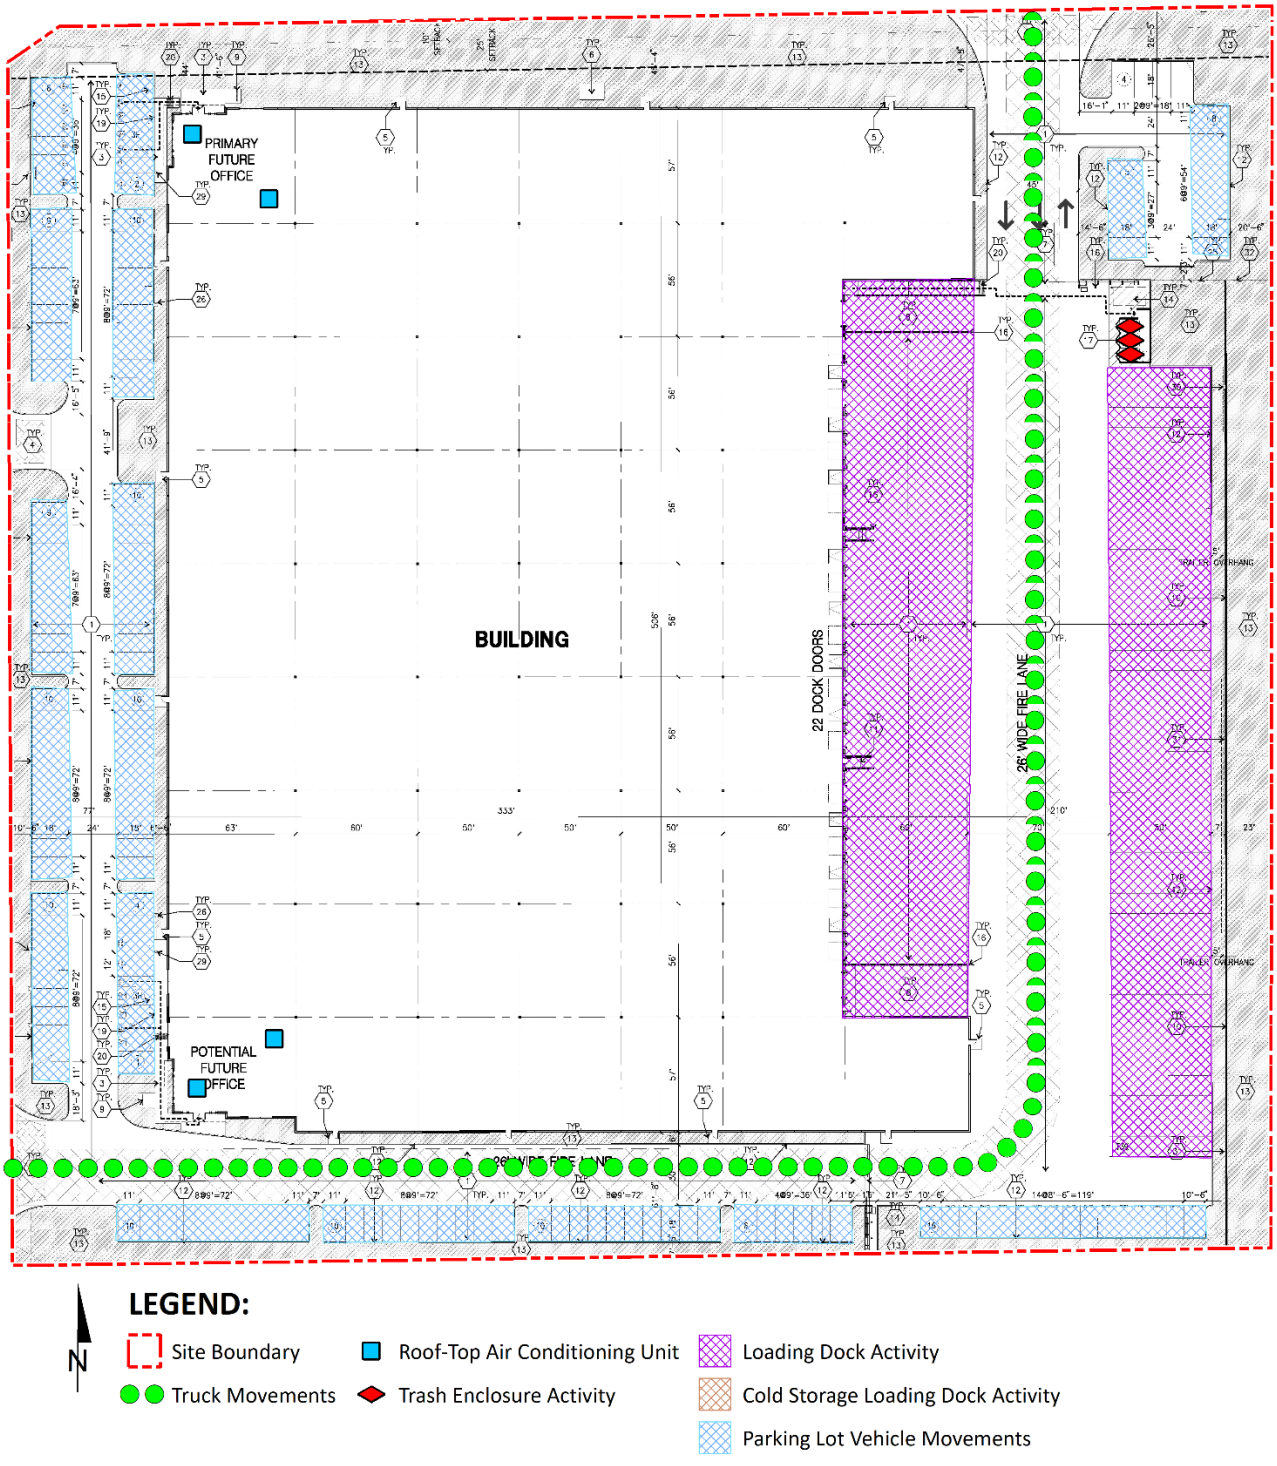

TABLE 9-1: REFERENCE NOISE LEVEL MEASUREMENTS

Reference Noise Source	Noise Source Height (Feet)	Min./ Hour[1]		Reference Noise Level (dBA L_{eq}) @ 50 Feet	Sound Power Level (dBA)[2]
		Day	Night		
Loading Dock Activity	8'	60	60	62.8	103.4
Parking Lot Vehicle Movements	5'	60	60	52.6	81.1
Roof-Top Air Conditioning Units	5'	39	28	57.2	88.9
Trash Enclosure Activity	5'	60	30	57.3	89.0
Truck Movements	8'	60	60	59.8	93.2

[1] Anticipated duration (minutes within the hour) of noise activity during typical hourly conditions expected at the Project site. "Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.

[2] Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings. Sound power levels calculated using the CadnaA noise model at the reference distance to the noise source. Numbers may vary due to size differences between point and area noise sources.

9.2.2 LOADING DOCK ACTIVITY

The reference dry goods loading dock activities are intended to describe the typical operational noise source levels associated with the Project. This includes truck idling, deliveries, backup alarms, unloading/loading, docking including a combination of tractor trailer semi-trucks, two-axle delivery trucks, and background forklift operations. At a uniform reference distance of 50 feet, Urban Crossroads collected a reference noise level of 62.8 dBA L_{eq}. The loading dock activity noise level measurement was taken over a fifteen-minute period and represents multiple noise sources taken from the center of activity. The reference noise level measurement includes employees unloading a docked truck container included the squeaking of the truck's shocks when weight was removed from the truck, employees playing music over a radio, as well as a forklift horn and backup alarm. In addition, during the noise level measurement a truck entered the loading dock area and proceeded to reverse and dock in a nearby loading bay, adding truck engine, idling, air brakes noise, in addition to on-going idling of an already docked truck. Loading dock activity is estimated during all the daytime, evening, and nighttime hours.

9.2.3 ROOF-TOP AIR CONDITIONING UNITS

The noise level measurements describe a single mechanical roof-top air conditioning unit. The reference noise level represents a Lennox SCA120 series 10-ton model packaged air conditioning unit. At the uniform reference distance of 50 feet, the reference noise level is 57.2 dBA L_{eq}. Based on the typical operating conditions observed over a four-day measurement period, the roof-top air conditioning units are estimated to operate for and average 39 minutes per hour during the daytime hours, and 28 minutes per hour during the nighttime hours. These operating conditions reflect peak summer cooling requirements with measured temperatures approaching 96 degrees Fahrenheit (°F) with average daytime temperatures of 82°F. For this noise analysis, the air conditioning units are expected to be located on the roof of the Project buildings.

9.2.4 PARKING LOT VEHICLE MOVEMENTS

To describe the on-site parking lot activity, a long-term reference noise level measurement was collected in the center of activity within the staff parking lot of a warehouse distribution center. At 50 feet from the center of activity, the parking lot produced a reference noise level of 52.6 dBA L_{eq}. Parking activities are expected to take place during the full hour (60 minutes) throughout the daytime and evening hours. The parking lot noise levels are mainly due to cars pulling in and out of parking spaces in combination with car doors opening and closing.

9.2.5 TRASH ENCLOSURE ACTIVITY

To describe the noise levels associated with a trash enclosure activity, Urban Crossroads collected a reference noise level measurement at an existing trash enclosure containing two dumpster bins. The trash enclosure noise levels describe metal gates opening and closing, metal scraping against concrete floor sounds, dumpster movement on metal wheels, and trash dropping into the metal dumpster. The reference noise levels describe trash enclosure noise activities when trash is dropped into an empty metal dumpster, as would occur at the Project Site. The measured reference noise level at the uniform 50-foot reference distance is 57.3 dBA L_{eq} for the trash enclosure activity. The reference noise level describes the expected noise source activities associated with the trash enclosures for the Project's proposed building.

9.2.6 TRUCK MOVEMENTS

The truck movements reference noise level measurement was collected over a period of 1 hour and 28 minutes and represent multiple heavy trucks entering and exiting the outdoor loading dock area producing a reference noise level of 59.8 dBA L_{eq} at 50 feet. The noise sources included at this measurement location account for trucks entering and existing the Project driveways and maneuvering in and out of the outdoor loading dock activity area.

9.3 CADNAA NOISE PREDICTION MODEL

To fully describe the exterior operational noise levels from the Project, Urban Crossroads, Inc. developed a noise prediction model using the CadnaA (Computer Aided Noise Abatement) computer program. CadnaA can analyze multiple types of noise sources using the spatially accurate Project site plan, georeferenced Nearmap aerial imagery, topography, buildings, and barriers in its calculations to predict outdoor noise levels. Using the ISO 9613-2 protocol, CadnaA will calculate the distance from each noise source to the noise receiver locations, using the ground absorption, distance, and barrier/building attenuation inputs to provide a summary of noise level at each receiver and the partial noise level contributions by noise source. Consistent with the ISO 9613-2 protocol, the CadnaA noise prediction model relies on the reference sound power level (L_w) to describe individual noise sources.

While sound pressure levels (e.g., L_{eq}) quantify in decibels the intensity of given sound sources at a reference distance, sound power levels (L_w) are connected to the sound source and are independent of distance. Sound pressure levels vary substantially with distance from the source and diminish because of intervening obstacles and barriers, air absorption, wind, and other factors. Sound power is the acoustical energy emitted by the sound source and is an absolute

value that is not affected by the environment. The operational noise level calculations provided in this noise study account for the distance attenuation provided due to geometric spreading, when sound from a localized stationary source (i.e., a point source) propagates uniformly outward in a spherical pattern. A default ground attenuation factor of 0.5 was used in the CadnaA noise analysis to account for mixed ground representing a combination of hard and soft surfaces. Appendix 9.1 includes the detailed noise model inputs including the planned screenwall used to estimate the Project operational noise levels presented in this section.

9.4 PROJECT OPERATIONAL NOISE LEVELS

Using the reference noise levels to represent the proposed Project operations that include loading dock activity, roof-top air conditioning units, parking lot vehicle activities, trash enclosure activity, and truck movements, Urban Crossroads, Inc. calculated the unmitigated operational source noise levels that are expected to be generated at the Project site and the Project-related noise level increases that would be experienced at each of the sensitive receiver locations. Table 9-2 shows the Project operational noise levels during the daytime hours of 7:00 a.m. to 10:00 p.m. The daytime hourly noise levels at the off-site receiver locations are expected to range from 39.4 to 45.0 dBA L_{eq}.

TABLE 9-2: DAYTIME PROJECT OPERATIONAL NOISE LEVELS

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA Leq)		
	R1	R2	R3
Loading Dock Activity	27.5	27.6	38.3
Parking Lot Vehicle Movements	39.0	41.8	27.6
Roof-Top Air Conditioning Units	39.7	41.8	28.3
Trash Enclosure Activity	14.2	15.0	19.2
Truck Movements	36.3	26.6	28.4
Total (All Noise Sources)	**43.4**	**45.0**	**39.4**

[1] See Exhibit 9-A for the noise source locations. CadnaA noise model calculations are included in Appendix 9.1.

Table 9-3 shows the Project operational noise levels during the nighttime hours of 10:00 p.m. to 7:00 a.m. The nighttime hourly noise levels at the off-site receiver locations are expected to range from 39.3 to 44.0 dBA L_{eq}. The differences between the daytime and nighttime noise levels are largely related to the estimated duration of noise activity as outlined in Table 9-1 and Appendix 9.1.

TABLE 9-3: NIGHTTIME PROJECT OPERATIONAL NOISE LEVELS

Noise Source[1]	Operational Noise Levels by Receiver Location (dBA Leq)		
	R1	R2	R3
Loading Dock Activity	27.5	27.6	38.3
Parking Lot Vehicle Movements	39.0	41.8	27.6
Roof-Top Air Conditioning Units	37.3	39.4	25.9
Trash Enclosure Activity	10.2	11.0	15.2

9.5 PROJECT OPERATIONAL NOISE LEVEL COMPLIANCE

To demonstrate compliance with local noise regulations, the mitigated Project-only operational noise levels are evaluated against exterior noise level thresholds based on the County of Riverside exterior noise level standards at the existing nearby noise-sensitive receiver locations. Table 9-4 shows that the mitigated operational noise levels associated with Project will not exceed the County of Riverside daytime and nighttime exterior noise level standards at the existing nearby noise-sensitive receiver locations. Therefore, the mitigated operational noise impacts are considered *less than significant* at the nearby noise-sensitive receiver locations.

TABLE 9-4: OPERATIONAL NOISE LEVEL COMPLIANCE

Receiver Location[1]	Project Operational Noise Levels (dBA Leq)[2]		Noise Level Standards (dBA Leq)[3]		Noise Level Standards Exceeded?[4]	
	Daytime	Nighttime	Daytime	Nighttime	Daytime	Nighttime
R1	43.4	42.6	55	45	No	No
R2	45.0	44.0	55	45	No	No
R3	39.4	39.3	55	45	No	No

[1] See Exhibit 8-A for the receiver locations.
[2] Proposed Project unmitigated operational noise levels as shown on Tables 9-2 and 9-3.
[3] Exterior noise level standards, as shown on Table 4-1.
[4] Do the estimated Project operational noise source activities exceed the noise level standards?
"Daytime" = 7:00 a.m. - 10:00 p.m.; "Nighttime" = 10:00 p.m. - 7:00 a.m.

9.6 PROJECT OPERATIONAL NOISE LEVEL INCREASES

To describe the Project operational noise level increases, the Project operational noise levels are combined with the existing ambient noise levels measurements for the nearby receiver locations that may be potentially impacted by Project operational noise sources. Since the units used to measure noise, decibels (dB), are logarithmic units, the Project-operational and existing ambient noise levels cannot be combined using standard arithmetic equations. (2) Instead, they must be logarithmically added using the following base equation:

$$SPL_{Total} = 10\log_{10}[10^{SPL1/10} + 10^{SPL2/10} + \ldots 10^{SPLn/10}]$$

Where "SPL1," "SPL2," etc. are equal to the sound pressure levels being combined, or in this case, the Project-operational and existing ambient noise levels. The difference between the combined Project and ambient noise levels describes the Project noise level increases to the existing ambient noise environment. Noise levels that would be experienced at receiver locations when Project-source noise is added to the daytime and nighttime ambient conditions are presented on Tables 9-5 and 9-6, respectively. As indicated on Table 9-5, the Project will generate a daytime operational noise level increase ranging from 0.2 to 0.5 dBA L_{eq} at the nearest receiver locations. Table 9-6 shows that the Project will generate a nighttime operational noise level increase ranging from 0.5 to 0.6 dBA L_{eq} at the nearest receiver locations. Project-related operational noise level increases will not exceed the operational noise level increase significance criteria presented in Table 4-1. Therefore, Project related operational noise level increases at the sensitive receiver locations will be *less than significant.*

TABLE 9-5: DAYTIME PROJECT OPERATIONAL NOISE LEVEL INCREASES

Receiver Location[1]	Total Project Operational Noise Level[2]	Measurement Location[3]	Reference Ambient Noise Levels[4]	Combined Project and Ambient[5]	Project Increase[6]	Increase Criteria[7]	Increase Criteria Exceeded?

10 CONSTRUCTION IMPACTS

This section analyzes potential impacts resulting from the short-term construction activities associated with the development of the Project. Exhibit 10-A shows the on-site construction noise source activity including the off-site roadway and utility improvements in relation to the nearest sensitive receiver locations previously described in Section 8. According to Riverside County Ordinance No. 847 Regulating Noise Section 2i (Code Section 9.52.020[I]), noise associated with any private construction activity located within one-quarter of a mile from an inhabited dwelling is considered exempt between the hours of 6:00 a.m. and 6:00 p.m., during the months of June through September, and 7:00 a.m. and 6:00 p.m., during the months of October through May. (12)

10.1 CONSTRUCTION NOISE LEVELS

The FTA *Transit Noise and Vibration Impact Assessment Manual* recognizes that construction projects are accomplished in several different stages and outlines the procedures for assessing noise impacts during construction. Each stage has a specific equipment mix, depending on the work to be completed during that stage. As a result of the equipment mix, each stage has its own noise characteristics; some stages have higher continuous noise levels than others, and some have higher impact noise levels than others. The Project construction activities are expected to occur in the following stages:

- Site Preparation
- Grading
- Building Construction
- Paving
- Architectural Coating

10.2 CONSTRUCTION REFERENCE NOISE LEVELS

To describe construction noise activities, this construction noise analysis was prepared using reference construction equipment noise levels from the Federal Highway Administration (FHWA) published the Roadway Construction Noise Model (RCNM), which includes a national database of construction equipment reference noise emission levels. (24) The RCNM equipment database, provides a comprehensive list of the noise generating characteristics for specific types of construction equipment. In addition, the database provides an acoustical usage factor to estimate the fraction of time each piece of construction equipment is operating at full power (i.e., its loudest condition) during a construction operation.

EXHIBIT 10-A: CONSTRUCTION NOISE SOURCE LOCATIONS

10.3 ON-SITE CONSTRUCTION NOISE ANALYSIS

Using the reference construction equipment noise levels and the CadnaA noise prediction model, calculations of the Project construction noise level impacts at the nearby sensitive receiver locations were completed. Consistent with FTA guidance for detailed construction noise assessment, Table 10-1 presents the combined noise levels for the loudest construction equipment, assuming all equipment operates at the same time. To account for the dynamic nature of construction activities, the CadnaA construction noise analysis evaluates the equipment as multiple moving point sources within the construction area (Project site boundary). Construction impacts are based on the highest noise level calculated at each receiver location. As shown on Table 10-2, the construction noise levels are expected to range from 50.6 to 77.2 dBA L_{eq} at the nearby receiver locations. Appendix 10.1 includes the detailed CadnaA construction noise model inputs.

TABLE 10-1: CONSTRUCTION REFERENCE NOISE LEVELS

Construction Stage	Reference Construction Equipmnet[1]	Reference Noise Level @ 50 Feet (dBA L_{eq})	Composite Reference Noise Level (dBA L_{eq})[2]	Reference Power Level (dBA L_w)[3]
Site Preparation	Tractor	80	84.0	115.6
	Backhoe	74		
	Grader	81		
Grading	Scraper	80	83.3	114.9
	Excavator	77		
	Dozer	78		
Building Construction	Crane	73	80.6	112.2
	Generator	78		
	Front End Loader	75		
Paving	Paver	74	77.8	109.5
	Dump Truck	72		
	Roller	73		
Architectural Coating	Man Lift	68	76.2	107.8
	Compressor (air)	74		
	Generator (<25kVA)	70		

[1] FHWA Road Construction Noise Model.
[2] Represents the combined noise level for all equipment assuming they operate at the same time consistent with FTA Transit Noise and Vibration Impact Assessment guidance.
[3] Sound power level represents the total amount of acoustical energy (noise level) produced by a sound source independent of distance or surroundings.

TABLE 10-2: ON-SITE CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})					
	Site Preparation	Grading	Building Construction	Paving	Architectural Coating	Highest Levels[2]
R1	67.3	66.6	63.9	61.2	59.5	70.1
R2	68.9	68.2	65.5	62.8	61.1	71.7
R3	58.4	57.7	55.0	52.3	50.6	61.2

[1] Construction noise source and receiver locations are shown on Exhibit 10-A.
[2] Construction noise level calculations based on distance from the construction activity, which is measured from the Project site boundary to the nearest receiver locations. CadnaA construction noise model inputs are included in Appendix 10.1.

10.4 PROJECT SITE CONSTRUCTION NOISE LEVEL COMPLIANCE

To evaluate whether the Project will generate potentially significant short-term noise levels at nearest receiver locations, a construction-related daytime noise level threshold of 80 dBA L_{eq} is used as a reasonable threshold to assess the daytime construction noise level impacts. The construction noise analysis shows that the nearest receiver locations will satisfy the reasonable daytime 80 dBA L_{eq} significance threshold during Project construction activities as shown on Table 10-3. Therefore, the noise impacts due to Project construction noise are considered *less than significant* at all receiver locations.

TABLE 10-3: PROJECT SITE CONSTRUCTION NOISE LEVEL COMPLIANCE

Receiver Location[1]	Construction Noise Levels (dBA L_{eq})		
	Highest Construction Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	70.1	80	No
R2	71.7	80	No
R3	61.2	80	No

[1] Construction noise source and receiver locations are shown on Exhibit 10-A.
[2] Highest construction noise level calculations based on distance from the construction noise source activity to the nearest receiver locations as shown on Table 10-2.
[3] Construction noise level thresholds as shown on Table 4-1.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

10.5 NIGHTTIME CONCRETE POUR NOISE ANALYSIS

It is our understanding that nighttime concrete pouring activities will occur as a part of Project building construction activities. Nighttime concrete pouring activities are often used to support reduced concrete mixer truck transit times and lower air temperatures than during the daytime hours and are generally limited to the actual building pad area. Since the nighttime concrete pours will take place outside the permitted by Riverside County Ordinance No. 847 Regulating Noise Section 2i (Code Section 9.52.020[I]), the Project Applicant will be required to obtain authorization for nighttime work from the County of Riverside. Any nighttime construction noise activities are evaluated against the FTA nighttime exterior construction noise level threshold of 70 dBA L_{eq} for noise sensitive residential land use. (8 p. 179)

10.5.1 NIGHTTIME CONCRETE POUR REFERENCE NOISE LEVEL MEASUREMENTS

To estimate the noise levels due to nighttime concrete pouring activities, sample reference noise level measurements were taken during a nighttime concrete pouring at a construction site. Urban Crossroads, Inc. collected short-term nighttime concrete pour reference noise level measurements during the noise-sensitive nighttime hours between 1:00 a.m. to 2:00 a.m. at 27334 San Bernardino Avenue in the City of Redlands. The reference noise levels describe the expected concrete pour noise sources that may include concrete mixer truck movements and pouring activities, concrete paving equipment, rear mounted concrete mixer truck backup alarms, engine idling, air brakes, generators, and workers communicating/whistling. To describe the nighttime concrete pour noise levels associated with the construction of the Thrifty Oil Warehouse, this analysis relies on reference sound pressure level of 67.7 dBA L_{eq} at 50 feet representing a sound power level of 100.3 dBA L_w. While the Project noise levels will depend on the actual duration of activities and specific equipment fleet in use at the time of construction, the reference sound power level of 100.3 dBA L_w is used to describe the expected Project nighttime concrete pour noise activities.

10.5.2 NIGHTTIME CONCRETE POUR NOISE LEVEL COMPLIANCE

As shown on Table 10-4, the noise levels associated with the nighttime concrete pour activities are estimated to range from 43.1 to 53.6 dBA L_{eq} at the existing noise sensitive receiver locations. The analysis shows that the unmitigated nighttime concrete pour activities will not exceed the FTA 70 dBA L_{eq} nighttime residential noise level threshold at all the nearest noise sensitive receiver locations. Therefore, the noise impacts due to Project construction nighttime concrete pour noise activity are considered *less than significant* at all receiver locations with prior authorization for nighttime work from the County of Riverside. Appendix 10.3 includes the CadnaA nighttime concrete pour noise model inputs.

TABLE 10-4: NIGHTTIME CONCRETE POUR NOISE LEVEL COMPLIANCE

Receiver Location[1]	Concrete Pour Construction Noise Levels (dBA L_{eq})		
	Exterior Noise Levels[2]	Threshold[3]	Threshold Exceeded?[4]
R1	52.0	70	No
R2	53.6	70	No
R3	43.1	70	No

[1] Construction noise source and receiver locations are shown on Exhibit 10-A.
[2] Nighttime Concrete Pour noise model inputs are included in Appendix 10.2.
[3] Construction noise level thresholds as shown on Table 4-1.
[4] Do the estimated Project construction noise levels exceed the construction noise level threshold?

10.6 CONSTRUCTION VIBRATION ANALYSIS

Construction activity can result in varying degrees of ground vibration, depending on the equipment and methods employed. The operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Ground

vibration levels associated with various types of construction equipment are summarized on Table 10-5. Based on the representative vibration levels presented for various construction equipment types, it is possible to estimate the potential Project construction vibration levels using the following vibration assessment methods defined by the FTA. To calculate the vibration levles, the FTA provides the following equation: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$

TABLE 10-5: VIBRATION SOURCE LEVELS FOR CONSTRUCTION EQUIPMENT

Equipment	PPV (in/sec) at 25 feet
Small bulldozer	0.003
Jackhammer	0.035
Loaded Trucks	0.076
Large bulldozer	0.089
Vibratory Roller	0.210

Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual

Table 10-6 presents the expected Project related vibration levels at the nearby receiver locations. At distances ranging from 115 to 1,011 feet from Project construction activities, construction vibration velocity levels are estimated to range from 0.001 to 0.021 in/sec PPV. Based on maximum acceptable continuous vibration threshold of 0.3 PPV (in/sec), the typical Project construction vibration levels will fall below the building damage thresholds at all the noise sensitive receiver locations. Therefore, the Project-related vibration impacts are considered *less than significant* during typical construction activities at the Project site.

TABLE 10-6: PROJECT CONSTRUCTION VIBRATION LEVELS

Location[1]	Distance to Const. Activity (Feet)[2]	Typical Construction Vibration Levels PPV (in/sec)[3]						Thresholds PPV (in/sec)[4]	Thresholds Exceeded?[5]
		Small bulldozer	Jack-hammer	Loaded Trucks	Large bulldozer	Vibratory Roller	Highest Vibration Level		
R1	115'	0.000	0.004	0.008	0.009	0.021	0.021	0.3	No
R2	188'	0.000	0.002	0.004	0.004	0.010	0.010	0.3	No
R3	1,011'	0.000	0.000	0.000	0.000	0.001	0.001	0.3	No

APPENDIX 3.1:

COUNTY OF RIVERSIDE MUNICIPAL CODE

This page intentionally left blank

Chapter 9.52 NOISE REGULATION

Sections:

9.52.010 Intent.

At certain levels, sound becomes noise and may jeopardize the health, safety or general welfare of Riverside County residents and degrade their quality of life. Pursuant to its police power, the board of supervisors declares that noise shall be regulated in the manner described in this chapter. This chapter is intended to establish county-wide standards regulating noise. This chapter is not intended to establish thresholds of significance for the purpose of any analysis required by the California Environmental Quality Act and no such thresholds are established.

(Ord. 847 § 1, 2006)

9.52.020 Exemptions.

Sound emanating from the following sources is exempt from the provisions of this chapter:

A. Facilities owned or operated by or for a governmental agency;

B. Capital improvement projects of a governmental agency;

C. The maintenance or repair of public properties;

D. Public safety personnel in the course of executing their official duties, including, but not limited to, sworn peace officers, emergency personnel and public utility personnel. This exemption includes, without limitation, sound emanating from all equipment used by such personnel, whether stationary or mobile;

E. Public or private schools and school-sponsored activities;

F. Agricultural operations on land designated "Agriculture" in the Riverside County general plan, or land zoned A-l (light agriculture), A-P (light agriculture with poultry), A-2 (heavy agriculture), A-D (agriculture-dairy) or C/V (citrus/vineyard), provided such operations are carried out in a manner consistent with accepted industry standards. This exemption includes, without limitation, sound emanating from all equipment used during such operations, whether stationary or mobile;

G. Wind energy conversion systems (WECS), provided such systems comply with the WECS noise provisions of Riverside County Ordinance No. 348;

H. Private construction projects located one-quarter of a mile or more from an inhabited dwelling;

I. Private construction projects located within one-quarter of a mile from an inhabited dwelling, provided that:

   1. Construction does not occur between the hours of six p.m. and six a.m. during the months of June through September, and

   2. Construction does not occur between the hours of six p.m. and seven a.m. during the months of October through May;

J. Property maintenance, including, but not limited to, the operation of lawnmowers, leaf blowers, etc., provided such maintenance occurs between the hours of seven a.m. and eight p.m.;

K. Motor vehicles, other than off-highway vehicles. This exemption does not include sound emanating from motor vehicle sound systems;

L. Heating and air conditioning equipment;

M. Safety, warning and alarm devices, including, but not limited to, house and car alarms, and other warning devices that are designed to protect the public health, safety, and welfare;

N. The discharge of firearms consistent with all state laws.

(Ord. 847 § 2, 2006)

9.52.030 Definitions.

As used in this chapter, the following terms shall have the following meanings:

"Audio equipment" means a television, stereo, radio, tape player, compact disc player, mp3 player, I-POD or other similar device.

"Decibel (dB)" means a unit for measuring the relative amplitude of a sound equal approximately to the smallest difference normally detectable by the human ear, the range of which includes approximately one hundred thirty (130) decibels on a scale beginning with zero decibels for the faintest detectable sound. Decibels are measured with a sound level meter using different methodologies as defined below:

1. "A-weighting (dBA)" means the standard A-weighted frequency response of a sound level meter, which de-emphasizes low and high frequencies of sound in a manner similar to the human ear for moderate sounds.

2. "Maximum sound level (L_{max})" means the maximum sound level measured on a sound level meter.

"Governmental agency" means the United States, the state of California, Riverside County, any city within Riverside County, any special district within Riverside County or any combination of these agencies.

"Land use permit" means a discretionary permit issued by Riverside County pursuant to Riverside County Ordinance No. 348.

"Motor vehicle" means a vehicle that is self-propelled.

"Motor vehicle sound system" means a stereo, radio, tape player, compact disc player, mp3 player, I-POD or other similar device.

"Noise" means any loud, discordant or disagreeable sound.

"Occupied property" means property upon which is located a residence, business or industrial or manufacturing use.

"Off-highway vehicle" means a motor vehicle designed to travel over any terrain.

"Public or private school" means an institution conducting academic instruction at the preschool, elementary school, junior high school, high school, or college level.

"Public property" means property owned by a governmental agency or held open to the public, including, but not limited to, parks, streets, sidewalks, and alleys.

"Sensitive receptor" means a land use that is identified as sensitive to noise in the noise element of the Riverside County general plan, including, but not limited to, residences, schools, hospitals, churches, rest homes, cemeteries or public libraries.

"Sound-amplifying equipment" means a loudspeaker, microphone, megaphone or other similar device.

"Sound level meter" means an instrument meeting the standards of the American National Standards Institute for Type 1 or Type 2 sound level meters or an instrument that provides equivalent data.

(Ord. 847 § 3, 2006)

9.52.040 General sound level standards.

No person shall create any sound, or allow the creation of any sound, on any property that causes the exterior sound level on any other occupied property to exceed the sound level standards set forth in Table 1.

TABLE 1

9.52.050 Sound level measurement methodology.

Sound level measurements may be made anywhere within the boundaries of an occupied property. The actual location of a sound level measurement shall be at the discretion of the enforcement officials identified in Section 9.52.080 of this chapter. Sound level measurements shall be made with a sound level meter. Immediately before a measurement is made, the sound level meter shall be calibrated utilizing an acoustical calibrator meeting the standards of the American National Standards Institute. Following a sound level measurement, the calibration of the sound level meter shall be re-verified. Sound level meters and calibration equipment shall be certified annually.

(Ord. 847 § 5, 2006)

9.52.060 Special sound sources standards.

The general sound level standards set forth in Section 9.52.040 of this chapter apply to sound emanating from all sources, including the following special sound sources, and the person creating, or allowing the creation of, the sound is subject to the requirements of that section. The following special sound sources are also subject to the following additional standards, the failure to comply with which constitutes separate violations of this chapter:

A. Motor Vehicles.

1. Off-Highway Vehicles.

a. No person shall operate an off-highway vehicle unless it is equipped with a USDA-qualified spark arrester and a constantly operating and properly maintained muffler. A muffler is not considered constantly operating and properly maintained if it is equipped with a cutout, bypass or similar device.

b. No person shall operate an off-highway vehicle unless the noise emitted by the vehicle is not more than ninety-six (96) dBA if the vehicle was manufactured on or after January 1, 1986 or is not more than one hundred one (101) dBA if the vehicle was manufactured before January 1, 1986. For purposes of this subsection, emitted noise shall be measured a distance of twenty (20) inches from the vehicle tailpipe using test procedures established by the Society of Automotive Engineers under Standard J-1287.

2. Sound Systems. No person shall operate a motor vehicle sound system, whether affixed to the vehicle or not, between the hours of ten p.m. and eight a.m., such that the sound system is audible to the human ear inside any inhabited dwelling. No person shall operate a motor vehicle sound system, whether affixed to the vehicle or not, at any other time such that the sound system is audible to the human ear at a distance greater than one hundred (100) feet from the vehicle.

B. Power Tools and Equipment. No person shall operate any power tools or equipment between the hours of ten p.m. and eight a.m. such that the power tools or equipment are audible to the human ear inside an inhabited dwelling other than a dwelling in which the power tools or equipment may be located. No person shall operate any power tools or equipment at any other time such that the power tools or equipment are audible to the human ear at a distance greater than one hundred (100) feet from the power tools or equipment.

C. Audio Equipment. No person shall operate any audio equipment, whether portable or not, between the hours of ten p.m. and eight a.m. such that the equipment is audible to the human ear inside an inhabited dwelling other than a dwelling in which the equipment may be located. No person shall operate any audio equipment, whether portable or not, at any other time such that the equipment is audible to the human ear at a distance greater than one hundred (100) feet from the equipment.

D. Sound-Amplifying Equipment and Live Music. No person shall install, use or operate sound-amplifying equipment, or perform, or allow to be performed, live music unless such activities comply with the following requirements. To the extent that these requirements conflict with any conditions of approval attached to an underlying land use permit, these requirements shall control:

1. Sound-amplifying equipment or live music is prohibited between the hours of ten p.m. and eight a.m.

2. Sound emanating from sound-amplifying equipment or live music at any other time shall not be audible to the human ear at a distance greater than two hundred (200) feet from the equipment or music.

(Ord. 847 § 6, 2006)

9.52.070 Exceptions.

Exceptions may be requested from the standards set forth in Section 9.52.040 or 9.52.060 of this chapter and may be characterized as construction-related, single-event or continuous-events exceptions.

A. Application and Processing.

1. Construction-Related Exceptions. An application for a construction-related exception shall be made to and considered by the director of building and safety on forms provided by the building and safety department and shall be accompanied by the appropriate filing fee. No public hearing is required.

2. Single-Event Exceptions. An application for a single-event exception shall be made to and considered by the planning director on forms provided by the planning department and shall be accompanied by the appropriate filing fee. No public hearing is required.

3. Continuous-Events Exceptions. An application for a continuous-events exception shall be made to the planning director on forms provided by the planning department and shall be accompanied by the appropriate filing fee. Upon receipt of an application for a continuous-events exception, the planning director shall set the matter for public hearing before the planning commission, notice of which shall be given as provided in Section 18.26c of Riverside County Ordinance No. 348. Notwithstanding the above, an application for a continuous-events exception that is associated with an application for a land use permit shall be processed concurrently with the land use permit in the same manner that the land use permit is required to be processed.

B. Requirements for Approval. The appropriate decisionmaking body or officer shall not approve an exception application unless the applicant demonstrates that the activities described in the application would not be detrimental to the health, safety or general welfare of the community. In determining whether activities are detrimental to the health, safety or general welfare of the community, the appropriate decisionmaking body or officer shall consider such factors as the proposed duration of the activities and their location in relation to sensitive receptors. If an exception application is approved, reasonable conditions may be imposed to minimize the public detriment, including, but not limited to, restrictions on sound level, sound duration and operating hours.

C. Appeals. The director of building and safety's decision on an application for a construction-related exception is considered final. The planning director's decision on an application for a single-event exception is considered final. After making a decision on an application for a continuous-events exception, the appropriate decisionmaking body or officer shall mail notice of the decision to the applicant. Within ten (10) calendar days after the mailing of such notice, the applicant or an interested person may appeal the decision to the board of supervisors. Upon receipt of an appeal and payment of the appropriate appeal fee, the clerk of the board shall set the matter for hearing not less than five days nor more than thirty (30) days thereafter and shall give written notice of the hearing in the same manner as notice of the hearing was given by the appropriate hearing officer or body. The board of supervisors shall render its decision within thirty (30) days after the appeal hearing is closed.

D. Effect of a Pending Continuous-Events Exception Application. For a period of one hundred eighty (180) days from the effective date of this chapter, no person creating any sound prohibited by this chapter shall be considered in violation of this chapter if the sound is related to a use that is operating pursuant to an approved land use permit, if an application for a continuous-events exception has been filed to sanction the sound and if a decision on the application is pending.

(Ord. 847 § 7, 2006)

9.52.080 Enforcement.

The Riverside County sheriff and code enforcement shall have the primary responsibility for enforcing this chapter; provided, however, the sheriff and code enforcement may be assisted by the public health department. Violations shall be prosecuted as described in Section 9.52.100 of this chapter, but nothing in this chapter shall

prevent the sheriff, code enforcement or the department of public health from engaging in efforts to obtain voluntary compliance by means of warnings, notices, or educational programs.

(Ord. 847.1 § 1, 2007: Ord. 847 § 8, 2006)

9.52.090 Duty to cooperate.

No person shall refuse to cooperate with, or obstruct, the enforcement officials identified in Section 9.52.080 of this chapter when they are engaged in the process of enforcing the provisions of this chapter. This duty to cooperate may require a person to extinguish a sound source so that it can be determined whether sound emanating from the source violates the provisions of this chapter.

(Ord. 847 § 9, 2006)

9.52.100 Violations and penalties.

Any person who violates any provision of this chapter once or twice within a one hundred eighty (180) day period shall be guilty of an infraction. Any person who violates any provision of this chapter more than twice within a one hundred eighty (180) day period shall be guilty of a misdemeanor. Each day a violation is committed or permitted to continue shall constitute a separate offense and shall be punishable as such. Penalties shall not exceed the following amounts:

A. For the first violation within a one hundred eighty (180) day period, the minimum mandatory fine shall be five hundred dollars ($500.00).

B. For the second violation within a one hundred eighty (180) day period, the minimum mandatory fine shall be seven hundred fifty dollars ($750.00).

C. For any further violations within a one hundred eighty (180) day period, the minimum mandatory fine shall be one thousand dollars ($1,000.00) or imprisonment in the county jail for a period not exceeding six months, or both.

(Ord. 847 § 10, 2006)

ORDINANCE NO. 847
(AS AMENDED THROUGH 847.1)
AN ORDINANCE OF THE COUNTY OF RIVERSIDE AMENDING
ORDINANCE NO. 847 REGULATING NOISE

The Board of Supervisors of the County of Riverside, State of California, ordains as follows:

Section 1. Findings. The Board of Supervisors finds that the unnecessary, excessive and annoying noises from various sources within the unincorporated territory of the County of Riverside control the health, safety and welfare of the residents of the County and that a comprehensive noise control ordinance is necessary to protect the public health, safety and welfare.

Section 2. Section 2 of Ordinance No. 847 is amended to read as follows:

The following words, phrases and terms shall have the meanings ascribed to them in this section, except where the context clearly indicates a different meaning:

(a) "Ambient noise" means the all-encompassing noise associated with a given environment, usually a composite of sounds from many sources near and far, but does not include noise generated by the operation of a business or industry.

(b) "Commercial property" means any property used for the purpose of buying and selling goods and services, including, but not limited to, hotels, motels, offices, restaurants, theaters, retail stores, and shopping centers.

(c) "Construction" means any site preparation, assembly, erection, substantial repair, alteration, or similar action, but excluding demolition, of public or private rights-of-way, structures, utilities or similar property.

(d) "Decibel" means a unit for measuring the volume of sound, equal to twenty times the logarithm to the base ten of the ratio of the pressure of the sound measured to the reference pressure, which is twenty micropascals (20 micronewtons per square meter). Decibels are abbreviated "dB." Unless otherwise specified, the decibel value shall be measured by the "A" weighted scale ("dBA") which reflects the relative loudness perceived by the human ear. The "A" weighted scale is the scale used in the American National Standards Institute (ANSI) Publication S1.4-1983 (R2006) "Specification for Sound Level Meters" or the most recent publication of the ANSI specification for sound level meters. If the "A" weighted scale is not used, the scale shall be clearly indicated.

(e) "Emergency" means any occurrence or circumstance involving actual or imminent physical trauma or property damage which demands immediate action.

(f) "Emergency work" means any work performed for the purpose of preventing or alleviating the physical trauma or property damage threatened or caused by an emergency.

(g) "Fixed noise source" means a stationary device which creates sounds while fixed or motionless, including, but not limited to, residential, agricultural, industrial and commercial machinery and equipment, pumps, fans, compressors, air conditioners and refrigeration units.

(h) "Impulsive noise" means a noise characterized by brief excursions of pressure (acoustic impulses) lasting less than one second, as measured with a sound level meter set for fast response.

(i) "Industrial property" means any property used for the purpose of manufacturing goods and services, including, but not limited to, factories, refineries, and processing plants.

(j) "Mobile noise source" means any noise source other than a fixed noise source.

(k) "Multiple-family dwelling" means any property containing more than one dwelling unit, including, but not limited to, duplexes, apartments, condominiums, and townhouses.

(l) "Noise disturbance" means any sound which endangers or injures the safety or health of humans or animals, or annoys or disturbs a reasonable person of normal sensitivities, or endangers or injures personal or real property.

(m) "Noise level" means the maximum sound pressure level measured over a given period of time.

(n) "Noise sensitive area" means any area designated pursuant to the Noise Element of the General Plan, or any area containing a hospital, rest home, long-term care facility, mental care facility, or any area designated by the Board of Supervisors.

(o) "Person" means any person, firm, association, partnership, corporation, limited liability company, or any agency, district or political subdivision of the State of California or any agency of the federal government.

(p) "Public property" means any property owned by the County of Riverside, any city, any school district, any special district, the State of California, or the federal government.

(q) "Public right-of-way" means any street, avenue, boulevard, highway, sidewalk, alley or similar place which is owned or controlled by a public entity.

(r) "Residential property" means any property used for human habitation, including, but not limited to, single-family dwellings, multiple-family dwellings, mobile homes, and recreational vehicles.

(s) "Sound level meter" means an instrument, including a microphone, amplifier, and frequency weighting networks, for the measurement of sound levels which meets or exceeds the requirements pertinent for Type 2 meters in ANSI Publication S1.4-1983 (R2006) "Specification for Sound Level Meters" or the most recent publication of the ANSI specification for sound level meters.

(t) "Sound pressure level" means twenty times the logarithm to the base ten of the ratio of the pressure of a sound to the reference pressure, which is twenty micropascals (20 micronewtons per square meter). The sound pressure level is denoted in decibels.

(u) "Weekday" means any day, Monday through Friday, which is not a recognized holiday.

(v) "Weekend" means any Saturday, Sunday, or recognized holiday.

Section 3. Section 3 of Ordinance No. 847 is amended to read as follows:

Except as otherwise provided in this ordinance, it shall be unlawful for any person to make, continue, or cause to be made or continued any noise disturbance.

Section 4. Section 4 of Ordinance No. 847 is amended to read as follows:

Except as otherwise provided in this ordinance, the following acts, among others, are declared to be noise disturbances:

(a) Operating or causing the operation of any mobile noise source in such a manner as to create a noise level which exceeds the limits set forth for the receiving land use in Section 7 of this ordinance.

(b) Operating or causing the operation of any fixed noise source in such a manner as to create a noise level which exceeds the limits set forth for the receiving land use in Section 7 of this ordinance.

(c) Operating or causing the operation of any device that creates an impulsive noise in such a manner as to create a noise level which exceeds the limits set forth for the receiving land use in Section 7 of this ordinance.

(d) Operating or causing the operation of any device, other than a mobile noise source, that creates a noise level which exceeds the ambient noise level by more than 10 dB(A) when measured at the boundary of the property on which the device is located. If the ambient noise level is 65 dB(A) or greater, then the noise level created by the device shall not exceed the ambient noise level by more than 5 dB(A) when measured at the boundary of the property on which the device is located.

(e) Operating or causing the operation of any device that creates a vibration which is above the vibration perception threshold of an individual at or beyond the boundary of the property on which the device is located. For the purposes of this section, vibration perception threshold means the minimum ground- or structure-borne vibrational motion necessary to cause a normal person to be aware of the vibration by such direct means as, but not limited to, sensation by touch or visual observation of moving objects.

(f) Operating or causing the operation of any tools or equipment used in construction, drilling, repair, alteration, or demolition work between weekday hours of 7:00 p.m. and 7:00 a.m. or at any time on weekends or holidays, such that the noise level created exceeds the noise level standards as set forth in Section 7 of this ordinance, except for emergency work of public service utilities or by variance issued pursuant to Section 12 of this ordinance.

(g) Operating or causing the operation of any equipment used in forestry maintenance on any day between the hours of 10:00 p.m. and 6:00 a.m., such that the noise level created exceeds the noise level standards as set forth in Section 7 of this ordinance.

(h) Any activity to which the provisions of Section 5 or 6 of this ordinance are applicable.

(i) Any activity to which the provisions of Section 8 of this ordinance are applicable.

(j) Any activity to which the provisions of Section 9 of this ordinance are applicable.

(k) Any activity to which the provisions of Section 10 of this ordinance are applicable.

(l) Any activity to which the provisions of Section 11 of this ordinance are applicable.

Section 5. Section 5 of Ordinance No. 847 is amended to read as follows:

(a) Except as otherwise provided in this ordinance, it shall be unlawful for any person to operate or cause the operation of any motor vehicle on any public right-of-way in such a manner as to create a noise level which exceeds the following limits:

(1) 80 dB(A) for a motor vehicle with a manufacturer's gross vehicle weight rating of 6,000 pounds or more, measured at a distance of 50 feet or more from the motor vehicle; or

(2) 76 dB(A) for a motor vehicle with a manufacturer's gross vehicle weight rating of less than 6,000 pounds, measured at a distance of 50 feet or more from the motor vehicle.

(b) Except as otherwise provided in this ordinance, it shall be unlawful for any person to operate or cause the operation of any motor vehicle on any public right-of-way in such a manner as to create a noise level which exceeds the following limits:

(1) 86 dB(A) for a motor vehicle with a manufacturer's gross vehicle weight rating of 6,000 pounds or more, measured at a distance of 50 feet or more from the motor vehicle; or

(2) 82 dB(A) for a motor vehicle with a manufacturer's gross vehicle weight rating of less than 6,000 pounds, measured at a distance of 50 feet or more from the motor vehicle.

(c) Except as otherwise provided in this ordinance, it shall be unlawful for any person to operate or cause the operation of any motor vehicle on any public right-of-way in such a manner as to create a noise level which exceeds the following limits:

(1) 92 dB(A) for a motor vehicle with a manufacturer's gross vehicle weight rating of 6,000 pounds or more, measured at a distance of 50 feet or more from the motor vehicle; or

(2) 88 dB(A) for a motor vehicle with a manufacturer's gross vehicle weight rating of less than 6,000 pounds, measured at a distance of 50 feet or more from the motor vehicle.

OFF-SITE TRAFFIC NOISE LEVEL CALCULATIONS

This page intentionally left blank

FHWA-RD-77-108 HIGHWAY NOISE PREDICTION MODEL (9/12/2021)

Scenario: E
Road Name: Tobacco Rd.
Road Segment: s/o Placentia Av.
Project Name: Thrifty Oil
Job Number: 15749

SITE SPECIFIC INPUT DATA

Highway Data

Average Daily Traffic (Adt):	91 vehicles
Peak Hour Percentage:	10.00%
Peak Hour Volume:	9 vehicles
Vehicle Speed:	40 mph
Near/Far Lane Distance:	12 feet

Site Data

Barrier Height:	**0.0 feet**
Barrier Type (0-Wall, 1-Berm):	0.0
Centerline Dist. to Barrier:	37.0 feet
Centerline Dist. to Observer:	37.0 feet
Barrier Distance to Observer:	0.0 feet
Observer Height (Above Pad):	5.0 feet
Pad Elevation:	0.0 feet
Road Elevation:	0.0 feet
Road Grade:	0.0%
Left View:	-90.0 degrees
Right View:	90.0 degrees

NOISE MODEL INPUTS

Site Conditions (Hard = 10, Soft = 15)

Autos:	15
Medium Trucks (2 Axles):	15
Heavy Trucks (3+ Axles):	15

Vehicle Mix

VehicleType	Day	Evening	Night	Daily
Autos:	75.5%	14.0%	10.5%	92.00%
Medium Trucks:	48.0%	2.0%	50.0%	3.00%
Heavy Trucks:	48.0%	2.0%	50.0%	5.00%

Noise Source Elevations (in feet)

Autos:	0.000		
Medium Trucks:	2.297		
Heavy Trucks:	8.004	Grade Adjustment:	0.0

Lane Equivalent Distance (in feet)

Autos:	36.851
Medium Trucks:	36.610
Heavy Trucks:	36.634

FHWA Noise Model Calculations

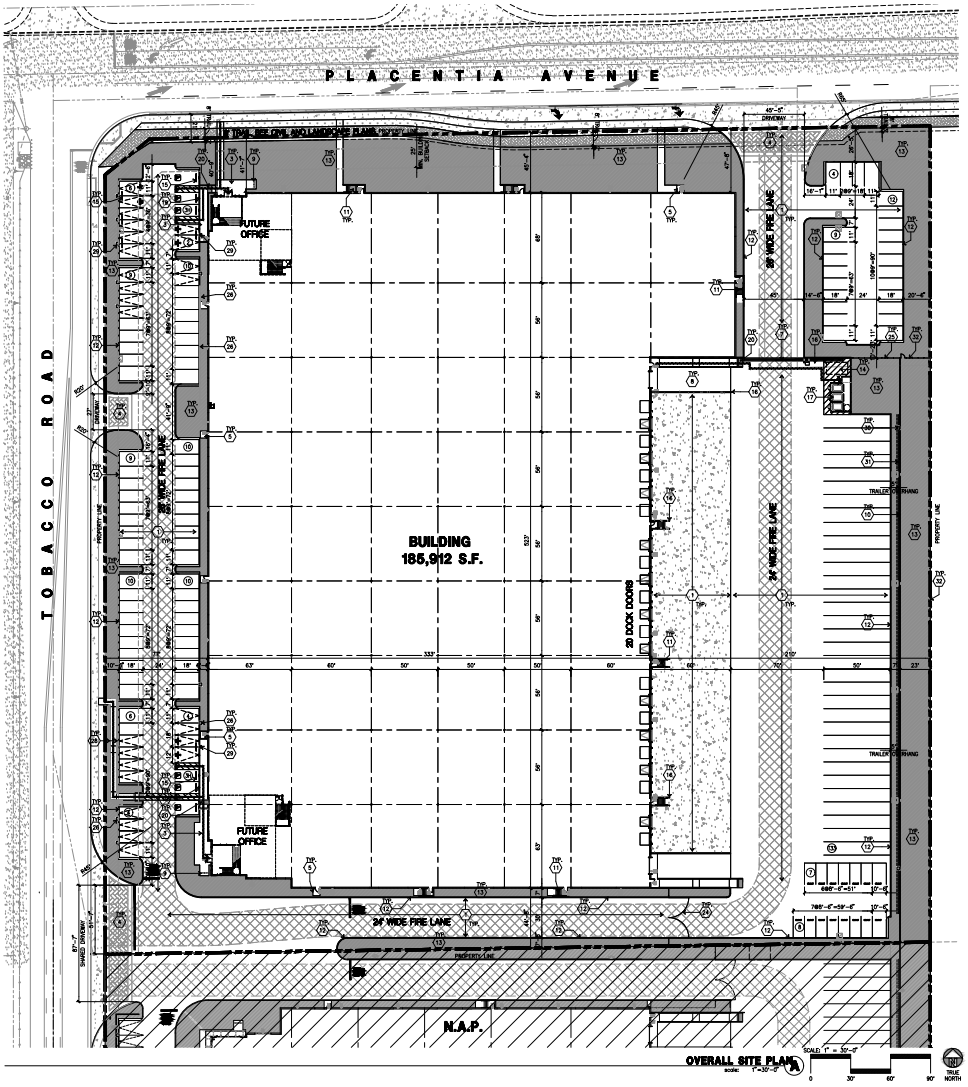
MEMORANDUM

URBAN | CROSSROADS

DATE: January 30, 2025
TO: Kevin Tsang, County of Riverside
FROM: Charlene So, Urban Crossroads
JOB NO: 15749-07 TA Memo

THRIFTY OIL WAREHOUSE (PPT230048, PDA8407, OAPL2300972) FOCUSED TRAFFIC ASSESSMENT

Urban Crossroads has prepared this focused traffic assessment in support of the proposed Thrifty Oil Warehouse development (**Project**), which is located on the southeast corner of Tobacco Road and Placentia Avenue at 23641 Placentia Avenue in unincorporated County of Riverside (Assessor's Parcel Numbers **APNs** 317-260-017 & -018). The purpose of this focused traffic assessment is to evaluate potential traffic deficiencies under Existing plus Ambient Growth plus Project (**EAP**) (2026) traffic conditions at the proposed access points, evaluate the site adjacent intersection of Tobacco Road at Placentia Avenue, and to identify necessary improvements to address any intersection deficiencies. The following assessment follows the County of Riverside's Transportation Analysis Guidelines for Level of Service and Vehicle Miles Traveled (dated December 2020) (**County Guidelines**) and the approved scoping agreement. The approved Traffic Scoping Agreement is included in Attachment A.



SUMMARY OF FINDINGS

The Project driveways and the intersection of Tobacco Road at Placentia Avenue are anticipated to operate at an acceptable LOS during the peak hours under EAP (2026) traffic conditions. No improvements have been identified for the study area intersections beyond those necessary to facilitate site access. Driveway 1 is currently designed to accommodate passenger cars, and no modifications are necessary. Similarly, Driveway 2 is currently designed as a shared driveway that will serve both the proposed Project and the southerly PPT220047 and does not require any modifications to accommodate either passenger cars or heavy trucks. Attachment F identifies specific curb radii improvements needed at the southwest and southeast corners of both Tobacco Road and Driveway 3 along Placentia Avenue for both the Opening Day and Ultimate roadway conditions. Lastly, no queuing issues are anticipated with the proposed striping (refer to Exhibits 1 and2 of Attachment F for concept striping) and turn pocket length recommendations under EAP (2026) traffic conditions. However, a painted two-way-left-turn lane is recommended in the vicinity of Driveway 3 and the adjacent Wellness Center driveway immediately to the east in order to accommodate left-turning vehicles adequately into both driveways.

PROJECT OVERVIEW

The proposed Project includes the development of a 185,912-square-foot warehouse building comprised of 176,912-square-feet of warehousing space, and 9,000-square-feet of office space (with 4,500-square-feet on each floor). However, in an effort to conduct a conservative analysis, this traffic assessment is based on the evaluation of a 186,695-square-foot warehouse building which includes 171,695-square-feet of warehousing use and 15,000-square-feet of office space (7,500-square-feet on first and second floors). The preliminary site plan for the proposed Project is shown on Exhibit 1. Access to the site would be accommodated via two full access driveways located on Tobacco Road and a full access driveway on Placentia Avenue (e.g., no turn restrictions). Trucks would have access via the Placentia Avenue driveway and the southerly driveway on Tobacco Road and passenger car traffic would have access to all three driveways. The southerly Project driveway on Tobacco Road is to be a shared driveway with PPT220047. Truck traffic to and from the site occurs along Placentia Avenue between the Project and the I-215 Freeway interchange at Placentia Avenue. The Project's anticipated opening year is 2026.

EXHIBIT 1: PRELIMINARY SITE PLAN

ASSUMPTIONS AND METHODOLOGIES

This section provides a review of the assumptions and methodologies utilized for this traffic assessment, consistent with the County Guidelines. The definitions of Level of Service (**LOS**) for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 7th Edition Highway Capacity Manual (**HCM**) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. The HCM uses different procedures depending on the type of intersection control.

SIGNALIZED INTERSECTION OPERATIONS ANALYSIS METHODOLOGY

Intersection LOS operations are based on an intersection's average control delay. Control delays include initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. The traffic modeling and signal timing optimization software package Synchro 12 has been utilized to analyze signalized intersections. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

UNSIGNALIZED INTERSECTION OPERATIONS ANALYSIS METHODOLOGY

The LOS rating is based on the weighted average control delay expressed in seconds per vehicle. At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. Delay for the intersection is reported for the worst individual movement at a two-way stop-controlled intersection. For all-way stop controlled intersections, LOS is computed for the intersection as a whole (average delay).

LEVEL OF SERVICE (LOS) CRITERIA

The definition of an intersection deficiency has been obtained from the County of Riverside General Plan. Riverside County General Plan Policy C 2.1 states that the County will maintain the following County-wide target LOS:

The following minimum target levels of service have been designated for the review of development proposals in the unincorporated areas of Riverside County with respect to transportation impacts on roadways designated in the Riverside County Circulation Plan which are currently County maintained, or are intended to be accepted into the County maintained roadway system:

- *LOS C shall apply to all development proposals in any area of the Riverside County not located within the boundaries of an Area Plan, as well as those areas located within the following Area Plans: REMAP, Eastern Coachella Valley, Desert Center, Palo Verde Valley, and those non-Community Development areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley, and Temescal Canyon Area Plans.*

- *LOS D shall apply to all development proposals located within any of the following Area Plans: Eastvale, Jurupa, Highgrove, Reche Canyon/Badlands, Lakeview/Nuevo, Sun City/Menifee Valley, Harvest Valley/Winchester, Southwest Area, The Pass, San Jacinto Valley, Western Coachella Valley and those Community Development Areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.*
- *LOS E may be allowed by the Board of Supervisors within designated areas where transit-oriented development and walkable communities are proposed.*

The applicable minimum LOS utilized for the purposes of this analysis is LOS D per the County-wide target LOS for projects located within the Mead Valley Area Plan.

DEFICIENCY CRITERIA

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies. The following deficiency criteria have been utilized for the County of Riverside. To determine whether the addition of project-related traffic at a study intersection would result in a deficiency, the following will be utilized:

- A deficiency occurs at study area intersections if the pre-Project condition is at or better than LOS D (i.e., acceptable LOS), and the addition of project trips causes the peak hour LOS of the study area intersection to operate at unacceptable LOS (i.e., LOS E or F). Per the County of Riverside traffic study guidelines, for intersections currently operating at unacceptable LOS (LOS E or F), a deficiency will occur if the Project contributes peak hour trips to pre-project traffic conditions.

PROJECT TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment onto the study area roadway network.

TRIP GENERATION

Trip generation represents the amount of traffic, which is both attracted to, and produced by, a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to, and produced by, the specific land uses being proposed for a given development.

In order to develop the traffic characteristics of the proposed Project, trip-generation statistics published in the Institute of Transportation Engineers (**ITE**) Trip Generation Manual (11th Edition, 2021) were used to estimate the trip generation. For purposes of this analysis, the following land use code and vehicle mix has been utilized:

- Warehousing – ITE Land Use Code 150 has been used to derive site-specific trip generation estimates for the proposed Project. The vehicle mix has also been obtained from the ITE's latest Trip Generation Manual. The truck percentages were further broken down by axle type per the following South Coast Air Quality Management District (**SCAQMD**) recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

As noted in Table 1, refinements to the raw trip generation estimates have been made to provide a more detailed breakdown of trips between passenger cars and trucks. Trip generation for heavy

trucks was further broken down by truck type (or axle type). The total truck percentage is comprised of 3 different truck types: 2-axle, 3-axle, and 4+-axle trucks. Passenger Car Equivalent (**PCE**) factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in County Guidelines.

[2] TSF = thousand square feet

[3] Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.
Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

The Project is estimated to generate a total of 322 two-way trips per day on a typical weekday with approximately 30 AM peak hour trips and 35 PM peak hour as shown in Table 2 (actual vehicles). Consistent with the County Guidelines, the PCE values shown in Table 2 will be utilized for the purposes of determining if the Project requires peak hour intersection operations analyses. The Project is estimated to generate a total of 492 two-way PCE trips per day on a typical weekday with approximately 38 PCE AM peak hour trips and 43 PCE PM peak hour as shown in Table 2.

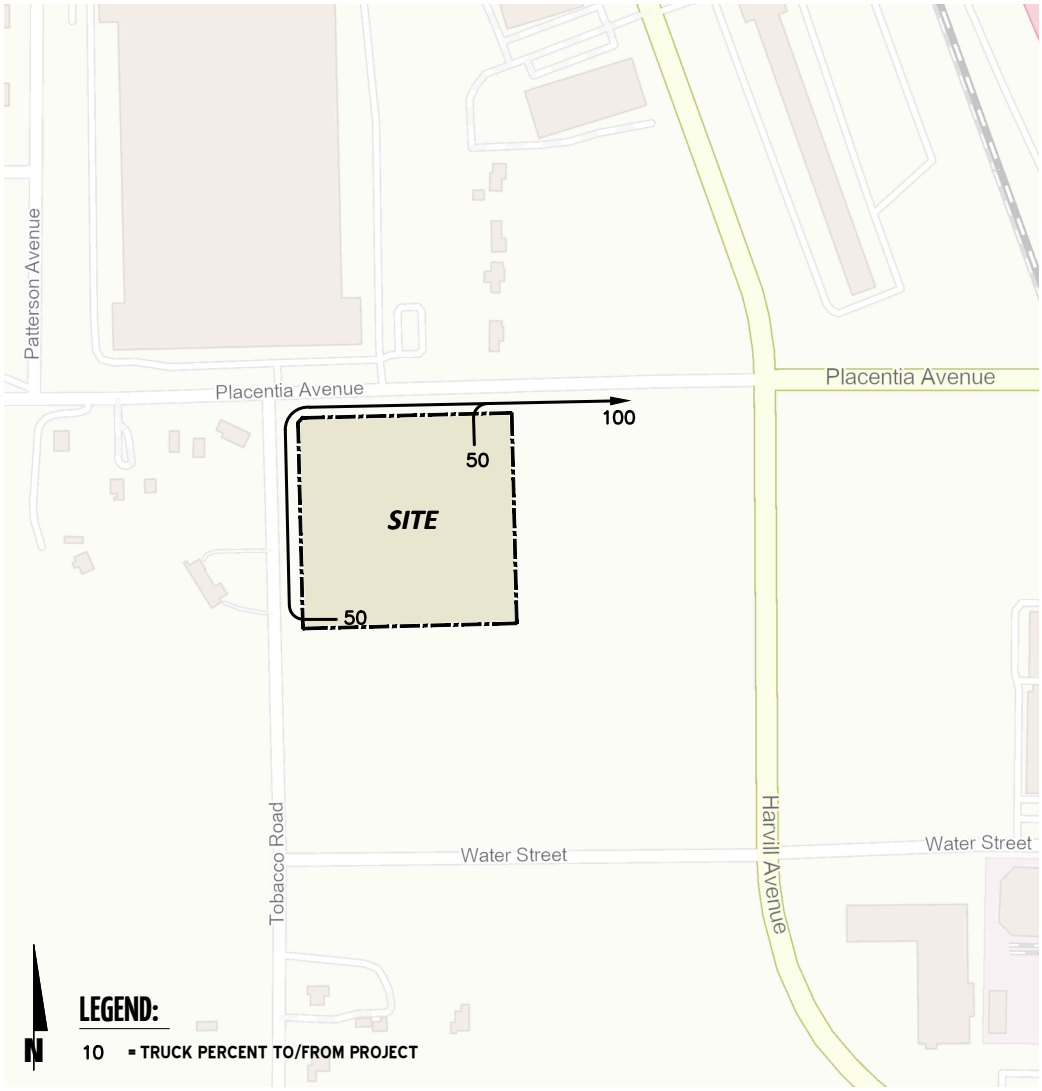
TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions, or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. In addition, truck routes for neighboring agencies have been taken into consideration in the development of the trip distribution patterns for heavy trucks. There are no weight restrictions on any of the surrounding roadways that lead to the I-215 Freeway (Tobacco Road and Placentia Avenue). However, per the County's Board Policy C3.8, trucks are to avoid driving through residential areas. As such, the Project's truck travel patterns are likely to be limited to Tobacco Road (Project to Placentia Avenue) and Placentia Avenue (Tobacco Road to I-215 Freeway). Based on the County's Board Policy, the Project could not send trucks west on Placentia Avenue, to Patterson Avenue, then to Rider Street as there are existing residential uses along one or more of these streets.

Exhibit 2 shows the Project truck trip distribution patterns while Exhibit 3 shows the Project passenger car trip distribution patterns. Per the County's comments, the truck trip distribution patterns assume Project trucks would utilize Placentia Avenue to access the I-215 Freeway.

EXHIBIT 2: PROJECT (TRUCK) TRIP DISTRIBUTION



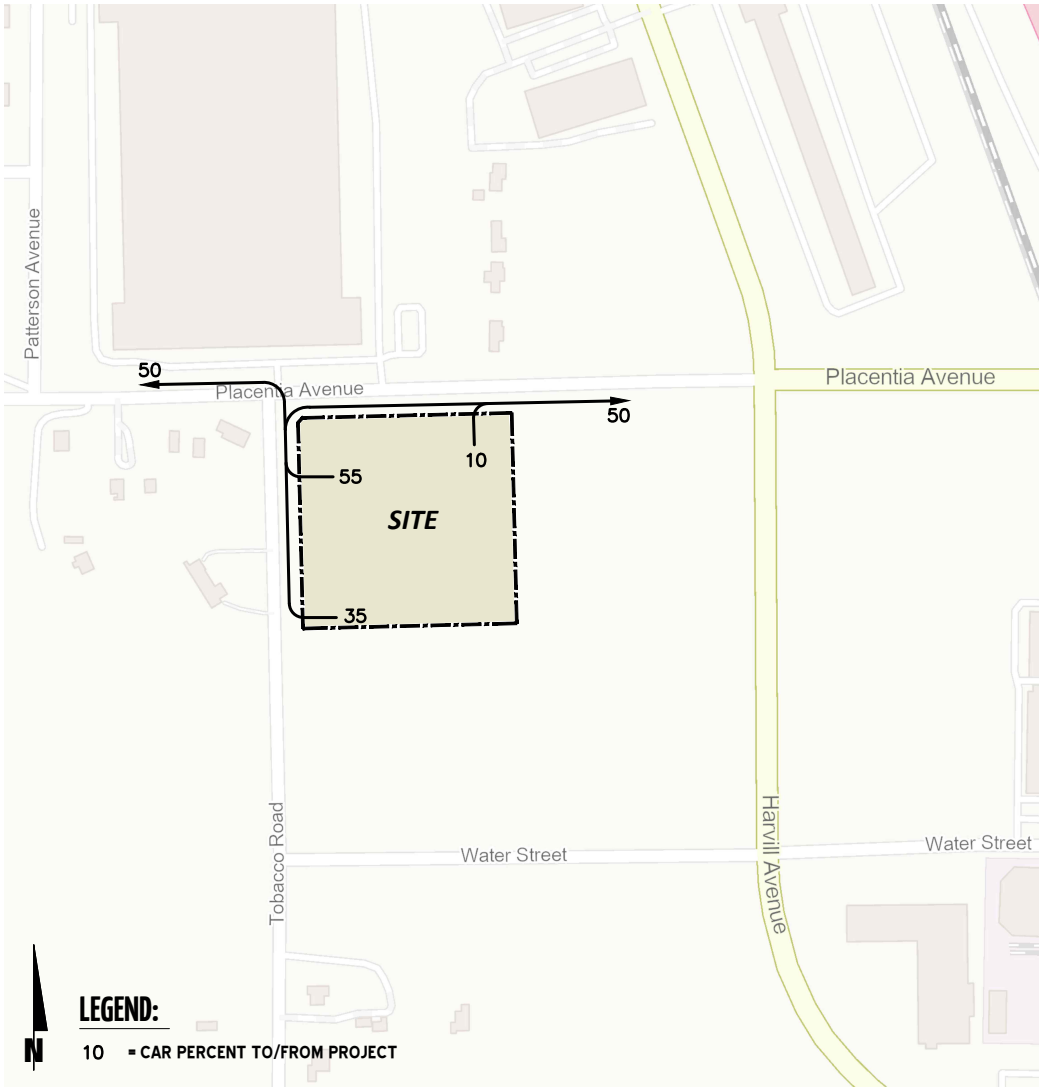


EXHIBIT 3: PROJECT (PASSENGER CAR) TRIP DISTRIBUTION

PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, the Project only ADT and peak hour intersection turning movement volumes are shown in Exhibit 4.

STUDY AREA

Exhibit 5 provides the study area for the proposed Project, which consists of Tobacco Road & Placentia Avenue, plus all Project driveways. The study area has been reviewed by County staff as part of the scoping process.

EXHIBIT 5: STUDY AREA

#	Intersections
1	Tobacco Rd. & Placentia Av.
2	Tobacco Rd. & Driveway 1
3	Tobacco Rd. & Driveway 2
4	Driveway 3 & Placentia Av.

EXISTING (2024) CONDITIONS

Traffic count data was collected for the intersection of Tobacco Road at Placentia Avenue in addition to daily traffic volumes along both Tobacco Road and Placentia Avenue. Existing traffic count data is provided in Attachment B along with volume development worksheets for all future analysis scenarios. Existing traffic volumes are also shown in Exhibit 6. The intersection operations analysis results are summarized in Table 3, which indicates that the existing study area intersection of Tobacco Road and Placentia Avenue is currently operating at an acceptable LOS during the peak hours. The intersection operations analysis worksheets are included in Attachment C.

TABLE 3: INTERSECTION ANALYSIS FOR EXISTING (2024) CONDITIONS

#	Intersection	Traffic Control[1]	Delay[2] (secs.)		Level of Service	
			AM	PM	AM	PM
1	Tobacco Rd. & Placentia Av.	CSS	9.1	9.1	A	A
2	Tobacco Rd. & Driveway 1		Future Intersection			
3	Tobacco Rd. & Driveway 2		Future Intersection			
4	Driveway 3 & Placentia Av.		Future Intersection			

1 CSS = Cross-Street Stop

2 Per the Highway Capacity Manual (7th Edition), for intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

00 = Average Daily Traffic (ADT)

EAP (2026) CONDITIONS

This section discusses the traffic forecasts for EAP (2026) conditions and the resulting intersection operations and traffic signal warrant analyses.

VOLUME DEVELOPMENT

This scenario includes Existing (2024) traffic volumes plus an ambient growth factor of 4.04% and the addition of Project traffic. In addition, traffic associated with PPT220047 to the south, Barker Logistics, and Placentia Truck Lot have also been added as these uses are anticipated to be open and operational within the same timeframe as the proposed Project. The proposed County Wellness Center, which is located immediately to the east of the proposed Project, was also considered; however, no traffic from the Wellness Center is anticipated to travel to and from the west on Placentia Avenue. The weekday ADT and weekday AM and PM peak hour volumes for the study area intersections are provided in Attachment B and in Exhibit 7.

INTERSECTIONS

Table 4 provides the summary of the intersection operations analysis for EAP (2026) traffic conditions. As shown in Table 4, the study area intersections are anticipated to operate at an acceptable LOS during the peak hours. It should be noted that the intersection of Tobacco Road and Placentia Avenue assumes the implementation of an all-way stop controlled intersection in order to accommodate turning trucks. The intersection operations analysis worksheets for EAP (2026) traffic conditions are provided in Attachment D.

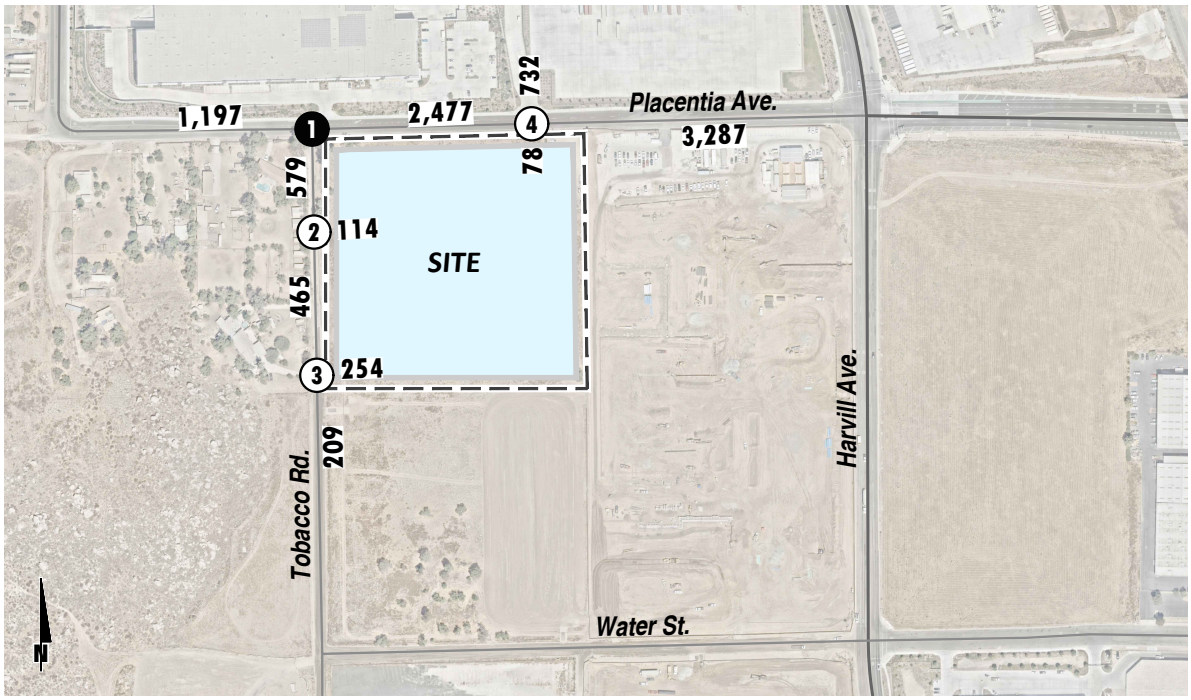

TABLE 4: INTERSECTION ANALYSIS FOR EAP (2026) CONDITIONS

#	Intersection	Traffic Control[1]	Delay[2] (secs.) AM	Delay[2] (secs.) PM	Level of Service AM	Level of Service PM
1	Tobacco Rd. & Placentia Av.	**AWS**	7.7	7.7	A	A
2	Tobacco Rd. & Driveway 1	**CSS**	8.4	8.5	A	A
3	Tobacco Rd. & Driveway 2	**CSS**	8.3	8.4	A	A

LEGEND:

0 = Existing Intersection Analysis Location

(0) = Future Intersection Analysis Location

00 = Average Daily Traffic (ADT)

TRAFFIC SIGNAL WARRANTS

The term "signal warrants" refers to the list of established criteria used by the California Department of Transportation (**Caltrans**) and other public agencies to quantitatively justify or determine the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This traffic assessment uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (**CA MUTCD**). The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. Specifically, this focused traffic assessment utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for all future analysis scenarios. The study intersection has also been assessed regarding the potential need for a new traffic signal based on future Average Daily Traffic (**ADT**) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets. For the purposes of this assessment, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection. Urban warrants have been used as the posted speed limit along study area roadways is anticipated to be 40 miles per hour or lower.

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The unsignalized intersection of Tobacco Road and Placentia Avenue does not currently warrant a traffic signal under Existing traffic conditions. Traffic signal warrants have been evaluated for the future Project driveways under EAP (2026) traffic conditions based on the planning-level ADT volume-based warrants. The Project driveways are not expected to meet traffic signal warrants based on the EAP (2026) daily volumes. All traffic signal warrant analysis worksheets are provided in Attachment E.

TRUCK ACCESS

Due to the typical wide turning radius of large trucks, a truck turning template has been overlaid on the site plan at each applicable Project driveway anticipated to be utilized by heavy trucks and the site adjacent intersection of Tobacco Road at Placentia Avenue in order to determine appropriate curb radii and to verify that trucks will have sufficient space to execute turning maneuvers. A WB-67 truck (53-foot trailer) has been utilized for the purposes of this assessment. The proposed driveways are anticipated to accommodate the ingress and egress of heavy trucks under both interim and ultimate roadway conditions with the exception of:

- **Tobacco Road at Placentia Avenue** – A minimum 45-foot curb radius on the southeast corner should be accommodated under Opening Day and Ultimate roadway conditions in order to facilitate truck turns (refer to Exhibit 7 and Exhibit 11 of Attachment F). Ultimate roadway conditions also reflect an improved 35-foot curb radius on the southwest corner (Exhibit 11 in Attachment F). In the interim, trucks will be prohibited from making a northbound left turn from Tobacco Road onto Placentia Avenue and an eastbound right turn from Placentia Avenue to Tobacco Road.
- **Driveway 3 at Placentia Avenue** – The proposed curb radius on the southeast and southwest corners as currently designed will accommodate truck turns under Opening Day conditions (refer to Exhibit 8 of Attachment F). The proposed 45-foot curb radii on the southwest corner and the 65-foot curb radius on the southeast corner should be

accommodated under Ultimate roadway conditions in order to facilitate truck turns into and out of the site (refer to Exhibit 12 of Attachment F).

The interim roadway concept plan assumes existing lanes and the existing southwest corner at Tobacco Road and Placentia Avenue. The ultimate roadway concept plan identifies the future roadway improvements that would be in place per the County's standards if/when the southwestern property is developed.

With the developer being the owner of both the Project and the adjacent site to south on Tobacco Road (PPT220047) at the request of County staff, a proposed "joint use" driveway has been provided per the recommendation of County staff. Driveway 2 would require a reciprocal access agreement being approved between the two properties and put in place prior to the start of construction of the southerly building.

TRUCK STACKING

Using the WB-67 truck template, the truck stacking has been identified behind the gate and the public street at both Driveway 2 on Tobacco Road and Driveway 3 on Placentia Avenue as these are the two driveways anticipated to serve heavy trucks. As a tenant has not currently been identified for the proposed Project, the anticipated truck circulation for the building is unknown at this time. Stacking accommodated on-site is in excess to the stacking provided for other surrounding warehouse uses of comparable size in the immediate vicinity and is well more than the anticipated truck activity. Based on the Project's anticipated trip generation, no more than four (4) trucks are anticipated to arrive during either peak hour, which is approximately one (1) truck every 15 minutes. The intent of the gate operation is to remain open during business hours, however, should the tenant require gates to be closed during business operations, up to four (4) WB-67 trucks could be stored between the closed gate and Tobacco Road along Driveway 2 and up to four (4) WB-67 trucks could be stored between the gate and Placentia Avenue along Driveway 3 (refer to Exhibits 3 and 4 of Attachment F). Accommodating storage for four (4) trucks at both driveways on Tobacco Road and Placentia Avenue is significantly more truck storage space accommodated for any existing comparable site within the vicinity of the Project. A "Tenant Advisory" could be implemented to identify truck access points and stacking areas which can be supplemented with on-site signage (as needed).

SITE ACCESS/QUEUING ASSESSMENT

A queuing analysis was performed for all study area intersections under EAP (2026) traffic conditions. Queuing analysis findings are presented on Table 5. Turn pocket lengths are based on either existing or proposed lengths (refer to concept striping provided in Attachment F) and intersection locations are consistent with the measured distance between each location. As shown on Table 5, there are no movements that would experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Due to the proximity of the Project Driveway 3 and the proposed driveway serving the Wellness Center immediately to the east, it is recommended that the median be striped as a two-way-left-turn lane as opposed to striping in the left-turn pocket for either of these driveways. Worksheets for EAP (2026) traffic conditions queuing analysis are provided in Attachment G.

TABLE 5: PEAK HOUR QUEUING SUMMARY FOR EAP (2026) CONDITIONS

#	Intersection	Movement	Available Stacking Distance (Feet)	95th Percentile Queue (Feet) AM Peak Hour	95th Percentile Queue (Feet) PM Peak Hour	Acceptable?[1] AM	Acceptable?[1] PM
1	Tobacco Rd. & Placentia Av.	NBL/T/R	175	33	41	Yes	Yes
		SBL/T/R	50	30	47	Yes	Yes
		WBL	100	42	34	Yes	Yes
		WBT	480	41	43	Yes	Yes
2	Tobacco Rd. & Driveway 1	SBL/T	175	4	4	Yes	Yes
		WBL/R	40	14	33	Yes	Yes
3	Tobacco Rd. & Driveway 2	SBL	100	4	4	Yes	Yes
		WBL/R	170	28	40	Yes	Yes
4	Driveway 3 & Placentia Av.	NBL/T/R	140	13	17	Yes	Yes
		SBL/T/R	250	47	47	Yes	Yes
		WBL	50	4	9	Yes	Yes

[1] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 25 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

CONCLUSION

Based on the results of the intersection operations analysis for EAP (2026) With Project traffic conditions, the Project driveways and the intersection of Tobacco Road at Placentia Avenue are anticipated to operate at an acceptable LOS during the peak hours. As such, no improvements have been identified for the study area intersections beyond those necessary to facilitate site access. Driveway 1 is currently designed to accommodate passenger cars, and no modifications are necessary. Similarly, Driveway 2 is currently designed as a shared driveway that will serve both the proposed Project and the southerly PPT220047 and does not require any modifications to accommodate either passenger cars or heavy trucks. Attachment F identifies the curb radii improvements currently reflected on the site plan on the southwest and southeast corners of Driveway 3 and Tobacco Road along Placentia Avenue for both the Opening Day and Ultimate roadway conditions are sufficient to accommodate the truck turns. Lastly, no queuing issues are anticipated with the proposed striping (refer to Exhibit 1 and Exhibit 2 of Attachment F for concept striping) and turn pocket length recommendations under EAP (2026) traffic conditions. However, a painted two-way-left-turn lane is recommended in the vicinity of Driveway 3 and the adjacent Wellness Center driveway immediately to the east in order to accommodate left-turning vehicles adequately into both driveways.

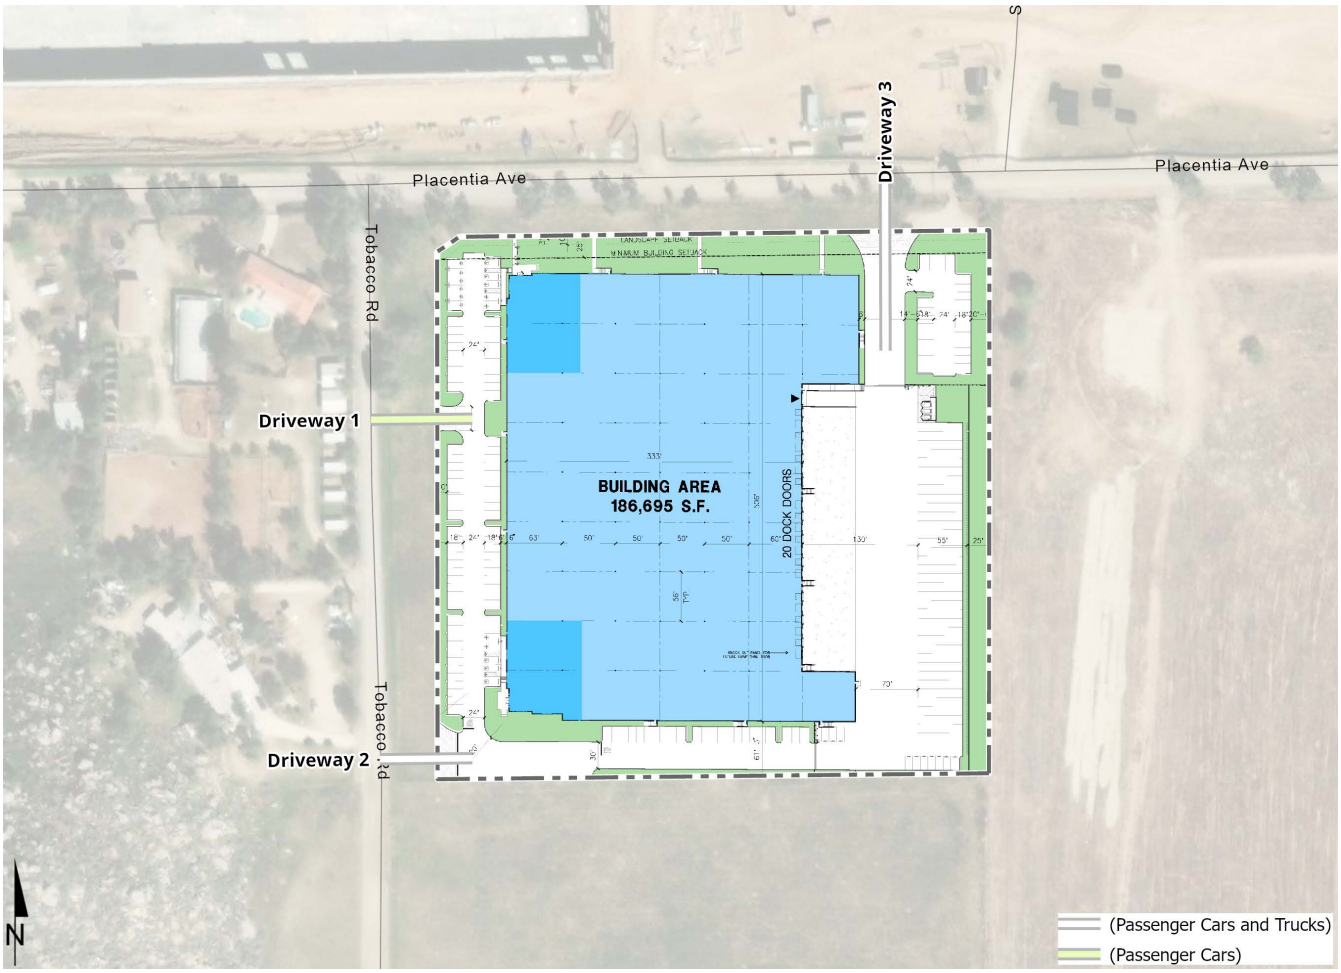
If you have any questions, please contact me directly at cso@urbanxroads.com.

ATTACHMENT A: APPROVED SCOPING AGREEMENT

MEMORANDUM

URBAN | CROSSROADS

DATE: January 30, 2024
TO: Kevin Tsang, County of Riverside
FROM: Charlene So, Urban Crossroads
JOB NO: 15749-02 TA Scope



THRIFTY OIL WAREHOUSE (PPT230048, PDA8407, OAPL2300972) TRAFFIC STUDY SCOPING AGREEMENT

The firm of Urban Crossroads, Inc. is pleased to submit this scoping letter regarding the traffic analysis for Thrifty Oil Warehouse development (**Project**), which is located on the southeast corner of Tobacco Road and Placentia Avenue at 23641 Placentia Avenue in the County of Riverside (**County**) (Assessor's Parcel Number (**APN**) 317-260-017 & -018). This letter describes the proposed Project trip generation, trip distribution, and analysis methodology, which have been used to establish the draft proposed Project study area and analysis locations. The following scope of work is based on the County of Riverside's Transportation Analysis Guidelines for Level of Service and Vehicle Miles Traveled (dated December 2020) (**County Guidelines**).

PROPOSED PROJECT

The proposed Project includes the development of a 186,695 square foot warehouse building with 171,695 square feet of warehousing use and 15,000 square feet of office space (7,500 square feet on first and second floors). The preliminary site plan for the proposed Project is shown on Exhibit 1. Access to the site would be accommodated via two full access driveways located on Tobacco Road and a full access driveway on Placentia Avenue (e.g., no turn restrictions). Trucks would have access via the Placentia Avenue driveway and the southerly driveway on Tobacco Road and passenger car traffic would have access to all three driveways. Truck traffic to and from the site occurs along Placentia Avenue between the Project and the I-215 Freeway interchange at Placentia Avenue. The Project's anticipated opening year is 2026.

EXHIBIT 1: PRELIMINARY SITE PLAN

TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development.

In order to develop the traffic characteristics of the proposed Project, trip-generation statistics published in the Institute of Transportation Engineers (**ITE**) Trip Generation Manual (11th Edition, 2021) was used to estimate the trip generation. For purposes of this analysis, the following land use code and vehicle mix has been utilized:

- Warehousing – ITE Land Use Code 150 has been used to derive site specific trip generation estimates for the proposed Project. The vehicle mix has also been obtained from the ITE's latest Trip Generation Manual. The truck percentages were further broken down by axle type per the following South Coast Air Quality Management District (SCAQMD) recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

As noted in Table 1, refinements to the raw trip generation estimates have been made to provide a more detailed breakdown of trips between passenger cars and trucks. Trip generation for heavy trucks was further broken down by truck type (or axle type). The total truck percentage is comprised of 3 different truck types: 2-axle, 3-axle, and 4+-axle trucks. Passenger Car Equivalent (**PCE**) factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in City's Guidelines.

TABLE 1: TRIP GENERATION RATES

Land Use[1]	Units[2]	ITE LU Code	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily

[2] TSF = thousand square feet

[3] Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.
Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

The Project is estimated to generate a total of 322 two-way trips per day on a typical weekday with approximately 30 AM peak hour trips and 35 PM peak hour as shown in Table 2 (actual vehicles). Consistent with the County Guidelines, the PCE values shown in Table 2 will be utilized for the purposes of determining if the Project requires peak hour intersection operations analyses. The Project is estimated to generate a total of 492 two-way PCE trips per day on a typical weekday with approximately 38 PCE AM peak hour trips and 43 PCE PM peak hour as shown in Table 2.

TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. In addition, truck routes for neighboring agencies have been taken into consideration in the development of the trip distribution patterns for heavy trucks.

Exhibit 2 shows the Project truck trip distribution patterns while Exhibit 3 shows the Project passenger car trip distribution patterns. Per the County's comments, the truck trip distribution patterns assume Project trucks would utilize Placentia Avenue to access the I-215 Freeway.

STUDY AREA

Exhibit 3 provides the study area for the proposed Project, which consists of Tobacco Road & Placentia Avenue, plus the proposed Project driveways. The study area has been determined by comments provided by the County.

ANALYSIS SCENARIOS

Consistent with the County's Guidelines, intersection analysis will be provided for the following analysis scenarios:

- Existing (2024) Conditions
- Existing plus Ambient Growth plus Project (EAP) (2026) Conditions

All study area intersections will be evaluated using the Highway Capacity Manual (HCM) 6th Edition analysis methodology.

EXHIBIT 2: PROJECT (TRUCK) TRIP DISTRIBUTION

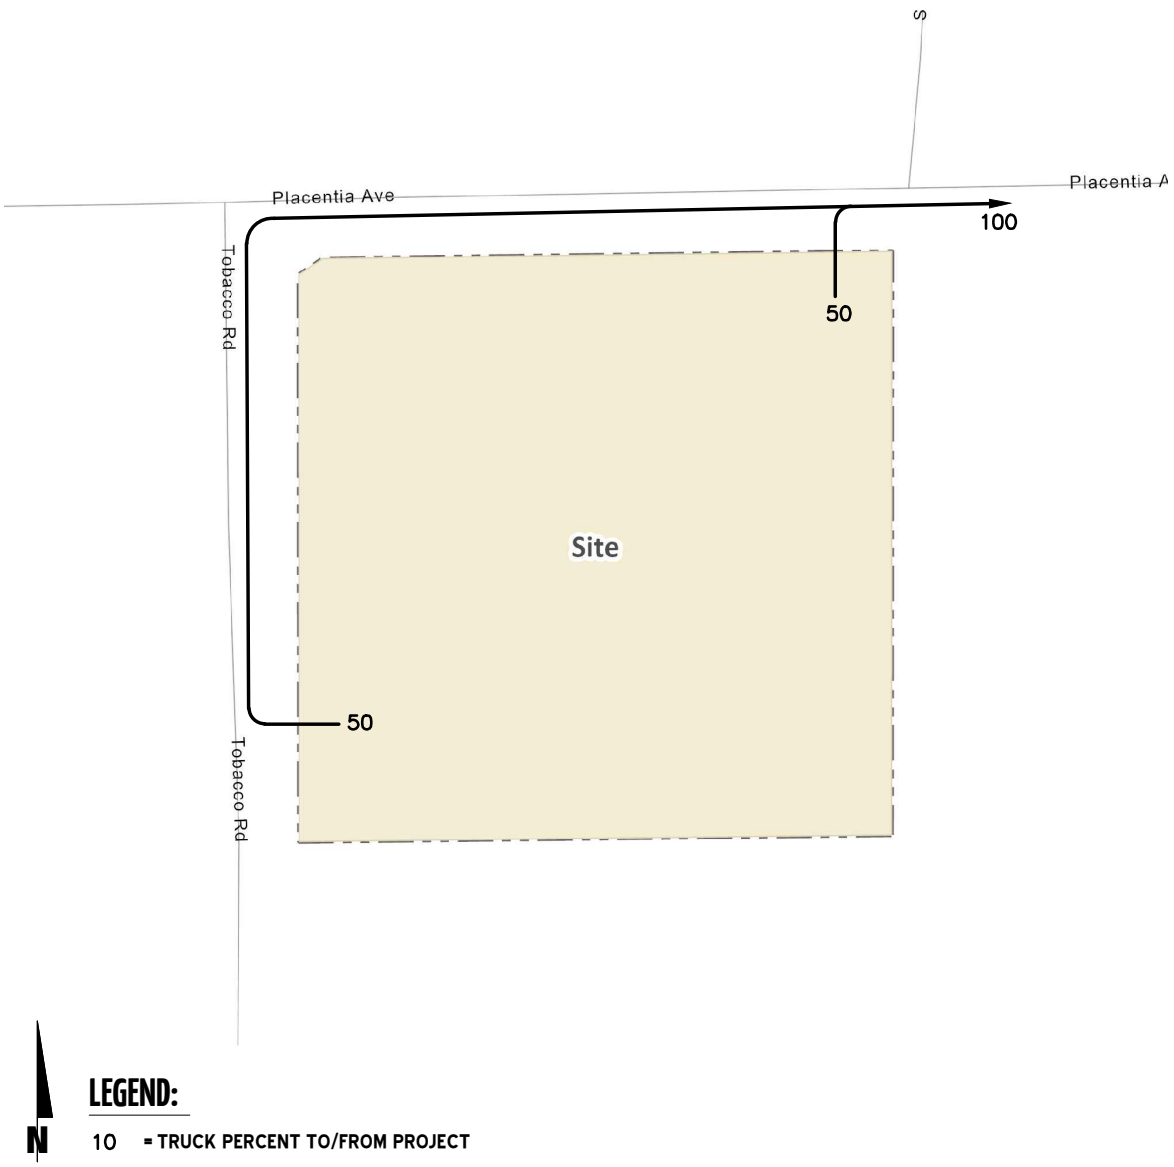

EXHIBIT 3: PROJECT (PASSENGER CAR) TRIP DISTRIBUTION

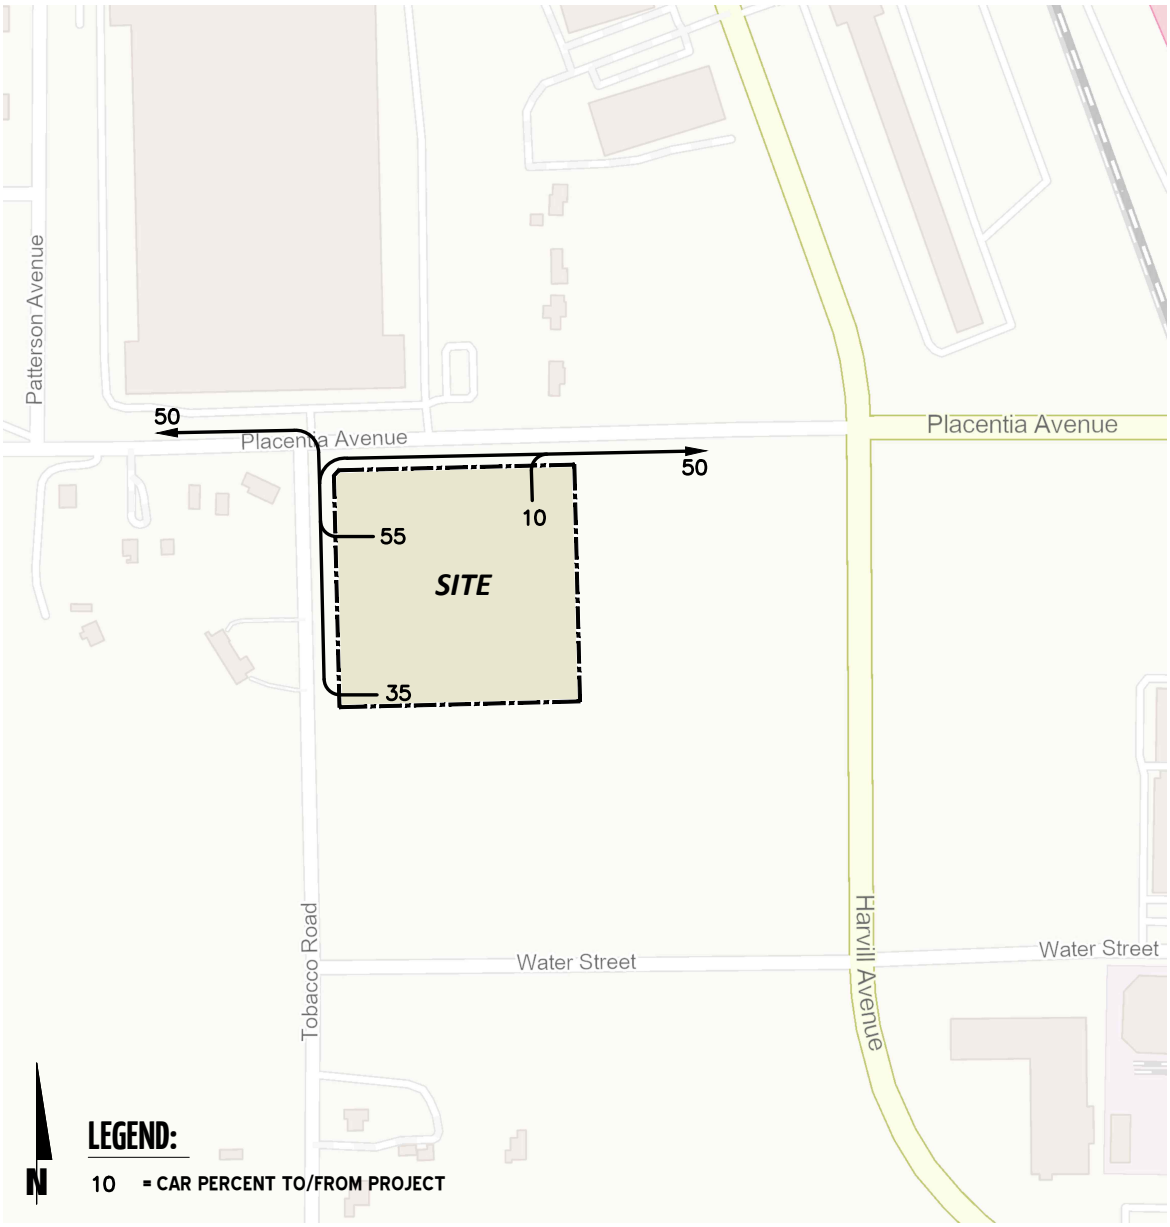

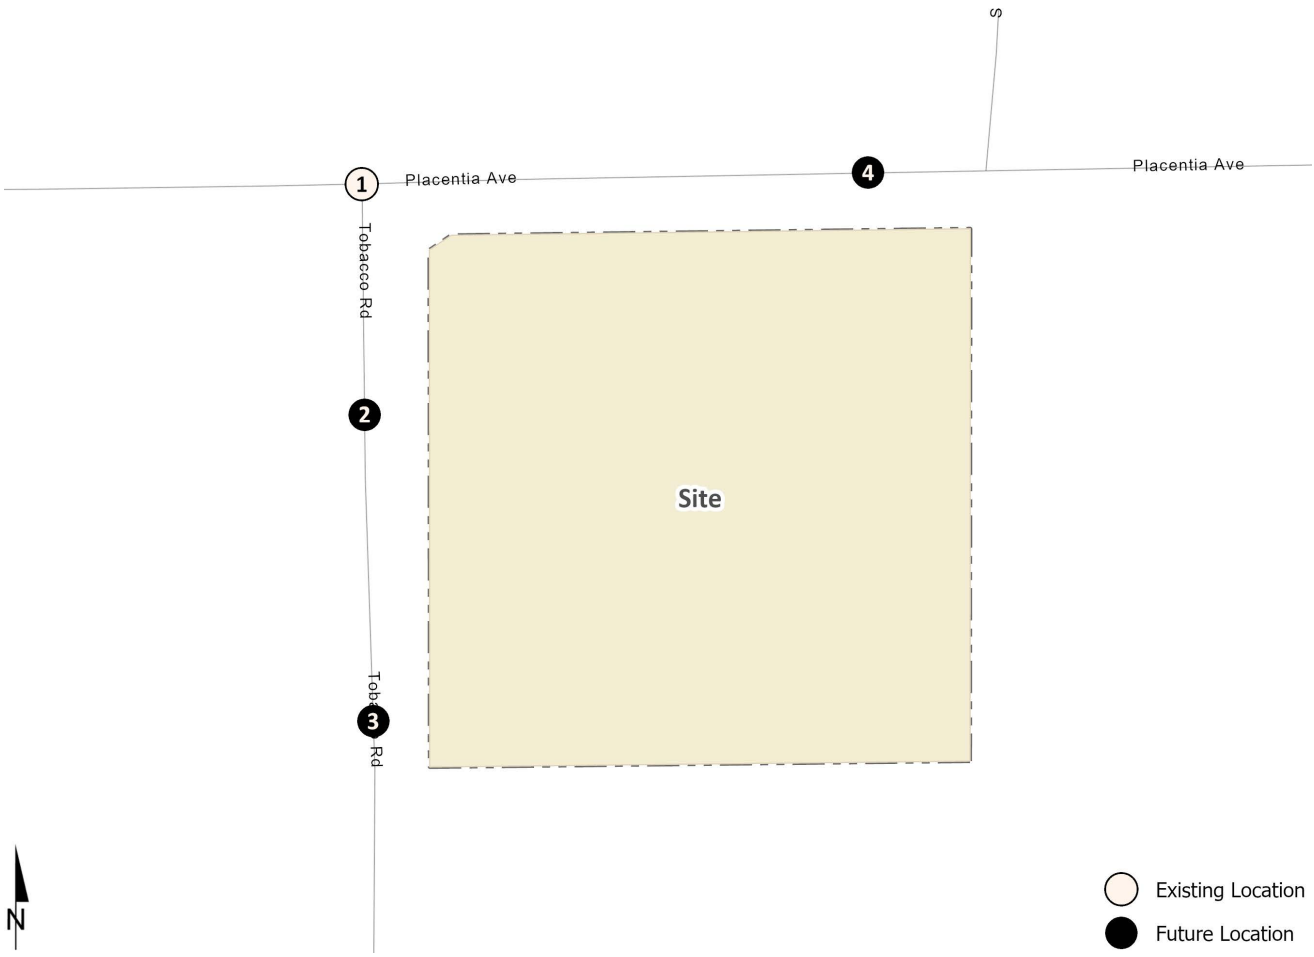

EXHIBIT 4: STUDY AREA

EXISTING COUNT DATA

Traffic counts for the existing study area intersection of Tobacco Road & Placentia Avenue were conducted on January 11, 2024, which was a typical weekday when local schools were open and operating on normal bell schedules. No additional adjustments are proposed for the purpose of establishing the existing baseline conditions. The traffic counts were collected for the following peak hours:

- Weekday AM Peak Hour (7:00-9:00 AM)
- Weekday PM Peak Hour (4:00-6:00 PM)

AMBIENT GROWTH

An ambient growth rate of 2% per year is proposed for the study area intersection to approximate background growth not identified by nearby cumulative development projects. As such, a total of 4.04% will be applied to the baseline (2% per year, compounded over 2 years).

SPECIAL ISSUES

The following special issues will also be addressed:

- VMT analysis will be evaluated in a separate document.
- Conduct traffic signal warrant analysis for all existing and future unsignalized study area intersections, which also includes all Project driveways proposed to have full access. 24-hour counts will be collected for intersections that meet peak hour warrants in order to conduct CA MUTCD Warrants 1 and 2.
- Conduct a queuing analysis of the Project driveways and the intersection of Tobacco Road & Placentia Avenue.
- Prepare truck turns at the applicable Project driveways. Truck turn templates for the site access driveways will be based on the WB-67 truck template. Pursuant to discussions with County staff, the southerly driveway to the Project on Tobacco Road will evaluate a shared driveway with the southerly property.
- Evaluate sight distance at the Project driveways and the intersection of Tobacco Road & Placentia Avenue. The sight distance analysis will be provided under a separate cover.

If you have any questions or comments, I can be reached at cso@urbanxroads.com.

EXHIBIT B

SCOPING AGREEMENT FOR TRAFFIC IMPACT STUDY

This letter acknowledges the Riverside County Transportation Department requirements for traffic impact analysis of the following project. The analysis must follow the Riverside County Transportation Department Traffic Study Guidelines dated December 2020.

Case No. PPT230048, PDA8407, OAPL2300972
Related Cases-
SP No.
EIR No.
GPA No.
CZ No.
Project Name: Thrifty Oil Warehouse
Project Address: southeast corner of Tobacco and Placentia (APN 317-260-017 & 317-260-018) - 23641 Placentia
Project Description: 186.695 square foot warehouse

	Consultant	Developer Representative

10.		20.	

E. Study Roadway Segments: *(NOTE: Subject to revision after other projects, trip generation and distribution are determined, or comments form other agencies).*

1.	Not applicable	2.	

F. Other Jurisdictional Impacts

Is this project within a City's Sphere of influence or one mile radius of City boundaries? ■ Yes ☐ No

If so, name of City jurisdiction: Caltrans - I-215 Freeway; City of Perris

G. Site Plan (please attach reduced copy)

H. Specific issues to be addressed in the Study (in addition to the standard analysis described in the Guideline) (To be filled out by Transportation Department)
(NOTE: If the traffic study states that "a traffic signal is warranted" (or "a traffic signal appears to be warranted", or similar statement) at an existing unsignalized intersection under existing conditions, 8-hour approach traffic volume information must be submitted in addition to the peak hourly turning movement counts for that intersection.

I. Existing Conditions
Traffic count data must be new or recent. Provide traffic count dates if using other than new counts.
Date of counts: Thursday, January 11, 2024

***NOTE* Traffic Study Submittal Form and appropriate fee must be submitted with, or prior to submittal of this form. Transportation Department staff will not process the Scoping Agreement prior to receipt of the fee.**

Planning Director

February 24, 2025

RE: AB 52 Consultation Conclusion Letter for GPA230008, PPT230048

Dear Ms. Brierty,

An AB 52 notification for this project was sent to you via email on January 08, 2024. The Riverside County Planning Department ("Planning") received your request dated February 07, 2024, on behalf of the Morongo Band of Mission Indians for AB 52 consultation on the Project. On February 07, 2024, the Planning Department provided the following project information via email to you: "*A Phase I Cultural Resources Study for the Thrifty Oil Warehouse Project*", and the project conditions of approval. Several follow-up communications were sent to Morongo, the latest on February 04, 2025, and February 10, 2025. There were no responses to any of these communications.

At this time, Planning has not received any further communication or information from Morongo regarding this project. Planning welcomes input from Morongo regarding this Project, however, based on the information gathered by Planning and the information provided by you to date, Planning has concluded that there is no potential significant impact to Tribal Cultural Resources as defined in Section 21074 of the Public Resources Code because there are no physical Tribal Cultural Resources present.

Based on the above, and in accordance with Public Resource Code section 21080.3.2(b), Planning has acted in good faith and made reasonable efforts to consult with Morongo and considers AB 52 consultation concluded as of this letter's date. The final project conditions of approval are attached to this emailed letter. Planning will notify Morongo when the Project's environmental document is released for the public review period as well as when the Project is scheduled for a public hearing.

Sincerely,

Heather Thomson
County Archaeologist

ADVISORY NOTIFICATION DOCUMENT

COUNTY OF RIVERSIDE
TRANSPORTATION AND LAND MANAGEMENT AGENCY

Charissa Leach, P.E.
Assistant CEO/TLMA Director

The following notifications are included as part of the recommendation of approval for PPT230048. They are intended to advise the applicant of various Federal, State and County regulations applicable to this entitlement and the subsequent development of the subject property.

Planning-CUL

Planning-CUL. 1 Human Remains

If human remains are found on this site, the developer/permit holder or any successor in interest shall comply with State Health and Safety Code Section 7050.5.

Planning-CUL. 2 PDA 8407 Accepted

County Archaeological Report (PDA) No. 8407 submitted for this project (PPT230048) was prepared by BFSA Environmental Services, a Perennial Company and is entitled: "A PHASE I CULTURAL RESOURCES STUDY FOR THE THRIFTY OIL WAREHOUSE PROJECT", dated January 16, 2024.
PDA concludes: The Phase I cultural resources assessment for the Thrifty Oil Warehouse Project did not identify any cultural resources. However, the property is located in proximity to multiple prehistoric and historic resources and has been impacted by agricultural use, partial development, and clearing. These impacts typically remove evidence of surface scatters of cultural artifacts.
Therefore, given the past impacts to the property coupled with the frequency of resources within the one mile, the obstructed ground visibility during the survey, and the noted historic occupation of the property, there still remains potential for the inadvertent discovery of archaeological resources during grading. As such, a cultural resources Mitigation Monitoring and Reporting
Program (MMRP) is recommended as a condition of approval for this property, which should include the monitoring of all ground-disturbing activities within the property by an archaeologist and Native American monitor.
PDA recommends: As a condition of project approval, a MMRP is recommended to identify any cultural resources that may be uncovered during grading and, subsequently, to mitigate potential impacts to any discovered archaeological resources evaluated as significant.
These documents are herein incorporated as a part of the record for project.

Planning-CUL. 3 Unanticipated Resources

ADVISORY NOTIFICATION DOCUMENT

The developer/permit holder or any successor in interest shall comply with the following for the life of this permit.

If during ground disturbance activities, unanticipated cultural resources* are discovered, the following procedures shall be followed:

All ground disturbance activities within 100 feet of the discovered cultural resource shall be halted and the applicant shall call the County Archaeologist immediately upon discovery of the cultural resource. A meeting shall be convened between the developer, the project archaeologist**, the Native American tribal representative (or other appropriate ethnic/cultural group representative), and the County Archaeologist to discuss the significance of the find. At the meeting with the aforementioned parties, a decision is to be made, with the concurrence of the County Archaeologist, as to the appropriate treatment (documentation, recovery, avoidance, etc.) for the cultural resource. Resource evaluations shall be limited to nondestructive analysis.

Further ground disturbance shall not resume within the area of the discovery until the appropriate treatment has been accomplished.

* A cultural resource site is defined, for this condition, as being a feature and/or three or more artifacts in close association with each other.

** If not already employed by the project developer, a County approved archaeologist shall be employed by the project developer to assess the significance of the cultural resource, attend the meeting described above, and continue monitoring of all future site grading activities as necessary.

Plan: PPT230048 Parcel: 317260017

60. Prior To Grading Permit Issuance

Planning-CUL

060 - Planning-CUL. 1 ECS sheet (cultural) Not Satisfied

Prior to issuance of grading permits: the developer/ applicant shall provide evidence to the Riverside County Planning Department that an Environmental Constraints Sheet has been included in the Grading Plans. This sheet shall indicate an area that will be used, if needed, for reburial of any artifacts that have been identified during grading and cannot be avoided. This area will be protected and not disturbed in the future. This is confidential information and the exact nature of this area will not be called out on the grading plans.

060 - Planning-CUL. 2 Native American Monitor Not Satisfied

Prior to the issuance of grading permits, the developer/permit applicant shall enter into an agreement with the consulting tribe(s) for a Native American Monitor.
The Native American Monitor(s) shall be on-site during all initial ground disturbing activities and excavation of each portion of the project site including clearing, grubbing, tree removals, grading and trenching. In conjunction with the Archaeological Monitor(s), the Native American Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources.
The developer/permit applicant shall submit a fully executed copy of the agreement to the County Archaeologist to ensure compliance with this condition of approval. Upon verification, the Archaeologist shall clear this condition.
This agreement shall not modify any condition of approval or mitigation measure.

060 - Planning-CUL. 3 Project Archaeologist Not Satisfied

Prior to issuance of grading permits: The applicant/developer shall provide evidence to the County of Riverside Planning Department that a County certified professional archaeologist (Project Archaeologist) has been contracted to implement a Cultural Resource Monitoring Program (CRMP). A Cultural Resource Monitoring Plan shall be developed that addresses the details of all activities and provides procedures that must be followed in order to reduce the impacts to cultural and historic resources to a level that is less than significant as well as address potential impacts to undiscovered buried archaeological resources associated with this project. A fully executed copy of the contract and a wet-signed copy of the Monitoring Plan shall be provided to the County Archaeologist to ensure compliance with this condition of approval.
Working directly under the Project Archaeologist, an adequate number of qualified Archaeological Monitors shall be present to ensure that all earth moving activities are observed and shall be on-site during all grading activities for areas to be monitored including off-site improvements. Inspections will vary based on the rate of excavation, the materials excavated, and the presence and abundance of artifacts and features. The frequency and location of inspections will be determined by the Project Archaeologist.

70. Prior To Grading Final Inspection

Planning-CUL

070 - Planning-CUL. 1 Artifact Disposition Not Satisfied

Prior to Grading Permit Final Inspection, the landowner(s) shall relinquish ownership of all cultural resources that are unearthed on the Project property during any ground-disturbing activities, including previous investigations and/or Phase III data recovery.
Historic Resources- all historic archaeological materials recovered during the archaeological investigations (this includes collections made during an earlier project, such as testing of

Plan: PPT230048 Parcel: 317260017

70. Prior To Grading Final Inspection

Planning-CUL

070 - Planning-CUL. 1 Artifact Disposition (cont.) Not Satisfied

archaeological sites that took place years ago), shall be curated at the Western Science Center, a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines

Prehistoric Resources- One of the following treatments shall be applied.

a. Reburial of the resources on the Project property. The measures for reburial shall include, at least, the following: Measures to protect the reburial area from any future impacts. Reburial shall not occur until all required cataloguing, analysis and studies have been completed on the cultural resources, with an exception that sacred items, burial goods and Native American human remains are excluded. Any reburial processes shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV Report. The Phase IV Report shall be filed with the County under a confidential cover and not subject to a Public Records Request.

b. If reburial is not agreed upon by the Consulting Tribes then the resources shall be curated at a culturally appropriate manner at the Western Science Center, a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the landowner to the County. There shall be no destructive or invasive testing on sacred items, burial goods and Native American human remains.

070 - Planning-CUL. 2 Phase IV Monitoring Report Not Satisfied

Prior to Grading Permit Final Inspection, a Phase IV Cultural Resources Monitoring Report shall be submitted that complies with the Riverside County Planning Department's requirements for such reports for all ground disturbing activities associated with this grading permit. The report shall follow the County of Riverside Planning Department Cultural Resources (Archaeological) Investigations Standard Scopes of Work posted on the TLMA website. The report shall include results of any feature relocation or residue analysis required as well as evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting and evidence that any artifacts have been treated in accordance to procedures stipulated in the Cultural Resources Management Plan.

RIVERSIDE COUNTY
PLANNING DEPARTMENT

John Hildebrand
Planning Director

February 06, 2025

RE: AB 52 Consultation Conclusion Letter for GPA230008, PPT230048

Dear Mr. Ontiveros,

An AB 52 notification for this project was sent to you via email on January 08, 2024. The Riverside County Planning Department ("Planning") received your request on behalf of the Soboba Band of Luiseno Indians for AB 52 consultation on the Project. On February 08, 2024, the Planning Department provided the following project information via email to you: "*A Phase I Cultural Resources Study for the Thrifty Oil Warehouse Project*". Also attached to this communication were the project conditions of approval and the Advisory Notification Document. Meetings were held on February 14, 2024, April 03, 2024, and January 22, 2025, in which this project was discussed. Soboba told Planning that the project was situated within the boundaries of a Tribal Cultural Resource, CA-RIV-13300, or the *Q'axall'pah* cultural landscape. Soboba also provided specific information regarding the components of the landscape. Soboba provided TCR mitigation measure recommendations to mitigate impacts to the TCR landscape, which Planning agreed to. These included the following:

MM-TCR-01: Human Remains If human remains are found on this site, the developer/permit holder or any successor in interest shall comply with State Health and Safety Code Section 7050.5. Pursuant to State Health and Safety Code Section 7050.5, if human remains are encountered, no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to Public Resources Code Section 5097.98 (b), remains shall be left in place and free from disturbance until a final decision as to the treatment and their disposition has been made. If the Riverside County Coroner determines the remains to be Native American, the Native American Heritage Commission shall be contacted by the Coroner within the period specified by law (24 hours). Subsequently, the Native American Heritage Commission shall identify the "Most Likely Descendant". The Most Likely Descendant shall then make recommendations and engage in consultation with the

property owner concerning the treatment of the remains as provided in Public Resources Code Section 5097.98.

MM-TCR-02: Unanticipated Resource The developer/permit holder or any successor in interest shall comply with the following for the life of this permit. If during ground disturbance activities, unanticipated cultural resources* are discovered, the following procedures shall be followed:
• All ground disturbance activities within 100 feet of the discovered cultural resource shall be halted and the applicant shall call the Riverside County Planning Department, County Archaeologist immediately upon discovery of the cultural resource.
• A meeting shall be convened between the developer, the project archaeologist**, the Native American tribal representative(s) (or other appropriate ethnic/cultural group representative), the County Archaeologist or appropriate representative from the Riverside County Planning Department to discuss the significance of the find. At the meeting with the aforementioned parties, a decision is to be made, with the concurrence of the County Archaeologist or appropriate representative from the Riverside County Planning Department, as to the appropriate treatment (avoidance, documentation, recovery, etc.) for the Tribal Cultural Resource. All proposed evaluations shall be limited to nondestructive analysis, and subject to approval by the consulting tribe(s).
• Further ground disturbance shall not resume within the area of the discovery until the appropriate treatment has been accomplished.

MM-TCR-03: Native American Monitor Prior to the issuance of grading permits, the developer/permit applicant shall enter into agreement(s) with the consulting tribe(s) for the appropriate number of Native American Monitor(s). In conjunction with the Archaeological Monitor(s), the Native American Monitor(s) shall attend the pre-grading meeting with the contractors to provide Cultural Sensitivity Training for all construction personnel. In addition, an adequate number of Native American Monitor(s) shall be on-site during all initial ground disturbing activities and excavation of soils in each portion of the project site including clearing, grubbing, tree removals, grading and trenching. In conjunction with the Archaeological Monitor(s), the Native American Monitor(s) have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of Tribal Cultural Resources. Activities will be documented in Tribal Monitoring Notes which will be provided to the applicant on a regular basis and required to be submitted as part of the Phase IV Report to

the County Archaeologist prior to grading final inspection. The developer/permit applicant shall submit a fully executed copy of the agreement(s) to the County Archaeologist or appropriate representative form Riverside County Planning Department to ensure compliance with this mitigation measure and associated condition of approval. Upon verification, the Archaeologist shall clear this condition. This agreement shall not modify any condition of approval or mitigation measure.

Based on the above, and in accordance with Public Resource Code section 21080.3.2(b), Planning has acted in good faith and made reasonable efforts to consult with Soboba on this project and considers AB 52 consultation concluded as of this letter's date. Planning will notify Soboba when the Project's environmental document is released for the public review period as well as when the Project is scheduled for a public hearing.

Sincerely,

Heather Thomson
County Archaeologist

ADVISORY NOTIFICATION DOCUMENT

COUNTY OF RIVERSIDE
TRANSPORTATION AND LAND MANAGEMENT AGENCY

Charissa Leach, P.E.
Assistant CEO/TLMA Director

The following notifications are included as part of the recommendation of approval for PPT230048. They are intended to advise the applicant of various Federal, State and County regulations applicable to this entitlement and the subsequent development of the subject property.

Planning-CUL

Planning-CUL. 1 Human Remains

If human remains are found on this site, the developer/permit holder or any successor in interest shall comply with State Health and Safety Code Section 7050.5.

Planning-CUL. 2 PDA 8407 Accepted

County Archaeological Report (PDA) No. 8407 submitted for this project (PPT230048) was prepared by BFSA Environmental Services, a Perennial Company and is entitled: "A PHASE I CULTURAL RESOURCES STUDY FOR THE THRIFTY OIL WAREHOUSE PROJECT", dated January 16, 2024.
PDA concludes: The Phase I cultural resources assessment for the Thrifty Oil Warehouse Project did not identify any cultural resources. However, the property is located in proximity to multiple prehistoric and historic resources and has been impacted by agricultural use, partial development, and clearing. These impacts typically remove evidence of surface scatters of cultural artifacts.
Therefore, given the past impacts to the property coupled with the frequency of resources within the one mile, the obstructed ground visibility during the survey, and the noted historic occupation of the property, there still remains potential for the inadvertent discovery of archaeological resources during grading. As such, a cultural resources Mitigation Monitoring and Reporting
Program (MMRP) is recommended as a condition of approval for this property, which should include the monitoring of all ground-disturbing activities within the property by an archaeologist and Native American monitor.
PDA recommends: As a condition of project approval, a MMRP is recommended to identify any cultural resources that may be uncovered during grading and, subsequently, to mitigate potential impacts to any discovered archaeological resources evaluated as significant.
These documents are herein incorporated as a part of the record for project.

Planning-CUL. 3 Unanticipated Resources

ADVISORY NOTIFICATION DOCUMENT

The developer/permit holder or any successor in interest shall comply with the following for the life of this permit.

If during ground disturbance activities, unanticipated cultural resources* are discovered, the following procedures shall be followed:

All ground disturbance activities within 100 feet of the discovered cultural resource shall be halted and the applicant shall call the County Archaeologist immediately upon discovery of the cultural resource. A meeting shall be convened between the developer, the project archaeologist**, the Native American tribal representative (or other appropriate ethnic/cultural group representative), and the County Archaeologist to discuss the significance of the find. At the meeting with the aforementioned parties, a decision is to be made, with the concurrence of the County Archaeologist, as to the appropriate treatment (documentation, recovery, avoidance, etc.) for the cultural resource. Resource evaluations shall be limited to nondestructive analysis.

Further ground disturbance shall not resume within the area of the discovery until the appropriate treatment has been accomplished.

* A cultural resource site is defined, for this condition, as being a feature and/or three or more artifacts in close association with each other.

** If not already employed by the project developer, a County approved archaeologist shall be employed by the project developer to assess the significance of the cultural resource, attend the meeting described above, and continue monitoring of all future site grading activities as necessary.

Plan: PPT230048 Parcel: 317260017

60. Prior To Grading Permit Issuance

Planning-CUL

060 - Planning-CUL. 1 ECS sheet (cultural) Not Satisfied

Prior to issuance of grading permits: the developer/ applicant shall provide evidence to the Riverside County Planning Department that an Environmental Constraints Sheet has been included in the Grading Plans. This sheet shall indicate an area that will be used, if needed, for reburial of any artifacts that have been identified during grading and cannot be avoided. This area will be protected and not disturbed in the future. This is confidential information and the exact nature of this area will not be called out on the grading plans.

060 - Planning-CUL. 2 Native American Monitor Not Satisfied

Prior to the issuance of grading permits, the developer/permit applicant shall enter into an agreement with the consulting tribe(s) for a Native American Monitor.
The Native American Monitor(s) shall be on-site during all initial ground disturbing activities and excavation of each portion of the project site including clearing, grubbing, tree removals, grading and trenching. In conjunction with the Archaeological Monitor(s), the Native American Monitor(s) shall have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources.
The developer/permit applicant shall submit a fully executed copy of the agreement to the County Archaeologist to ensure compliance with this condition of approval. Upon verification, the Archaeologist shall clear this condition.
This agreement shall not modify any condition of approval or mitigation measure.

060 - Planning-CUL. 3 Project Archaeologist Not Satisfied

Prior to issuance of grading permits: The applicant/developer shall provide evidence to the County of Riverside Planning Department that a County certified professional archaeologist (Project Archaeologist) has been contracted to implement a Cultural Resource Monitoring Program (CRMP). A Cultural Resource Monitoring Plan shall be developed that addresses the details of all activities and provides procedures that must be followed in order to reduce the impacts to cultural and historic resources to a level that is less than significant as well as address potential impacts to undiscovered buried archaeological resources associated with this project. A fully executed copy of the contract and a wet-signed copy of the Monitoring Plan shall be provided to the County Archaeologist to ensure compliance with this condition of approval.
Working directly under the Project Archaeologist, an adequate number of qualified Archaeological Monitors shall be present to ensure that all earth moving activities are observed and shall be on-site during all grading activities for areas to be monitored including off-site improvements. Inspections will vary based on the rate of excavation, the materials excavated, and the presence and abundance of artifacts and features. The frequency and location of inspections will be determined by the Project Archaeologist.

70. Prior To Grading Final Inspection

Planning-CUL

070 - Planning-CUL. 1 Artifact Disposition Not Satisfied

Prior to Grading Permit Final Inspection, the landowner(s) shall relinquish ownership of all cultural resources that are unearthed on the Project property during any ground-disturbing activities, including previous investigations and/or Phase III data recovery.
Historic Resources- all historic archaeological materials recovered during the archaeological investigations (this includes collections made during an earlier project, such as testing of

Plan: PPT230048 Parcel: 317260017

70. Prior To Grading Final Inspection

Planning-CUL

070 - Planning-CUL. 1 Artifact Disposition (cont.) Not Satisfied

archaeological sites that took place years ago), shall be curated at the Western Science Center, a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines

Prehistoric Resources- One of the following treatments shall be applied.

a. Reburial of the resources on the Project property. The measures for reburial shall include, at least, the following: Measures to protect the reburial area from any future impacts. Reburial shall not occur until all required cataloguing, analysis and studies have been completed on the cultural resources, with an exception that sacred items, burial goods and Native American human remains are excluded. Any reburial processes shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV Report. The Phase IV Report shall be filed with the County under a confidential cover and not subject to a Public Records Request.

b. If reburial is not agreed upon by the Consulting Tribes then the resources shall be curated at a culturally appropriate manner at the Western Science Center, a Riverside County curation facility that meets State Resources Department Office of Historic Preservation Guidelines for the Curation of Archaeological Resources ensuring access and use pursuant to the Guidelines. The collection and associated records shall be transferred, including title, and are to be accompanied by payment of the fees necessary for permanent curation. Evidence of curation in the form of a letter from the curation facility stating that subject archaeological materials have been received and that all fees have been paid, shall be provided by the landowner to the County. There shall be no destructive or invasive testing on sacred items, burial goods and Native American human remains.

070 - Planning-CUL. 2 Phase IV Monitoring Report Not Satisfied

Prior to Grading Permit Final Inspection, a Phase IV Cultural Resources Monitoring Report shall be submitted that complies with the Riverside County Planning Department's requirements for such reports for all ground disturbing activities associated with this grading permit. The report shall follow the County of Riverside Planning Department Cultural Resources (Archaeological) Investigations Standard Scopes of Work posted on the TLMA website. The report shall include results of any feature relocation or residue analysis required as well as evidence of the required cultural sensitivity training for the construction staff held during the required pre-grade meeting and evidence that any artifacts have been treated in accordance to procedures stipulated in the Cultural Resources Management Plan.

COUNTY OF RIVERSIDE
TRANSPORTATION AND LAND MANAGEMENT AGENCY
Rania Odenbaugh, MBA., MPM.
TLMA Agency Director

06/17/25, 2:55 pm **PPT230048**

ADVISORY NOTIFICATION DOCUMENT

The following notifications are included as part of the recommendation of approval for PPT230048. They are intended to advise the applicant of various Federal, State and County regulations applicable to this entitlement and the subsequent development of the subject property.

Advisory Notification

Advisory Notification. 1 AND - Preamble

This Advisory Notification Document is included as part of the justification for the recommendation of approval of General Plan Amendment No. 230008 (GPA230008), Change of Zone No. 2300030 (CZ2300030), and Plot Plan No. 230048 (PPT230048) and is intended to advise the applicant of various Federal, State and County regulations applicable to this entitlement and the subsequent development of the subject property in accordance with approval of that entitlement and are in addition to the applied conditions of approval.

Advisory Notification. 2 AND - Project Description & Operational Limits

Plot Plan (PPT) No. 230048 proposes to construct a 185,912 square foot (SF) concrete tilt up, non-refrigerated warehouse on 9.62 acres of vacant land designated as APN:317 260 017 and 317 260 018. The proposed Project would include one 176,912 SF warehouse with 23 dock doors and two 4,500 SF office spaces with mezzanines for a total square footage of 185,912 SF, with related landscaping, drainage basin, and parking. The Project site will be accessed via a shared driveway on Tobacco Avenue, will include 33 truck trailer parking spaces, and 126 parking spaces. The Project also includes dedication of approximately 0.90 acres for public right of way improvements to be built along Tobacco Road and Placentia Avenue, including a “multipurpose trail,” and off site utility improvements.

General Plan Amendment (GPA) No. 230008 is a proposal to change the General Plan Foundation Component and Land Use designation for two lots from Rural Community-Very Low Density Residential (RC-VLDR) to Community Development – Business Park (CD-BP).

Change of Zone (CZ) No. 2300030 is a proposal to change the zoning classification from and Rural Residential (R-R-1) to Industrial Park (I-P).

Advisory Notification. 3 AND - Design Guidelines

Compliance with applicable Design Guidelines:
1. County Wide Design Guidelines and Standards

Advisory Notification. 4 AND - Exhibits

The development of the premises shall conform substantially with that as shown on APPROVED EXHIBIT(S)

Exhibit A (Site Plan), dated 06/25/2025

Advisory Notification. 5 AND - Federal, State & Local Regulation Compliance

1. Compliance with applicable Federal Regulations, including, but not limited to:
   - National Pollutant Discharge Elimination System (NPDES)
     - Clean Water Act
     - Migratory Bird Treaty Act (MBTA)

2. Compliance with applicable State Regulations, including, but not limited to:
   - The current Water Quality Management Plan (WQMP) Permit issued by the applicable Regional Water Quality Control Board (RWQCB.)
   - Government Code Section 66020 (90 Days to Protest)
   - Government Code Section 66499.37 (Hold Harmless)
   - Native American Cultural Resources, and Human Remains (Inadvertent Find)
   - School District Impact Compliance
   - Current California Building Code (CBC)
   - Current California Fire Code Requirements
   - Public Resources Code Section 5097.94 & Sections 21073 et al - AB 52 (Native Americans: CEQA)

3. Compliance with applicable County Regulations, including, but not limited to:
   - Ord. No. 348 (Land Use Planning and Zoning Regulations)
   - Ord. No. 413 (Regulating Vehicle Parking)
   - Ord. No. 457 (Building Requirements)
   - Ord. No. 458 (Regulating Flood Hazard Areas & Implementing National Flood Insurance Program)
   - Ord. No. 460 (Division of Land)
   - Ord. No. 461 (Road Improvement Standards)
   - Ord. No. 484 (Control of Blowing Sand)
   - Ord. No. 655 (Regulating Light Pollution)
   - Ord. No. 671 (Consolidated Fees)
   - Ord. No. 787 (Fire Code)
   - Ord. No. 847 (Regulating Noise)
   - Ord. No. 857 (Business Licensing)
   - Ord. No. 859 (Water Efficient Landscape Requirements)
   - Ord. No. 915 (Regulating Outdoor Lighting)

4. Mitigation Fee Ordinances
   - Ord. No. 659 Development Impact Fees (DIF)
   - Ord. No. 663 Stephens Kangaroo Rat Habitat Conservation Plan (SKR)
   - Ord. No. 810 Western Riverside County Multiple Species Habitat Conservation Plan (WRCMSHCP)
   - Ord. No. 824 Western Riverside County Transportation Uniform Mitigation Fee (WR TUMF)

Advisory Notification. 6 AND - Graffiti Abatement

Any graffiti painted or marked upon the premises or on any adjacent area under the control of the Project shall be removed and/or abated within 24 hours.

Advisory Notification. 7 AND - Hold Harmless

The applicant/permittee or any successor in interest shall defend, indemnify, and hold harmless the County of Riverside or its agents, officers, and employees (COUNTY) from the following:

(a) any claim, action, or proceeding against the COUNTY to attack, set aside, void, or annul an approval of the COUNTY, its advisory agencies, appeal boards, or legislative body concerning PPT230048 or its associated environmental documentation; and,

(b) any claim, action or proceeding against the COUNTY to attack, set aside, void or annul any other decision made by the COUNTY concerning PPT230048 including, but not limited to, decisions made in response to California Public Records Act requests; and

(a) and (b) above are hereinafter collectively referred to as "LITIGATION."

The COUNTY shall promptly notify the applicant/permittee of any LITIGATION and shall cooperate fully in the defense. If the COUNTY fails to promptly notify the applicant/permittee of any such LITIGATION or fails to cooperate fully in the defense, the applicant/permittee shall not, thereafter, be responsible to defend, indemnify or hold harmless the COUNTY.

The obligations imposed by this condition include, but are not limited to, the following: the applicant/permittee shall pay all legal services expenses the COUNTY incurs in connection with any such LITIGATION, whether it incurs such expenses directly, whether it is ordered by a court to pay such expenses, or whether it incurs such expenses by providing legal services through its Office of County Counsel.

Payment for COUNTY's costs related to the LITIGATION shall be made on a deposit basis. Within thirty (30) days of receipt of notice from COUNTY that LITIGATION has been initiated against the Project, applicant/permittee shall initially deposit with the COUNTY’s Planning Department the total amount of Twenty Thousand Dollars ($20,000). Applicant/permittee shall deposit with COUNTY such additional amounts as COUNTY reasonably and in good faith determines, from time to time, are necessary to cover costs and expenses incurred by the COUNTY, including but not limited to, the Office of County Counsel, Riverside County Planning Department and the Riverside County Clerk of the Board associated with the LITIGATION. To the extent such costs are not recoverable under the California Public Records Act from the records requestor, applicant/permittee agrees that deposits under this section may also be used to cover staff time incurred by the COUNTY to compile, review, and redact records in response to a Public Records

ADVISORY NOTIFICATION DOCUMENT

Advisory Notification

Advisory Notification. 7 AND - Hold Harmless (cont.)

Act request made by a petitioner in any legal challenge to the Project when the petitioner is using the Public Records Act request as a means of obtaining the administrative record for LITIGATION purposes. Within ten (10) days of written notice from COUNTY, applicant/permittee shall make such additional deposits.

Advisory Notification. 8 AND - Mitigation Measures

Mitigation Measures from the project's Initial Study-Mitigated Negative Declaration have been incorporated as conditions of approval of this project where appropriate. Beyond these conditions of approval that have been incorporated, development of the project shall conform to the analysis, conclusions, and mitigation measures of the project's Initial Study-Mitigated Negative Declaration.

BS-Plan Check

BS-Plan Check. 1 Gen - Custom

NOTIFICATIONS:
CODE/ORDINANCE REQUIREMENTS:
The applicant shall obtain the required building permit(s) from the building department prior to any construction on the property. All building plans and supporting documentation shall comply with current adopted California Building Codes, Riverside County Ordinances regulations in effect at the time of building plan submittal and fee payment to the Building Department. All Building Department plan submittal and fee requirements shall apply.
NOTE: The new updated 2022 California Building Codes will be in effect as of January 1st, 2023, as mandated by the state of California. Any building plan and fee payment submitted to the building department on or after January 1st, 2023, will be subject to the new updated California Building Code(s).
PERMIT ISSUANCE:
Per section 105.1 (2022 California Building Code, CBC): Where any owner or authorized agent intends to construct, enlarge, alter , repair, move, demolish or change the occupancy of a building or structure, or to erect, install, enlarge, alter, repair, remove, convert, or replace any electrical, gas, mechanical, or plumbing system, the regulation of which is governed by this code, or to cause any such work to be done, shall first make application to the building official and obtain the required permit.
The applicant shall obtain the required building permit(s) from the building department prior to any construction or placement of any building, structure or equipment on the property.
The applicant shall obtain an approved final building inspection and certificate of occupancy from the building department prior to any use or occupancy of the building, or structure.
At no time shall the approval of the planning case exhibit allow for the construction or use of any building, structure, or equipment. In residential applications, each separate structure will require a separate building permit.
LIQUEFACTION
If this project is in an area with potential for soil liquefaction, per Section CBC Section 1803.5, a geotechnical assessment of this condition is required and, according to Section 1803, the assessment must be conducted by a licensed design professional. If the assessment indicates that the condition, if not corrected, would lead to structural defects, the assessment shall recommend corrective action which is likely to prevent structural damage.
Note: Per Section 1803.2, this assessment does not necessarily have to take the form of a full Soil Report. It

ADVISORY NOTIFICATION DOCUMENT

BS-Plan Check

BS-Plan Check. 1 Gen - Custom (cont.)

can take the form of a letter stating that the design professional of record for this project has assessed the site and has either provided corrective actions or that the specific site conditions do not warrant corrective action."
Flood Zones
If this project is in an area designated as a flood zone, the applicant will be required to contact the flood department for potential additional requirements, prior to the acceptance of building permit application(s). Requirements may include but be limited to: Flood elevation, flow velocity, high flow depth, scour depth, elevated pad or finish floor heights, and anchoring foundation systems. Where the proposed project is to be located in a high flow area within the flood zone, S.P.A. foundation plans may not be applicable, and an engineered foundation design would be required. Design parameter's necessary for the foundation system will be provided by the Flood Control Dept. The Riverside County Flood Control Department can be contacted @ (951) 955-1200 for further information.
HIGH FIRE SEVERITY ZONE
If this project is in A high fire zone area, CRC 337 OR CBC 7A shall apply.

E Health

E Health. 1 DEH-ECP COMMENT

Based on the information provided in the environmental assessment documents submitted for this project and with the provision that the information was accurate and representative of site conditions, Riverside County Department of Environmental Health – Environmental Cleanup Program (RCDEH-ECP) concludes no further environmental assessment is required for this project.

If previously unidentified contamination or the presence of a naturally occurring hazardous material is discovered at the site, assessment, investigation, and/or cleanup may be required. Contact Riverside County Environmental Health - Environmental Cleanup Programs at (951) 955-8980, for further information.

Fire

Fire. 1 Adverse Impact Mitigation - DIF

The Riverside County Fire Department, Fire Planning Division reviews proposed development projects throughout the county and its partner cities. Our evaluation focuses on ensuring compliance with departmental standards, including response times, existing fire station locations, equipment availability, and the anticipated impact on service requests resulting from these proposed developments.

Our department provides cooperative integrated regional fire protection services throughout Riverside County and its partner cities. The three closest Riverside County Fire Department and partner city fire stations by response times are as follows:

Fire Station 90 – 333 Placentia Avenue, Perris; it is approximately 4.05 minutes away.
Fire Station 101 – 105 South F Street, Perris; it is approximately 5.25 minutes away.
Fire Station 59 – 21510 Pinewood Street, Perris; it is approximately 5.48 minutes away.

This project will contribute to a cumulative adverse impact on the fire department's ability to provide an

ADVISORY NOTIFICATION DOCUMENT

Fire

Fire. 1 Adverse Impact Mitigation - DIF (cont.)

acceptable level of service. These impacts include an increased number of emergency and public service calls due to the increased number of structures, traffic, and population. These stations are currently operating at or above their optimal capacity. Generally, a station can sustain a maximum of around 3000 calls for service per year. To mitigate these impacts, the project will be subject to Development Impact Fees in accordance with the County's fee schedule.

If we can be of further assistance, please feel free to contact the Riverside County Fire Department, Office of the Fire Marshal, Fire Planning Division at (951) 955-4777 or rvcplanningsubmittals@fire.ca.gov.

Fire. 2 General Fire Department Advisory Comments

With respect to the planning conditions for the referenced project, the fire department requires the following fire protection measures be provided in accordance with Riverside County Ordinances, the 2022 California Fire Code (CFC) as adopted and amended by the County of Riverside and/or recognized fire protection standards.

These conditions are preliminary and further review will be conducted upon receipt of additional entitlement and/or construction submittals. Additional requirements may be required based upon the adopted codes at the time of submittal.

1. Fire Protection Water Supplies/Fire Flow - Minimum fire flow for the construction of all buildings is required per CFC Appendix B. Prior to building permit issuance for new construction, the applicant shall provide documentation to show there exists a water system capable of delivering the required fire flow. Specific design features may increase or decrease the required fire flow. Reference CFC 507.3.

2. Fire Protection Water Supplies/Hydrants - The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with CFC Appendix C and NFPA 24. Fire hydrants shall be located no more than 400 feet from all portions of the exterior of the building along an approved route on a fire apparatus access road, unless otherwise approved by the Fire Department. Fire hydrants shall be at least 40 feet from the building it is serving. A fire hydrant shall be located within 20 to 100 feet of the fire department connection for buildings protected with a fire sprinkler system. The size and number of outlets required for the approved fire hydrants are 4” x 2 ½” x 2 ½” (super hydrant). Reference CFC 507.5, CFC Appendix C and NFPA 24.

3. Fire Department Access - Fire apparatus access roads shall be provided to within 150 feet of all exterior portions of buildings, unless otherwise approved by the Fire Department. Fire apparatus access roads shall have an unobstructed width of not less than 24 feet. Dead-end fire apparatus access roads in excess of 150 feet shall be provided with an approved turn around. The minimum required turning radius of a fire apparatus access road is 45 feet outside radius and 21 feet inside radius. The construction of the fire apparatus access roads shall be all weather and capable of sustaining 80,000 lbs. Unless otherwise approved, the grade of a fire apparatus access road shall not exceed 16 percent and the cross slope shall not exceed 2.5 percent. The angles of approach and departure for fire apparatus access roads shall be a maximum of 6 percent grade change for 25 feet of approach/departure. Reference CFC 503.1.1, 503.2.1 as amended by the County of Riverside and Riverside County Office of the Fire Marshal Guidelines.

4. Fire Department Access Turn Around - Dead-end fire apparatus access roads in excess of 150 feet in

ADVISORY NOTIFICATION DOCUMENT

Fire

Fire. 2 General Fire Department Advisory Comments (cont.)

length shall be provided with a bulb turnaround at the terminus measuring a minimum of 45 feet outside radius and 21 feet inside radius. Parallel parking around the perimeter of the bulb is acceptable provided the bulb outside turning radius is increased by 8 feet. In-lieu of a bulb, a hammer-head type turnaround is acceptable where the top of the "T" dimension is 120 feet with the stem in the center. Additional turnaround designs may be acceptable as approved by the Fire Department. Reference CFC 503.1.1, 503.2.1 as amended by the County of Riverside and Riverside County Office of the Fire Marshal Guidelines.

5. Secondary Access – Unless otherwise approved by the Fire Department, dead end fire apparatus access roads shall not exceed (660 feet for Very High Fire Hazard Severity Zone and High Fire Hazard Severity Zone areas. 800 feet for Moderate Fire Hazard Severity Zone. 1,320 feet). Secondary egress/access fire apparatus access roads shall provide independent egress/access from/to the area or as otherwise approved by the Fire Department. Secondary egress/access fire apparatus access roads shall be as remote as possible from the primary fire apparatus access road to reduce the possibility that both routes will be obstructed by a single emergency. Additional fire apparatus access roads based on the potential for impairment by vehicle congestion, condition of terrain, climatic conditions, anticipated magnitude of a potential incident, or other factors that could limit access may be required by the Fire Department. Reference CFC 503.1.2 and Riverside County Office of the Fire Marshal Guidelines.

6. Fire Department Building Construction Plan Review - Submittal of construction plans to the Fire Department will be required. Final fire and life safety conditions will be addressed when the Fire Department reviews the plans. These conditions will be based on California Fire Code, California Building Code (CBC), and related codes/standards adopted at the time of construction plan submittal. Reference CFC 105.1.

7. Fire Sprinkler System - All new commercial buildings and structures 3,600 square feet or larger will be required to install a fire sprinkler system. Reference CFC 903.2 as amended by the County of Riverside.

8. Fire Alarm and Detection System - A water flow monitoring system and/or fire alarm system may be required as determined at time of building construction plan review. Reference CFC 903.4 and CFC 907.2.

9. Unlimited Area Building - Based upon the building construction type and requirements of the California Building Code (CBC), 60 feet of open space (with some reductions permitted) may be required around the building. Consult with your architect for additional information. Reference CBC 507.

10. Traffic Calming Devices - Requests for installation of traffic calming designs/devices on fire apparatus access roads shall be submitted and approved by the Fire Code Official. Reference CFC 503.4.1.

11. Gate Access: All electronically operated gates shall be provided with Knox key switches and automatic sensors for access. These gates shall be provided with access to gate equipment or another method to open the gate if there is a power failure. (Manual gates shall not be locked unless a Knox Box containing the key to the lock is installed in an approved location on the approach side of the gate). A pedestrian gate, if used to provide access, shall be a minimum 3 feet wide and provided with a Knox Box/Padlock if locked. Reference CFC 506.1.

12. Fire Department Access Doors – If high piled storage will be utilized in the building, Fire Department

ADVISORY NOTIFICATION DOCUMENT

Fire

Fire. 2 General Fire Department Advisory Comments (cont.)

Access Doors may be required every 150 feet along all portions of the interior of the building that are along the fire apparatus access road. Reference CFC 3206.7.

13. Water Plans: If fire hydrants are required to be installed, applicant/developer shall furnish the water system fire hydrant plans to the Fire Department for review and approval prior to building permit issuance. Plans shall be signed by a registered civil engineer, and shall confirm hydrant type, location, spacing, and minimum fire flow. Once plans are signed and approved by the local water authority, the originals shall be presented to the Fire Department for review and approval. Reference CFC 105.4.1.

14. Emergency Responder Communication Coverage Systems - Projects that do not meet the exceptions set forth by the Riverside County Office of the Fire Marshal shall provide plans for an emergency responder radio coverage system. Reference CFC 510.1 and Riverside County Office of the Fire Marshal Guidelines.

Planning

Planning. 1 015 - Planning - Landscape Requirement

Landscape Requirement

This condition applies to both onsite and offsite (ROW) landscaping:

The developer/ permit holder shall:
1) Ensure all landscape and irrigation plans are in conformance with the APPROVED EXHIBITS;
2) Ensure all landscaping is provided with California Friendly landscaping and a weather-based irrigation controller(s) as defined by County Ordinance No. 859;
3) Ensure that irrigation plans which may use reclaimed water conform with the requirements of the local water purveyor; and,
4) Be responsible for maintenance, viability and upkeep of all slopes, landscaped areas, and irrigation systems until the successful completion of the twelve (12) month inspection or those operations become the responsibility of the individual property owner(s), a property owner's association, or any other successor-in-interest, whichever occurs later.

To ensure ongoing maintenance, the developer/ permit holder or any successor-in-interest shall:
1) Connect to a reclaimed water supply for landscape irrigation purposes when reclaimed water is made available.
2) Ensure that landscaping, irrigation and maintenance systems comply with the Riverside County Guide to California Friendly Landscaping, and Ordinance No. 859.
3) Ensure that all landscaping is healthy, free of weeds, disease and pests.

Planning. 2 Business Licensing

Every person conducting a business within the unincorporated area of Riverside County, as defined in Riverside County Ordinance No. 857, shall obtain a business license. For more information regarding business registration, contact the Business Registration and License Program Office of the Building and Safety Department.

ADVISORY NOTIFICATION DOCUMENT

Planning

Planning. 3 Causes for Revocation

In the event the use hereby permitted under this permit,
a) is found to be in violation of the terms and conditions of this permit,
b) is found to have been obtained by fraud or perjured testimony, or
c) is found to be detrimental to the public health, safety or general welfare, or is a public nuisance, this permit shall be subject to the revocation procedures.

Planning. 4 Ceased Operations

In the event the use hereby permitted ceases operation for a period of one (1) year or more, this approval shall become null and void.

Planning. 5 Construction Traffic Control

Project construction activities are required to comply with the California Manual on Uniform Traffic Control Devices, which specify that temporary traffic controls shall be provided during construction, such as a flag person, during all phases of construction to facilitate the flow of construction traffic on streets abutting the Project site.

Planning. 6 Expiration Date Use Case

This approved permit shall be used within NINE (9) years from the approval date; otherwise, the permit shall be null and void.

The term used shall mean the beginning of construction pursuant to a validly issued building permit for the use authorized by this approval. Prior to the expiration of the 9 years, the permittee/applicant may request an extension of time to use the permit. The extension of time may be approved by the Assistant TLMA Director upon a determination that a valid reason exists for the permittee not using the permit within the required period. If an extension is approved, the total time allowed for use of the permit shall not exceed ten (10) years.

Planning. 7 Fugitive Dust

The Project is required to comply with the provisions of the SCAQMD Rule 403 “Fugitive Dust.” Rule 403 requires implementation of best available dust control measures during construction activities that generate fugitive dust, such as earth moving, grading, and construction equipment travel on unpaved roads. To comply with Rule 403, and prior to grading permit issuance, the County of Riverside shall verify that notes are specified on the Project’s grading plans requiring Rule 403 compliance. Project construction contractors would be required to ensure compliance with the notes and permit periodic inspection of the construction site by County of Riverside staff or its designee to confirm compliance. To comply with Rule 403:

- In order to limit fugitive dust emissions, all clearing, grading, earth-moving, or excavation activities shall cease when winds exceed 25 miles per hour (mph) per SCAQMD guidelines.
- The construction contractor(s) shall ensure that all distributed unpaved roads and disturbed areas

ADVISORY NOTIFICATION DOCUMENT

Planning

Planning. 7 Fugitive Dust (cont.)

within the Project site are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three (3) times a day, preferably in the mid-morning, afternoon, and after work is done for the day.

- The construction contractor(s) shall ensure that traffic speeds on unpaved roads and the Project site area are reduced to 15 miles per hour or less.

Planning. 8 Industrial Occupant Change

Prior to initial occupancy, upon tenant/occupant change, or upon change in industrial use, the permit holder shall provide a letter from the Planning Department to Building & Safety verifying no need for further environmental, hazardous materials or air quality review as a result of the change.

Planning. 9 Logistics/Warehouse – General/Operational Measures

The following measures shall be complied with generally through design/permitting of the project and through continued operation of the project.

1. On-site speed bumps shall not be allowed. Truck loading bays and drive aisles shall be designed to minimize truck noise.

2. Facility operators shall prohibit truck drivers from idling more than five (5) minutes and require operators to turn off engines when not in use, in compliance with the California Air Resources Board regulations.

3. All lighting used in conjunction with a warehouse/distribution facility operations, shall be directed down into the interior of the site and not spill over onto adjacent properties.

4. Facility operators shall maintain records of their facility owned and operated fleet equipment and ensure that all diesel-fueled Medium-Heavy Duty Trucks (“MHDT”) and Heavy-Heavy Duty (“HHD”) trucks with a gross vehicle weight rating greater than 19,500 pounds accessing the site use year CARB compliant 2010 or newer engines. The records should be maintained on-site and be made available for inspection by the County.

5. Facility operators shall train their managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.

6. Facility operators shall coordinate with CARB and SCAQMD to obtain the latest information about regional air quality concentrations, health risks, and trucking regulations.

7. Facility operators shall establish specific truck routes between the facility and regular destinations, identifying the most direct routes to the nearest highway/freeway and avoid traveling near sensitive receptors.

8. Facility operators shall require their drivers to park and perform any maintenance of trucks in designated on-site areas and not within the surrounding community or on public streets.

9. Facility operators for sites that exceed 250 employees shall establish a rideshare program, in

ADVISORY NOTIFICATION DOCUMENT

Planning

Planning. 9 Logistics/Warehouse – General/Operational Measures (cont.)

accordance with AQMD rule 2202, with the intent of discouraging single-occupancy vehicle trips and promote alternate modes of transportation, such as carpooling and transit where feasible.

10. If a public address (PA) system is being used in conjunction with a warehouse/distribution facility operations, the PA system shall be oriented away from sensitive receptors and the volume set at a level not readily audible past the property line.

11. Facility Operation shall comply with the exterior noise decibel levels as required by Ord. 847 (Noise Ordinance), which includes a maximum exterior decibel level of 55 dba (between 7:00 a.m. and 10:00 p.m.) and 45 dba (between 10:00 p.m. and 7:00 a.m.) as measured on adjacent occupied residences, or as modified by the most current version of Ordinance No. 847.

12. Each Facility shall designate a Compliance Officer responsible for implementing the measures described herein and/or in the project conditions of approval and mitigation measures. Contact information should be provided to the County and updated annually, and signs should be posted in visible locations providing the contact information for the Compliance Officer to the surrounding community. These signs shall also identify the website and contact information for the South Coast Air Quality Management District.

13. On-site equipment, such as forklifts, shall be electric with the necessary electrical charging stations provided.

Planning. 10 No Outdoor Advertising

No outdoor advertising display, sign or billboard (not including on-site advertising or directional signs) shall be constructed or maintained within the property subject to this approval.

Planning. 11 No Resident Occupancy

No permanent occupancy shall be permitted within the property approved under this plot plan as a principal place of residence. No person shall use the premises as a permanent mailing address nor be entitled to vote using an address within the premises as a place of residence.

Planning. 12 Outside Storage

No outside storage is proposed as a part of this development proposal.

Planning. 13 Reclaimed Water

The permit holder shall connect to a reclaimed water supply for landscape watering purposes when secondary or reclaimed water is made available to the site.

Planning. 14 Review Fees

Any subsequent submittals required by these conditions of approval, including but not limited to grading plan, building plan, or mitigation and monitoring review, shall be reviewed on an hourly basis (research

ADVISORY NOTIFICATION DOCUMENT

Planning

Planning. 14 Review Fees (cont.)

fee), or other such review fee as may be in effect at the time of submittal, as required by Ordinance No. 671. Each submittal shall be accompanied with a letter clearly indicating which condition or conditions the submittal is intended to comply with.

Planning. 15 SCAQMD Rule 402

The Project is required to comply with the provisions of the SCAQMD Rule 402, "Nuisance" which requires that a person shall not discharge air contaminants or other materials that would cause health or safety hazards to any considerable number of persons or the public.

Planning. 16 Signage

A sign program is not a part of this Project proposal and when submitted shall be in compliance with Article XIX of Ordinance No. 348 in regards to commercial signage.

Planning-CUL

Planning-CUL. 1 Human Remains

If human remains are found on this site, the developer/permit holder or any successor in interest shall comply with State Health and Safety Code Section 7050.5.

Planning-CUL. 2 PDA 8407 Accepted

County Archaeological Report (PDA) No. 8407 submitted for this project (PPT230048) was prepared by BFSA Environmental Services, a Perennial Company and is entitled: "A PHASE I CULTURAL RESOURCES STUDY FOR THE THRIFTY OIL WAREHOUSE PROJECT", dated January 16, 2024.
PDA concludes: The Phase I cultural resources assessment for the Thrifty Oil Warehouse Project did not identify any cultural resources. However, the property is located in proximity to multiple prehistoric and historic resources and has been impacted by agricultural use, partial development, and clearing. These impacts typically remove evidence of surface scatters of cultural artifacts.
Therefore, given the past impacts to the property coupled with the frequency of resources within the one mile, the obstructed ground visibility during the survey, and the noted historic occupation of the property, there still remains potential for the inadvertent discovery of archaeological resources during grading. As such, a cultural resources Mitigation Monitoring and Reporting Program (MMRP) is recommended as a condition of approval for this property, which should include the monitoring of all ground-disturbing activities within the property by an archaeologist and Native American monitor.
PDA recommends: As a condition of project approval, a MMRP is recommended to identify any cultural resources that may be uncovered during grading and, subsequently, to mitigate potential impacts to any discovered archaeological resources evaluated as significant.
These documents are herein incorporated as a part of the record for project.

Planning-CUL. 3 Unanticipated Resources

The developer/permit holder or any successor in interest shall comply with the following for the life of this permit.

ADVISORY NOTIFICATION DOCUMENT

Planning-CUL

Planning-CUL. 3 Unanticipated Resources (cont.)

If during ground disturbance activities, unanticipated cultural resources* are discovered, the following procedures shall be followed:
All ground disturbance activities within 100 feet of the discovered cultural resource shall be halted and the applicant shall call the County Archaeologist immediately upon discovery of the cultural resource. A meeting shall be convened between the developer, the project archaeologist**, the Native American tribal representative (or other appropriate ethnic/cultural group representative), and the County Archaeologist to discuss the significance of the find. At the meeting with the aforementioned parties, a decision is to be made, with the concurrence of the County Archaeologist, as to the appropriate treatment (documentation, recovery, avoidance, etc.) for the cultural resource. Resource evaluations shall be limited to nondestructive analysis.
Further ground disturbance shall not resume within the area of the discovery until the appropriate treatment has been accomplished.
* A cultural resource site is defined, for this condition, as being a feature and/or three or more artifacts in close association with each other.
** If not already employed by the project developer, a County approved archaeologist shall be employed by the project developer to assess the significance of the cultural resource, attend the meeting described above, and continue monitoring of all future site grading activities as necessary.

Planning-GEO

Planning-GEO. 1 Gen - Custom

County Geologic Report GEO No. 240009, submitted for the project PPT230048, was prepared by GEO Environmental Resources, Inc., and is titled “Geotechnical Engineering Exploration and Analysis, propose Commercial Building, 23641 Placentia Ave, Perris, CA”, dated February 8, 2024. In addition, GEO Environmental Resources, Inc. prepared “Response to County Geologic Report Review, proposed Commercial Building, 23641 Placentia Ave, Perris, CA” dated November 4, 2024. This document is herein incorporated as a part of GEO240009.

GEO240009 concluded:

1. There are no active faults below the subject property.
2. The site does not lie within the boundaries of an “Earthquake Fault Zone” as defined by the State of California in the Alquist-Priolo Earthquake Fault Zoning Act.
3. The average ground water level is approximately 80 feet below existing ground surface.
4. The liquefaction potential of to cause damage to the structure is unlikely.
5.

GEO240009 recommended:

1. To develop a uniform sub-surface layer with increased support characteristics, following completion of the trees and vegetation removal, the proposed building area to be over-excavated to approximate depth of eight (8) feet below its proposed Rough Finished Grade (RFG) elevation or an equivalent of four (4) feet below the proposed foundation subgrade (whichever is lower in elevation).
2. To mitigate the future potential settlement, due to the presence of the collapsible soils, we are recommending that the proposed building pad be over-excavated to approximate depth of four (4) below bottom of its proposed footings grade.

ADVISORY NOTIFICATION DOCUMENT

Planning-GEO

Planning-GEO. 1 Gen - Custom (cont.)

GEO240009 is hereby approved for Planning purposes associated with PPT230048.

Transportation

Transportation. 1 RCTD - USE - General Transportation Conditions

With respect to the conditions of approval for the referenced tentative exhibit, the land divider shall provide all street improvements, street improvement plans and/or road dedications set forth herein in accordance with the Riverside County Road Improvement Standards (Ordinance No. 461.11). It is understood that the exhibit correctly shows acceptable centerline elevations, all existing easements, traveled ways, and drainage courses with appropriate Qs, and that their omission or unacceptability may require the exhibit to be resubmitted for further consideration. The County of Riverside applicable ordinances and all conditions of approval are essential parts and a requirement occurring in ONE is as binding as though occurring in all. All questions regarding the true meaning of the conditions shall be referred to the Transportation Department.

The Project shall submit a preliminary soils and pavement investigation report addressing the construction requirements within the road right-of-way.

A signing and striping plan is required for this project. The Project shall be responsible for any additional paving and/or striping removal caused by the striping plan or as approved by the Director of Transportation.

Alterations to natural drainage patterns shall require protecting downstream properties by means approved by the Transportation Department.

If the Transportation Department allows the use of streets for drainage purposes, the 10-year discharge shall be contained in the top of curb or asphalt concrete dikes, and the 100-year discharge shall be contained in the street right-of-way.

The Project shall install street name sign(s) in accordance with County Standard Nos. 1220/1221 and as directed by the Transportation Department.

All corner cutbacks shall be applied per Standard No. 805, Ordinance No. 461.11, except for corners at Entry streets intersecting with General Plan roads, they shall be applied per Exhibit C of the Countywide Design Guidelines.

All centerline intersections shall be at 90-degrees, plus or minus 5-degrees.

At intersections, local streets (below County Collector Road Standard) shall have a minimum 50 FT tangent, measured from flowline/curb-face to the end of the 50 FT tangent section.

The project shall comply with the most current ADA requirements. Ramps shall be constructed at all 4 legs of 4-way intersections and T-intersections per Standard No. 403, sheets 1 through 7 of Ordinance No. 461.11.

The off-site rights-of-way for access road(s) required by the project shall be accepted to vest title in the

ADVISORY NOTIFICATION DOCUMENT

Transportation

Transportation. 1 RCTD - USE - General Transportation Conditions (cont.)

name of the public if not already accepted.

If there are previously dedicated public roads and utility easements that were not accepted by the County, the Project shall file a separate application to the County of Riverside, Office of the County Surveyor, for the acceptance of the existing dedications by resolution and bear all costs thereof.

Additional information, standards, ordinances, policies, and design guidelines can be obtained from the Transportation Department Web site: https://rctlma.org/trans/. If you have questions, please call the Plan Check Section at (951) 955-6527.

Improvement plans for the required improvements must be prepared and shall be based upon a design profile extending a minimum of 300 feet beyond the limit of construction at a grade and alignment as approved by the Riverside County Transportation Department. Completion of road improvements does not imply acceptance for maintenance by County. Street Improvement Plans shall comply with Ordinance No. 461.11, Riverside County Improvement Plan Check Policies and Guidelines, which can be found online http://rctlma.org/trans.

Waste Resources

Waste Resources. 1 Waste - General

Hazardous materials are not accepted at Riverside County landfills. In compliance with federal, state, and local regulations and ordinances, any hazardous waste generated in association with the project shall be disposed of at a permitted Hazardous Waste disposal facility. Hazardous waste materials include, but are not limited to, paint, batteries, oil, asbestos, and solvents. For further information regarding the determination, transport, and disposal of hazardous waste, please contact the Riverside County Department of Environmental Health, Environmental Protection and Oversight Division.

AB 341 focuses on increased commercial waste recycling as a method to reduce greenhouse gas (GHG) emissions. The regulation requires businesses and organizations that generate four or more cubic yards of waste per week and multifamily units of 5 or more, to recycle. A business shall take at least one of the following actions in order to reuse, recycle, compost, or otherwise divert commercial solid waste from disposal:

- Source separate recyclable and/or compostable material from solid waste and donate or self-haul the material to recycling facilities.
- Subscribe to a recycling service with their waste hauler.
- Provide recycling service to their tenants (if commercial or multi-family complex).
- Demonstrate compliance with the requirements of California Code of Regulations Title 14.

For more information, please visit:
www.rivcowm.org/opencms/recycling/recycling_and_compost_business.html#mandatory

Consider xeriscaping and using drought tolerant/low maintenance vegetation in all landscaped areas of the project.
The use of mulch and/or compost in the development and maintenance of landscaped areas within the project boundaries is recommended. Recycle green waste through either onsite composting of grass, i.e., leaving the grass clippings on the lawn, or sending separated green waste to a composting facility.

ADVISORY NOTIFICATION DOCUMENT

Waste Resources

Waste Resources. 1 Waste - General (cont.)

AB 1826 requires businesses and multifamily complexes to arrange for organic waste recycling services. Those subject to AB 1826 shall take at least one of the following actions in order to divert organic waste from disposal:
-Source separate organic material from all other recyclables and donate or self-haul to a permitted organic waste processing facility.
-Enter into a contract or work agreement with gardening or landscaping service provider or refuse hauler to ensure the waste generated from those services meet the requirements of AB 1826.

Comply with SB 1383 which establishes regulations to reduce organics waste disposal and went into effect on January 1, 2022. This law establishes methane emissions reduction targets in a statewide effort to reduce emissions of short-lived climate pollutants caused by organics waste disposal.

CASE: PPT230048
EXHIBIT: EJ Checklist
DATE: 6/25/2025
PLANNER: KMason
☐ Meeting ☐ Comment Agenda ☑ Final

PROJECT: PPT230068
PERRIS, CA
23641 PLACENTIA AVENUE, PERRIS

Health Risk Reduction	Mitigation Measure or Condition of Approval	Project Design Feature	Policy Not Applicable	Notes (Not to exceed 250 words)
HC 16.5 – Location to Sensitive Receptors. Evaluate the compatibility of unhealthy and polluting land uses being located near sensitive receptors including possible impacts on ingress, egress, and access routes. Similarly, encourage sensitive receptors, such as housing, schools, hospitals, clinics, and childcare facilities to be located away from uses that pose potential hazards to human health and safety.		X		**Compatible Through Project Design Feature:** As a Project Design Feature, the project was located in a primarily industrial area with a few sensitive receptors nearby. The facility will be designed to accommodate a variety of light industrial uses, with no significant unhealthy and polluting impacts. The building and related truck courts are designed to be as far away from sensitive receptors as possible. The EA/IS determined no significant impacts would occur related to Air Quality, Greenhouse Gas Emissions, or Health Risks. The Project was designed to ensure the bulk of the traffic would be directed away from sensitive receptors.
HC 16.6 – Good Neighbor Policy. For large scale logistics, warehouse and distribution projects, address the Good Neighbor Policy for Logistics and Warehouse/Distribution uses criteria adopted by the Board of Supervisors on November 19, 2019, and as may be subsequently amended.		X		**Compatible Through Project Design Feature**: While the Good Neighbor Policy is intended for buildings 300,000 SF and above, as a Project Design Feature, we are nonetheless addressing the intent of most of its guidelines. The Project includes a minimum 600 ft. buffer between the truck court and nearest sensitive receptors, while the County guidance is 300 ft. Applicant has engaged the community by way of community briefing at the MAC and engaged a dedicated community liaison so the neighbors are informed during the development process.
HC 16.10 – Compact Development. Plan for compact development projects in appropriate locations, including in existing communities and the clustering of affordable and mixed-income housing therein, that make the most efficient use of land and concentrate complementary uses close to transit or non-transit mobility options and advocate for expanded transit and non-transit mobility options to serve such areas.			X	**Policy Not Applicable**: Project is an industrial use and includes no housing.

HC 16.14 – Sensitive Receptors, Pesticides and Fertilizers. Assure that sensitive receptors are separated and protected from polluting point sources, as feasible, including agricultural businesses that produce or use pesticides and chemical fertilizers.			X	**Policy Not Applicable:** Project is an industrial use and includes no agricultural operations or use of pesticides or fertilizers other than for landscape maintenance..
HC 16.15 – Site Design and Industrial and Warehousing. Assure that site plan design protects people and land, particularly sensitive land uses such as housing and schools, from air pollution and other externalities associated with industrial and warehouse development through the use of barriers, distance, or similar solutions or measures from emission sources when possible.		X		**Compatible Through Project Design Feature:** As a Project Design Feature, the Project includes a minimum 600 ft buffer between the truck court and nearby sensitive receptors, while the County guidance is 300 ft. The building massing will serve to separate the truck court from the sensitive receptors, as described above. Truck traffic was designed to enter and exit on Placentia Avenue, and travel east to the 215/Placentia Avenue interchange, away from sensitive receptors. The EA/IS determined no significant impacts would occur related to Air Quality, Greenhouse Gas Emissions, or Health Risks.
HC 16.16 – Landscaping, Particulate Matter, and Air Pollution. Apply pollution control measures such as landscaping, vegetation, and green zones (in cooperation with the SCAQMD) and other materials, which trap particulate matter or control air pollution.		X		**Compatible Through Project Design Feature**: The Project is designed to comply with pollution control measures of SQAMD (South Coast Air Quality Management District) and uses materials and equipment to minimize air pollution. Landscaping is designed around the perimeter as well as within various parking areas. The facility will provide approximately 60,774 SF of landscaped area (approximately 15 percent of the net lot area), which meets the 15 percent (or 57,980 SF) minimum required by the County. The Project is consistent with the CAP (Riverside County Climate Action Plan) as it will implement many of the policies that reduce GHG (Greenhouse Gas) emissions. Project will result in approximately 1,706.88 MTCO 2e/yr. which is significantly below the County's screening threshold of 3,000 MTCO2e/yr.

HC 16.18 – Job Creation and Reduction of Vehicle Miles. Promote new development that emphasizes job creation and reduction in vehicle miles traveled in job- poor areas and does not otherwise contribute to onsite emissions to improve air quality.		X		**Compatible Through Project Design Feature:** With the development of the industrial building and in partnership with end user it is anticipated there will be approximately 181 local jobs created[1]. Placing the facility in fairly proximity to the housing rich and job-poor communities of Riverside County, therefore reducing employee commutes and distances traveled between consumer good distribution and retail outlets, which will ultimately lead to the reduction of vehicle miles traveled.
HC 16.22 – Industrial Water Use Discharges and Agriculture and Pesticide/Chemical Use. Discourage industrial uses which use large quantities of water in manufacturing or cooling processes that result in subsequent effluent discharges and encourage agricultural businesses to limit and reduce the production and use of pesticides and chemical fertilizers to the maximum extent possible thereby minimizing contaminated infiltration and runoff, including runoff to the Salton Sea and other standing bodies of water.		X		**Compatible Through Project Design Feature:** The ultimate light industrial and storage use is not expected to generate any industrial water discharge. The Project does not include the use of large quantities of water in manufacturing or cooling processes, nor does it include any agricultural uses. Project design includes underground detention basin to capture onsite storm water run off and grading design will route storm water runoff to this detention basin and ultimately contribute to replenishing the underlying groundwater aquifer. A Water Quality Management Plan (PWQMP) has been submitted for County review, that incorporates stormwater control for the postconstruction condition, and includes Low Impact Development (LID) site design, source control, and treatment control BMPs. The County will review and approve the PWQMP as part of the design for the building and approve design features that reduce runoff that could cause water quality impacts.
HC 16.23 – Industrial and Agriculture Uses and Toxic Contamination. Discourage industrial and agricultural uses which produce significant quantities of toxic emissions into the air, soil, and groundwater to prevent the contamination of these physical environments.			X	**Policy Not Applicable:** Light Industrial Warehouse end users will not be an agriculture use, nor a toxic industrial use, but a light industrial user.

[1] Based on building size and the County of Riverside Plan employee generation factor for every 1,030 SF of light industrial layout, the calculation results in an employee total of approximately 181 (Project layout is approximately 186,695 SF)

HC 16.24 – Compatibility Criteria for Industrial, Agricultural, And Adjacent Land Uses. Ensure compatibility between industrial development and agricultural uses and adjacent land uses. To achieve compatibility, industrial development and agricultural uses will be required to include criteria addressing noise, land, traffic, and greenhouse gas emissions to avoid or minimize creating adverse conditions for adjacent communities.		X		**Compatible Through Project Design Feature:** No significant compatibility issues were identified in the EA/IS related to any environmental resources or impacts to adjacent communities. Project and future occupants will abide by all county regulations including but not limited to those that limit impacts associated with noise, land use, traffic, and GHG.
HC 16.25 – Mining Projects and Compatibility. Require the conversion of mining operations into uses that are compatible with surrounding areas in accordance with the Surface Mining and Reclamation Act.			X	**Policy Not Applicable**: The policy does not apply to the project. Project does not propose development of, nor is it near any mining projects.
Food Access	**Mitigation Measure or Condition of Approval**	**Project Design Feature**	**Policy Not Applicable**	**Notes (Not to exceed 250 words)**
HC 17.2 – Building Setback and Activation of Sidewalks. Orient buildings closer to streets or provide landscaped promenades that connect buildings to bus stops with routes that provide access to shopping centers, grocery stores, and areas where farmer's markets are held.			X	**Policy Not Applicable:** The policy does not apply to the project. An industrial warehouse is proposed in an area without transit stops or commercial uses. However, this Project will be incorporating public streets and sidewalks along its perimeter and a public trail along Placentia Avenue.
HC 17.3 – Site Design and Interior Spaces. Encourage site design for new development to accommodate interior spaces for recreational and other neighborhood uses, such as community gardens and farmer's markets in order to increase access to fresh and healthy foods; and to render such spaces convenient and available to neighboring streets, neighborhoods, and other nearby facilities to fill the void or lack of small grocery stores and increase access to fresh and healthy foods within EJ Communities.			X	**Policy Not Applicable:** The policy does not apply to the project. No proposed recreational or neighborhood uses are feasible within an industrial building.
HC 17.5 – Diverse Food Establishments. Encourage the development of diverse food establishments prioritizing mom and pop healthy food establishments and community kitchens for homemade foods to be sold in areas with a high concentration of fast-food establishments, convenience stores, and liquor stores.			X	**Policy Not Applicable:** The policy does not apply to the project as is it a light industrial use, not a food establishment.

HC 17.6 – Affordable Access to Fruits and Vegetables. Work with local farmers and growers to develop a program to provide affordable access to fruits and vegetables grown in the area to the EJ communities. Identify and establish the location of grocery stores, healthy corner stores, farmer's markets all of which carry a complement of healthy foods to be located in close proximity to transit nodes and other active transportation system links.			X	**Policy Not Applicable**: The policy does not apply to the project as it is not produce related.
HC 17.7 – Edible Landscaping and Community Gardens. Promote edible landscaping and community gardens for suitable public and private land as well as for residential and mixed-use projects.			X	**Policy Not Applicable**: The policy does not apply to the project as it is not a community garden.

Safe & Sanitary Homes	**Mitigation Measure or Condition of Approval**	**Project Design Feature**	**Policy Not Applicable**	**Notes (Not to exceed 250 words)**
HC 18.7 – Polluting Uses and Noticing Requirements. Discourage industrial, agricultural, and other land uses that may pollute and cause health conflicts with residential land uses either directly or indirectly. Ensure that community members are properly notified and involved in the decision-making process for new land-use proposals.		X		**Compatible Through Project Design Feature:** As a light industrial and likely warehousing use, no significant impacts identified in EA/IS; however, to meet Environmental Justice Requirements, and to inform the community pro-actively about the project the Applicant has presented the project to the community at a meeting of the Mead Valley MAC.
HC 18.8 – Design to Limit Exposure of Residential Development. Work with the development community including small property and mobile home park owners so new residential development, particularly for low-income households, is designed to limit their exposure to high noise levels, pesticide and fertilizer exposure, dust pollution, and other potential impacts associated with adjacent industrial and agricultural uses.		X		**Compatible Through Project Design Feature:** As a light industrial and likely warehousing use, it's a use with low impact to the neighbors as identified in the EA/IS. However, to meet Environmental Justice Requirements and to inform the community proactively the project has been presented to Mead Valley MAC.
HC 18.9 – Design and Character of the Surrounding Area. Encourage the location and design of new developments to visually enhance and not degrade the character of the surrounding area through consideration of the following concepts.		X		**Compatible Through Project Design Feature:** The area is largely comprised of big box industrial facilities, or land planned and proposed to be developed into new industrial facilities. The currently undeveloped parcels consist largely of unimproved lots and/or obsolete improvements. The Project is proposed to be constructed consistent with the height limits per the zoning, the proposed building color is

				to be neutral earth tones to blend with the environment.. The Project design incorporates significant landscaping, roadway infrastructure, utility undergrounding, sidewalks and trails into the Project design features. The layering of landscaping between the Proposed building and the surrounding roadways would provide visual depth and distance between the roadways and Proposed structures, while functioning as a screen to trailer parking and truck yard.
a. Use of Design Standards. Using design standards of the appropriate Area Plan land use category.		X		**Compatible Through Project Design Feature:** The project was designed to meet standards specified in the Mead Valley Area Plan. Appropriate design modifications recommended by County staff have been incorporated. No significant aesthetics impacts have been identified in EA/IS.
b. Codes and Regulations. Construction of structures in accordance with the requirements of Riverside County's zoning, building, and other pertinent codes and regulations.		X		**Compatible Through Project Design Feature:** As a Project Design Feature all applicable state and Riverside County codes have been incorporated into the design of the Project as well as building construction requirements.
c. Landscaping Plan. Require that an appropriate landscape plan be submitted and implemented for development projects subject to discretionary review.		X		**Compatible Through Project Design Feature:** As a Project Design Feature Landscape Plans were developed to County standards and have been submitted for review and approval.

d. Drought Resistant Landscaping. Use of drought-tolerant landscaping that incorporates adequate drought conscious irrigation systems.		X		**Compatible Through Project Design Feature:** As a Project Design Feature Landscape Plans have been submitted that were developed to County standards and incorporate low impact development (LID) standards that includes water conservation. Drought tolerant plants are incorporated into the design, all being on the County of Riverside California Friendly Plant list.
e. Energy Efficiency in Design. Application of energy efficiency through street configuration, building orientation, and landscaping to capitalize on shading and facilitate solar energy.		X		**Compatible Through Project Design Feature:** As a Project Design Feature plans have been submitted and were developed to State and/or County standards to meet or exceed energy efficiency. A roof solar system and battery storage units will be included as part of the Project. Trees were incorporated into the landscape design not only for aesthetic purposes, but also to provide shade.
f. Water Conservation. Application of water conservation techniques, such as groundwater recharge basins, use of porous pavement, drought-tolerant landscaping, and water recycling, as appropriate.		X		**Compatible Through Project Design Feature:** As a Project Design Feature plans include appropriate water conservation techniques as well as incorporation of WQMP underground detention basin to both control run-off and recharge groundwater aquifers.
g. Innovative Design. Encourage innovative and creative design concepts.		X		**Compatible Through Project Design Feature:** As a Project Design Feature efforts were made by the Applicant to have an eye toward long term ownership, as such appropriate care was applied to the quality design and seamless operation of the proposed Project. Where feasible, architectural plans have incorporated innovative designs, (such as auto and truck EV charging stations) and creative design into the primary Project features. Care was exercised in the Project development to select an attractive upscale design, with colors appropriate for the surrounding landscape and community. The Project landscaping was likewise selected to be aesthetically pleasing and compatible with the surrounding land uses.

h. Public Art. Encourage the provision of public art that enhances the community's identity, which may include elements of historical significance and creative use of children's art.			X	**Policy Not Applicable:** Due to the project's light industrial use and location in a semi-rural area with very little vehicular and no expected pedestrian traffic, the provision of public art does not apply to Project design.
i. Signage. Include consistent and well-designed signage that is integrated with the building's architectural character.		X		**Compatible Through Project Design Feature:** Signage plans are not included in current plans, but will be designed by future tenant and subject to review and approval by the County.
j. Vehicular Access. Provide safe and convenient vehicular access and reciprocal access between adjacent commercial uses.		X		**Compatible Trough Project Design Feature:** There are no adjacent non-industrial commercial uses, however care was exercised to ensure the Project would not impact neighbors access to their properties. Above-standard truck stacking is being provided as part of the design.
k. Service Areas and Residential. Locate site entries and storage bays to minimize conflicts with adjacent residential neighborhoods.		X		**Compatible Through Project Design Feature:** There are approximately five rural residential uses west of the Project site across Tobacco Road. Therefore care was exercised to ensure the Project would not negatively impact the neighbors' access into their properties. The newly constructed road infrastructure will facilitate the residents' access to their properties. Above-standard truck stacking is being provided as part of the design and will be directed away from the residential areas.
l. Mitigation. Mitigate noise, odor, lighting, pollution exposure, and other impacts on surrounding properties.		X		**Compatible Through Project Design Feature:** All potential impacts have been addressed either through purposeful building design or by adherence to local, regional or state regulations. Noise was mitigated by placing truck courts away from residences, security lighting will be directed down and shielded from neighbors. Pollution and odors will be limited by the nature of the proposed light industrial and warehouse uses. Environmental review of the Project, as designed, determined no significant impacts related to noise, odor, lighting, pollution, or any potential impacts to adjacent properties.

m. Landscaping in Open Spaces and Parking Lots. Provide and maintain landscaping in open spaces and parking lots.		X		**Compatible Through Project Design Feature:** Landscaping in open spaces, around parking lots and Project perimeters is designed to exceed County standards. The project will facilitate ongoing maintenance by the installation of automated irrigation systems and adhering to Low Impact Development (LID) standards.
n. Drought Tolerant Landscaping. As feasible, maximize landscape coverage with an emphasis on drought tolerant landscaping.		X		**Compatible Through Project Design Feature:** Drought tolerant plants are incorporated into the design, all being on the County of Riverside California Friendly Plant list and design includes related irrigation.
o. Preservation of Natural Features. Preserve, as feasible, natural features, such as unique natural terrain, arroyos, canyons, and other drainage ways, and native vegetation, wherever possible, particularly where they provide continuity with more extensive regional systems.			X	**Policy Not Applicable:** The Project site is vacant, contains no drainages or waterways, or native vegetation other than weeds and grasses.
p. Pedestrian Activity.			X	**Policy Not Applicable:** Due to the Project being light industrial, this requirement does not apply. The Project will nonetheless incorporate sidewalks along public streets and a trail along Placentia Avenue to facilitate pedestrian activity.

q. Integration of Parking Lots. Design parking lots and structures to be functionally and visually integrated and connected.			X	**Policy Not Applicable:** Parking provided for the project is designed to meet industrial use needs including those for 4-axle trucks and trailers. Separation between passenger vehicle and truck/trailer parking is provided. Pedestrian, including ADA access in and around the building and parking lots, has been carefully designed to provide safe access around the project and between the building and parking lot.
r. Building Access Points. As feasible, site building access points along sidewalks, pedestrian areas, and bicycle routes, and include amenities that encourage pedestrian activity where such passthrough areas include wayfinding signage, street trees, grade and lateral separation from roads, all with consideration given to adequate safety lighting, and landscape screening.			X	**Policy Not Applicable:** Due to the Project being light industrial, this requirement does not apply. Nonetheless, as a Project Design Feature, sidewalks, a trail on Placentia Avenue, and bicycle storage onsite Have been designed. Security perimeter lighting and fencing around truck courts will be provided as well.
s. Pedestrian Crossings. Encourage safe and frequent pedestrian crossings and ensure that sidewalks and other pedestrian walkways provide continuity between land uses essential to a functional lifestyle, and as needed such sidewalks and pedestrian walkways should provide sufficient lighting and signage to ensure public safety.		X		**Compatible Through Project Design Feature:** Trails, sidewalks and pedestrian crossings have been incorporated into the project design.
t. Human Scale. Encourage the creation of a human-scale ground floor environment that includes public open areas that separate pedestrian space from auto traffic or where mixed, it does so with special regard to pedestrian safety.			X	**Policy Not Applicable:** Due to the Project being light industrial, this requirement does not apply.

u. Recognition of Open Space. Recognize open space, including hillsides, arroyos, riparian areas, and other natural features as amenities that add community identity, beauty, recreational opportunities, and monetary value to adjacent developed areas.			X	**Policy Not Applicable.** Project has no opportunity to provide for open space and does not impact any natural features considered community amenities.
v. Fire Hazards. Manage wildland fire hazards in the design of development proposals located adjacent to natural open space.			X	**Policy Not Applicable.** According to County of Riverside GIS database, and the County General Plan Figures the Project site is not within a High Fire Severity Zone. Riverside County Department of Building and Safety and the RCFD will review and approve building plans and conduct building inspections.
HC 18.12 – Safe Affordable Housing and Displacement. Prioritize the development of safe and affordable housing in EJ Communities while at the same time minimizing the displacement of existing residents consistent with Housing Element, Goal 2, Action 2.1h and as may be amended by the 6th Cycle Housing Element. Affordable housing projects should include various housing types that respond to community priorities and input.			X	**Policy Not Applicable.** The Project Site is largely undeveloped, though a small portion contains two occupied temporary housing or mobile home units will be removed as a result of the Project implementation. No housing is associated with development of the light industrial project.
HC 19.2 – Outdoor Recreation. Develop of high-quality parks, green space, hiking trails, recreational facilities and natural environments in areas where such facilities are lacking.			X	**Policy Not Applicable.** Project does not require provision of parks or other recreational facilities.

HC 19.6 – Local Trails. Plan for a system of local trails that enhances recreational opportunities and connects with regional trails.		X		**Compatible Through Project Design Feature:** The Project includes a public trail to be located on the south side of Placentia between Tobacco and Harvill. The trail will consist of a decomposed granite path suitable for equestrian or pedestrian uses. The proposed trail is part of the Riverside County master plan and will connect to other trails located on Patterson and Harvill allowing for the eventual completion of the plan.
HC 19.7 – Incorporate Recreation Opportunities. Incorporate open space, community greenbelt separators, and recreational amenities into development areas in order to enhance recreational opportunities and community aesthetics to improve the quality of life.			X	**Policy Not Applicable.** The Project does not require provision of parks or other recreational facilities. The Project Proponent has nonetheless contributed to area organizations that promote community events and youth sports, and fight hunger/homelessness.

Public Facilities	Mitigation Measure or Condition of Approval	Project Design Feature	Policy Not Applicable	Notes (Not to exceed 250 words)
HC 20.1 – Public Facilities and Supporting Infrastructure. New development should provide for public services including but not limited to solar street lighting, shading structures at bus stops, other supporting infrastructure, and extension of trash and recyclables pickup routes.		X		**Compatible Through Project Design Feature:** Project has been designed to meet required extension of public facilities as well as street lighting. More specifically public improvements including streets, sidewalks, streetlights and power, water, and sewer will be constructed on Tobacco Road and Placentia Avenue.. Existing power will poles will be removed and utilities placed underground. Existing area flooding conditions will be eliminated through the installation of a 2,700 foot storm drain system.

HC 20.2 – Development and Internal Pedestrian Circulation. New development should promote convenient internal pedestrian circulation among land uses (existing and proposed) within each neighborhood and connecting with existing adjacent developed areas and as applicable consistent with the Southern California Association of Governments Regional Transportation Plan/Sustainable Communities Strategy, and amendments thereto.			X	**Policy Not Applicable.** The project is industrial and does not require internal pedestrian circulation.
HC 20.4 - New development and conservation land uses should not infringe upon existing essential public facilities and public utility corridors, which include county regional landfills, fee-owned rights-of-way, and permanent easements, whose true land use is that of public facilities.		X		**Compatible Through Project Design Feature:** No County or any other public facilities or utilities existing, or planned are impacted by the Project.

Subject: Comments on Thrifty Oil North Business Center MND (SCH NO. 2025050128)

Dear Ms. Mason,

Thank you for the opportunity to comment on the Mitigated Negative Declaration (MND) for the proposed Thrifty Oil North Business Center Project. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance. Also, Golden State Environmental Justice Alliance formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

Project Information

The Project proposes the construction and operation of a 185,912 square foot (s.f.) non-refrigerated warehouse on 9.62-acres (gross) / 8.68-acres (net) of vacant land designated as APN 317-260-017 and 317-260-018 on the southeast corner of Placentia Avenue and Tobacco Road in the unincorporated Mead Valley area of Riverside County. The building includes 9,000 s.f. of office space (including office mezzanines) and 176,912 s.f. of warehouse space with 23 truck/trailer docking doors. The Project also includes dedication of approximately 0.943 acres for public right of way improvements to be built along Placentia Avenue and Tobacco Road as a part of the Proposed Project, as well as off-site utility improvements.

The Project requires the following discretionary approvals to proceed:

1. General Plan Amendment No. 230008 (GPA 230008): Request to change the land use from Rural Community-Very Low Density Residential (RC-VLDR) to Community Development-Business Park (BP).
2. Change of Zone No. 230030 (CZ2300030): Request to change the zone from Rural Residential one-acre minimum lot size (R-R-1) to Industrial Park (I-P)

3. Plot Plan No. 230048 (PPT230048): Request to construct a 185,912 SF non-refrigerated warehouse with 9 bays, two grade level doors and 23 dock high doors on 8.72(net) acres and approximately 0.943 acres for street dedication and drainage improvements.

The MND does not include a floor plan, detailed site plan, or a grading plan. The basic components of a Planning Application include a detailed site plan, floor plan, conceptual grading plan, written narrative, and elevations. Providing the complete grading plan and earthwork quantity notes is vital as the MND states that, "The grading quantities are not anticipated to balance on site and a net import of 62,025 cubic yards of fill material is anticipated." The MND does not provide a grading plan for verification of the quantity of import/export material associated with project construction and/or site preparation. Verification of the import/export materials is vital as it directly informs the quantity of necessary truck hauling trips due to soil import/export during the grading phase of construction. An EIR must be prepared to include all project application items in their wholly accurate and detailed form for public review.

Additionally, the MND states that, "the floor area ratio (FAR) would be 0.44 based on the gross lot size." However, the General Plan[1] requires FAR to be calculated utilizing net lot size. The MND is erroneous and misleading to the public and decision makers. An EIR must be prepared to provide the project's FAR utilizing the net lot size in order to provide an adequate and accurate informational document.

Project Piecemealing

The MND does not accurately or adequately describe the project, meaning "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment" (CEQA § 15378). The proposed project is a piecemealed portion of a larger overall project to be developed within a larger Thrifty Oil industrial center in the County.

The MND misleads the public and decision makers by circumventing adequate and accurate environmental analysis for the whole of the action - construction and operation of all Thrifty Oil buildings as a whole. At minimum, piecemealed projects include a proposal to construct a 194,479 square foot industrial building known as Plot Plan No. 2200047 (PPT220047) and Variance #230002[2] on the property adjacent to the south of the project site (APNs 317-260-016 and 317-260-015). The MND states that the parcels adjacent to the south of the project site (AAPNs 317-260-016 and 317-260-015) are also owned by the project applicant. The MND for Plot Plan No.

[1] Riverside County General Plan Appendix A: Glossary
https://planning.rctlma.org/sites/g/files/aldnop416/files/migrated/Portals-14-genplan-general-plan-2016-appendices-Appendix-A-1-120815.pdf
[2] https://ceqanet.opr.ca.gov/2024020843

2200047 (PPT220047) and Variance #230002 utilized this information in its justification to conclude the project would meet the findings for a requested Variance. The Master Site Plan submitted to the Riverside County Airport Land Use Commissions (RC ALUC)[3] depicts construction of both new industrial buildings on all of the parcels. Appendix J-2 depicts a required shared driveway between the south side of the project site and the parcel adjacent to the south that will accommodate truck/trailer traffic for both projects. Notably, Appendix J: Traffic states that, "With the developer being the owner of both the Project and the adjacent site to the south on Tobacco Road (PPT220047) at the request of County staff, a proposed "joint use" driveway has been provided per the recommendation of County staff. Driveway 2 would require a reciprocal access agreement being approved between the two properties and put in place prior to the start of construction of the southerly building." This is required due to the southerly building's driveway on Water Avenue (Driveway 1) inability to accommodate "the ingress and egress of heavy trucks and requires a 65-foot curb radius on the northeast corner[4]." The dependency of the southerly building on the proposed project site for vehicular access further illustrates the piecemealing between the two projects.

A project EIR must be prepared that accurately represents the whole of the action without piecemealing the project into separate, smaller development projects to present unduly low environmental impacts. CEQA Section 15161 describes project EIRs as examining "the environmental impacts of a specific development project. This type of EIR should focus primarily on the changes in the environment that would result from the development project. The EIR shall examine all phases of the project including planning, construction, and operation." The specific development project is the construction and operation of all Thrifty Oil buildings.

Additionally, CEQA Section 15146 requires that the degree of specificity in an EIR "will correspond to the degree of specificity involved in the underlying activity which is described in the EIR. (a) An EIR on a construction project will necessarily be more detailed in the specific effects of the project than will be an EIR on the adoption of a local general plan or comprehensive zoning ordinance because the effects of the construction can be predicted with greater accuracy." Because there are multiple proposed buildings as part of a single project, the project EIR must be more detailed in the specific effects of the project. A project EIR must be prepared which accurately represents the whole of the action without piecemealing the project into separate, smaller development projects or development areas to present unduly low environmental impacts.

---

[3] Agenda Item 3.2 and Attachments https://rcaluc.org/sites/g/files/aldnop421/files/2025-03/Merge_for_Website_01-09-25.pdf

[4] Appendix J-2: Traffic for PPT220047 https://files.ceqanet.opr.ca.gov/296231-1/attachment/_jdWcF13nGqwKwUrhyTXSt68pwAqbVT6csCxZ7BfUAJXmAGoxignKSLzOk3BaiuyQ8rXGesL8JDjXP2d0

Air Quality, Energy, and Greenhouse Gas Emissions

The MND excludes from its analysis the project's required General Plan Amendment and Zone Change applications to allow development of industrial uses on the project site. The site was not anticipated to be developed with industrial development and is therefore not currently accounted for in regional and local plans adopted for purposes of avoiding or mitigating environmental effects, including the AQMP, RTP/SCS, General Plan, and/or the County's Climate Action Plan. An EIR must be prepared to include this information for analysis and include a finding of significance.

The MND does not include meaningful analysis of relevant environmental justice issues in reviewing potential impacts, including cumulative impacts from the proposed project. Providing this information and using it for analysis is vital as the project site is located in a SB 535 Disadvantaged Community and is designated as an Environmental Justice Area by the General Plan. This is in conflict with CEQA Guidelines Section 15131 (c), which requires that "Economic, social, and particularly housing factors shall be considered by public agencies together with technological and environmental factors in deciding whether changes in a project are feasible to reduce or avoid the significant effects on the environment identified in the EIR. If information on these factors is not contained in the EIR, the information must be added to the record in some other manner to allow the agency to consider the factors in reaching a decision on the project." This is especially significant as the surrounding community is highly burdened by pollution. According to CalEnviroScreen 4.0[5], CalEPA's screening tool that ranks each census tract in the state for pollution and socioeconomic vulnerability, the proposed project's census tract (6065042904) ranks worse than 81% of the rest of the state overall. The surrounding community, including residences immediately adjacent to the west, bears the impact of multiple sources of pollution and is more polluted than average in many pollution indicators measured by CalEnviroScreen. For example, the project census tract ranks in the 95th percentile for ozone burden, 55th percentile for PM 2.5 burden, and 90th percentile for traffic impact burden. All of these environmental factors are attributed to heavy truck/trailer activity and traffic in the area. Ozone can cause lung irritation, inflammation, and worsening of existing chronic health conditions, even at low levels of exposure[6].

The census tract also ranks in the 71st percentile for hazardous waste[7] impacts. Hazardous waste generators and facilities contribute to the contamination of air, water and soil near waste generators and facilities can harm the environment as well as people.

[5] CalEnviroScreen 4.0 https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40
[6] OEHHA Ozone https://oehha.ca.gov/calenviroscreen/indicator/air-quality-ozone
[7] OEHHA Hazardous Waste Generators and Facilities
https://oehha.ca.gov/calenviroscreen/indicator/hazardous-waste-generators-and-facilities

Further, the census tract is a diverse community including 80% Hispanic, 8% African-American, and 3% Asian-American residents, whom are especially vulnerable to the impacts of pollution. The community has a high rate of low educational attainment, meaning 93% of the census tract over age 25 has not attained a high school diploma, which is an indication that they may lack health insurance or access to medical care. The community has a high rate of poverty, meaning 84% of the households in the census tract have a total income before taxes that is less than the poverty level. Income can affect health when people cannot afford healthy living and working conditions, nutritious food and necessary medical care[8]. Poor communities are often located in areas with high levels of pollution[9]. Poverty can cause stress that weakens the immune system and causes people to become ill from pollution[10]. Living in poverty is also an indication that residents may lack health insurance or access to medical care. Medical care is vital for this census tract as it ranks in the 91st percentile for incidence of cardiovascular disease and 66th percentile for incidence of asthma. The community also has a high rate of linguistic isolation, meaning 84% of the census tract speaks little to no English and faces further challenges and inequities due to this.

Additionally, the project's census tract (6065042904) and the census tracts adjacent to the project site (6065042010, 6065042620, and 6065042901) are identified as SB 535 Disadvantaged Communities[11]. This indicates that cumulative impacts of development and environmental impacts in the County and surrounding area are disproportionately impacting these communities. The negative environmental, health, and quality of life impacts of industrial development in the County have become distinctly inequitable. This information is not discussed or presented for analysis in the MND. The severity of environmental impacts particularly on these Disadvantaged Communities must be included for analysis as part of an EIR in order to comply with CEQA Guidelines Section 15131 (c).

The State of California lists three approved compliance modeling softwares[12] for non-residential buildings: CBECC-Com, EnergyPro, and IES VE. CalEEMod is not listed as an approved software. The CalEEMod modeling does not comply with the 2022 Building Energy Efficiency Standards and under-reports the project's significant Energy impacts and fuel consumption to the public and decision makers. Since the MND did not accurately or adequately model the energy impacts in compliance with Title 24, it cannot conclude the project will generate less than significant impacts and a finding of significance must be made. An EIR with modeling using one

[8] OEHHA Poverty https://oehha.ca.gov/calenviroscreen/indicator/poverty
[9] Ibid.
[10] Ibid.
[11] OEHHA SB 535 Census Tracts https://oehha.ca.gov/calenviroscreen/sb535
[12] California Energy Commission 2022 Energy Code Compliance Software https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency-1

of the approved software types must be prepared and circulated for public review in order to adequately analyze the project's significant environmental impacts. This is vital as the MND utilizes CalEEMod as a source in its methodology and analysis, which is clearly not an approved software.

It must also be noted that the County of Riverside is not listed as a jurisdiction with local energy standards approved by the CA Energy Commission[13]. According to the CA Energy Commission, "Local jurisdictions wishing to enforce locally adopted energy standards that exceed the current energy code are required to apply to the California Energy Commission (CEC). Local jurisdictions must demonstrate their local ordinance, or reach code, saves more energy than current statewide energy standards and is cost effective." Therefore, compliance with the County's CAP does not comply with CA Energy Commission standards or AB 32/SB 32. The MND is misleading to the public and decision makers by stating compliance with these standards when the local jurisdiction standards have not been approved by the CA Energy Commission. The MND broadly states that, "Compliance with the aforementioned mandatory measures would ensure that future development projects would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing energy use or increasing the use of renewable energy. Therefore, operational energy efficiency and renewable energy standards consistency impacts would be less than significant," when it has not provided any meaningful evidence to demonstrate that the pure existence of these regulations equates to the project's compliance with the regulations and that the project does not result in a significant and unavoidable impact.

Hazards and Hazardous Materials

The project reviewed and deemed consistent with the March Air Reserve Airport Land Use Compatibility Plan (ALUCP) at the January 9, 2025 Riverside County Airport Land Use Commission (RC ALUC) meeting[14] proposed a maximum of 42 feet building height. Figure 5B: Building Elevations and Profiles within the MND depicts that the maximum building height is 47.5 feet. This varies significantly from the project reviewed by the RC ALUC (and March Air Reserve Base and United States Air Force during the RC ALUC review process).

Further, the RC ALUC did not review or act on the requested General Plan Amendment to change the land use from Rural Community-Very Low Density Residential (RC-VLDR) to Community Development- Business Park (BP). The California Airport Land Use Planning Handbook[15] states

[13] Local Ordinances Exceeding the 2022 Energy Code, California Energy Commission https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency-2
[14] Agenda Item 3.2 and Attachments https://rcaluc.org/sites/g/files/aldnop421/files/2025-03/Merge_for_Website_01-09-25.pdf
[15] California Airport Land Use Planning Handbook https://dot.ca.gov/-/media/dot-media/programs/aeronautics/documents/californiaairportlanduseplanninghandbook-a11y.pdf

that Airport Land Use Commission review is required "Prior to the amendment of a general plan or specific plan, or the adoption of a zoning ordinance or building regulation within the ALUCP planning boundary, the ALUC shall review the plan, ordinance, or regulation for consistency with the ALUCP (PUC Section 21676(b))." Given that the proposed project includes a General Plan Amendment (GPA) and Zone Change to proceed, RC ALUC review and approval of the requested GPA is required. Since the RC ALUC has not reviewed the project as proposed in the MND in its entirety, an EIR must be prepared to include a finding of significance as there is no meaningful evidence presented to support a less than significant finding.

Land Use/Planning

The project faces significant inconsistencies with statutory requirements of the Housing Crisis Act (HCA) of 2019/Senate Bill (SB) 330[16]/SB 8[17]. The HCA/SB 330/SB 8 require replacement housing sites when land designated for housing development is changed to a non-housing use to ensure no net loss of housing capacity. Government Code Section 66300(b)(1)(A) requires that agencies shall not "change the general plan land use designation, specific plan land use designation, or zoning to a less intensive use below what was allowed under the land use designation and zoning ordinances in effect at the time of the proposed change." Under Government Code Section 66300(b)(1)(A), a "less intensive use" includes, but is not limited to, reductions to height, density, or floor area ratio, new or increased open space or lot size requirements, or new or increased setback requirements, minimum frontage requirements, or maximum lot coverage limitations, or any other action that would individually or cumulatively reduce residential development capacity. Pursuant to SB 330, replacement capacity for any displaced residential units must be provided **concurrently** at the **time of project approval**.

Government Code Section 66300 (h)(i)(1) states that, "this section does not prohibit an affected county or an affected city, including the local electorate acting through the initiative process, from changing a land use designation or zoning ordinance to a less intensive use, or reducing the intensity of land use, if the city or county concurrently changes the development standards, policies, and conditions applicable to other parcels within the jurisdiction to ensure that there is no net loss in residential capacity." The project requires a General Plan Amendment to change the land use designation of 9.62 acres of land from CD-VLDR to BP and a Change of Zone to change the Zoning from R-R-1 to IP. The General Plan land use designation of CD-VLDR permits the development up to 1 dwelling units per acre. This indicates that the 9.62 acre project site has an existing residential capacity of 9 dwelling units.

[16] Housing Crisis Act of 2019/SB 330
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=201920200SB330
[17] SB 8 https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220SB8

Due to the required land use changes to implement the proposed project, the site would not be used for the development of 9 dwelling units and replacement sites to accommodate the site's residential capacity must be proposed and analyzed as part of the project. All of the above factors are in conflict with SB 8 that expanded the provisions of the HCA to include Government Code Section 66300 (h)(i)(1) requiring concurrent approval of replacement sites to ensure no net loss in residential capacity, and Section 66300 (h)(2)(A) defining "concurrently" to mean the action is approved at the same meeting of the legislative body. The MND does not act in conformance with these laws and has not identified replacement sites for housing. Approval of the MND and the proposed project will result in a net loss of housing capacity. Specifically, the existing General Plan and Zoning designations permit the development of up to 9 dwelling units and that lost residential capacity is a significant environmental impact in violation of the HCA/SB 330/SB 8. An EIR must be prepared to include a finding of significance due to this inconsistency.

Additionally, deferring the environmental analysis of construction and operation of the replacement sites to a later date is project piecemealing in violation of CEQA. The MND does not accurately or adequately describe the project, meaning "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment" (CEQA § 15378). The whole of the action must statutorily and legally include identification of replacement sites to accommodate at least 9 replacement dwelling units and environmental impacts associated with the construction of the replacement dwelling units.

The MND does not meaningfully discuss the project's required General Plan Amendment and Zone Change applications to allow development of industrial uses on the project site. The site was not anticipated to be developed with industrial development and is therefore not currently accounted for in regional and local plans adopted for purposes of avoiding or mitigating environmental effects, including the AQMP, RTP/SCS, General Plan, and/or the County's Climate Action Plan. An EIR must be prepared to include this information for analysis and include a finding of significance. A finding of significance must also be included because the project is not accounted for in the General Plan growth projections.

The MND also does not provide any information regarding the buildout conditions of the County's General Plan and/or MVAP. Due to the required land use changes from VLDR to BP to accommodate the proposed project, it was not analyzed with the growth projections and buildout scenario included in the General Plan and/or MVAP. The General Plan and MVAP did not analyze the proposed project site as an industrial land use and therefore it is not included in any growth projections or emissions estimates. An EIR must be revised to include a finding of significance.

The MND provides a broad, erroneous, and misleading consistency analysis with the General Plan/Mead Valley Area Plan that excludes specific analysis with the goals and policies of each plan. The MND is inadequate as an informational document and an EIR must be prepared with an accurate consistency analysis with all General Plan and Mead Valley Area Plan goals/policies, including the following:

1. AQ 3.3 Encourage large employers and commercial/industrial complexes to create Transportation Management Associations.
2. AQ 9.2 Attain performance goals and/or VMT reductions which are consistent with SCAG's Growth Management Plan.
3. AQ 17.9 Encourage the installation and use of electric service units at truck stops and distribution centers for heating and cooling truck cabs, and particularly for powering refrigeration trucks in lieu of idling of engines for power.
4. AQ 17.10 Promote and encourage the use of natural gas and electric vehicles in distribution centers.
5. C2.1: LOS C shall apply to all development proposals in any area of the Riverside County not located within the boundaries of an Area Plan, as well those areas located within the following Area Plans: Mead Valley

6. HC 1.1 Foster the overall health and well-being of Riverside County residents, particularly the most vulnerable populations.

7. HC 14.2 When feasible, avoid locating new sources of air pollution near homes and other sensitive receptors.
8. HC 16.15 Assure that site plan design protects people and land, particularly sensitive land uses such as housing and schools, from air pollution and other externalities associated with industrial and warehouse development through the use of barriers, distance, or similar solutions or measures from emission sources when possible.
9. HC 16.18 Promote new development that emphasizes job creation and reduction in vehicle miles traveled in job-poor areas and does not otherwise contribute to onsite emissions in order to improve air quality.
10. HC 16.24 Ensure compatibility between industrial development and agricultural uses and adjacent land uses. To achieve compatibility, industrial development and agricultural uses will be required to include criteria addressing noise, land, traffic and greenhouse gas emissions to avoid or minimize creating adverse conditions for adjacent communities.
11. LU 10.2: Require a fiscal impact analysis for specific plans and major development proposals so as not to have a negative fiscal impact on the County of Riverside.

Additionally, the MND does not discuss the project's compliance with the Business Park land use designation within the General Plan. The Land Use Element[18] of the General Plan states the following regarding the Business Park designation:

"The Business Park land use designation allows for employee-intensive uses, including research and development, technology centers, corporate and support office uses, clean industry and supporting retail uses. Building intensity ranges from 0.25 to 0.6 FAR."

Notably, the Business Park land use designation does not permit warehouses. Warehouses are permitted in the Light Industrial land use designation. The MND excludes for analysis that the project is not permitted by the Business Park land use designation and does not comply with the proposed General Plan land use designation. A finding of significance must be made as part of an EIR.

Population and Housing

The MND does not provide a quantified analysis of the construction workforce generated by the proposed project. An EIR must be prepared that includes an analysis of the construction jobs generated by the project. Additionally, an EIR must also provide demographic and geographic information on the location of qualified workers (for both project operations and construction) to fill these positions in order to provide an accurate environmental analysis.

The MND provides conflicting information regarding the operational jobs created by the proposed project. The Introduction of the MND states that, "Employment estimates calculated using the employment density factors identified in the Southern California Association of Governments (SCAG) Employment Density Study (October 2001), identifies a rate of one employee per 1,195 SF. of building area for industrial warehouse uses results in 156 employees (185,912 SF ÷ 1,195 SF/employee = 156 employees)." The MND states here that, "For the purposes of analysis, the Project is estimated to result in 100 employees." Utilizing 100 employees for purposes of analysis within the MND despite multiple reputable data sources calculating significantly higher operational employees serves to skew impacts downwards in an attempt to present less than significant impacts in the MND. The methodology that must be used to calculate the project's operational employees is the County's General Plan employee generation factor[19] of 1 employee for every 600 square feet of building area for the Business Park land use designation. Utilizing this data source for the methodology results in the following calculation:

185,912 sf / 600 = 310 employees

[18] https://planning.rctlma.org/sites/g/files/aldnop416/files/2024-05/Portals-14-Ch03-Land-Use-2019-28-21_0.pdf
[19] https://planning.rctlma.org/sites/g/files/aldnop416/files/migrated/Portals-14-genplan-general-Plan-2017-appendices-Appendix-E-2-April-2017.pdf

Utilizing the County's General Plan employee generation for the Business Park land use designation, the proposed project will generate 310 employees. The MND utilizes uncertain and misleading language which does not provide any meaningful analysis of the project's population and employment generation. The MND continues by stating that, "The estimated number of employees that would be required for the Project has been estimated for purposes of this analysis at 100 based on actual data from similar facilities operating throughout southern California." The MND does not provide any supporting evidence, counts, or studies of the alleged "actual data from similar facilities operating throughout southern California," that result in the assumption of 100 employees at the proposed project. In order to comply with CEQA's requirements for meaningful disclosure, an EIR must be prepared to provide an accurate estimate of employees generated by all uses of the proposed project by utilizing the County's General Plan employee generation for the Business Park land use designation. It must also provide demographic and geographic information on the location of qualified workers to fill these positions. A construction worker employment analysis must also be included to adequately and accurately analyze all potentially significant environmental impacts.

The MND finds that impacts to population and housing will not be significant without providing any quantified analysis or meaningful evidence to support this conclusion. The MND utilizes additional uncertain and misleading statements in its analysis of the project's workforce in stating that, "The employees that would fill these roles are *anticipated* to reside within *commuting distance* and would not generate needs for any housing." The "commuting distance" of the project site is undefined and relying on the entire labor force within an undefined distance, notably the greater SCAG region, to fill the project's construction and operational jobs will increase rates of VMT and emissions during all phases of construction and operations and an EIR must be prepared to account for longer worker trip distances.

The MND concludes that there is an "average 3.9% unemployment rate in March 2023 for the four communities near the Project Site (Moreno Valley, Nuevo, Perris, and Riverside)," but does not provide any meaningful evidence that the unemployed population is interested in or qualified for work in the industrial sector. The MND also states that, "should the Project require employees to relocate to the area for work, there is sufficient vacant housing available within the *region*, including the Mead Valley area, City of Perris, City of Hemet, City of Moreno Valley and City of Menifee." Relying upon employees within the region will also increase project generated VMT and requires preparation of a revised VMT analysis as part of an EIR. The MND does not provide any meaningful information or analysis to support the conclusion that the project will not necessitate the construction of housing affordable affordable to households earning 80% or less of the County's median income to accommodate Project-related employees.

The MND does not provide any information on the wages generated by the construction or operational jobs in the proposed project. MIT's Living Wage Research Center reports that the living wage for two adults with two children is $32.20 per hour in Riverside County[20]. This is an annual salary of approximately $66,976. The U.S. Bureau of Labor Statistics reports that the mean annual wage in the Riverside - San Bernardino - Ontario metropolitan area for warehouse workers[21] is:

Laborers and Freight, Stock, and Material Movers, Hand: $44,720
Packers and Packagers, Hand: $42,150
Stockers and Order Fillers: $43,530

HCD's area median income (AMI) for a family of four people in Riverside County is $103,900[22]. 80% of the Riverside County AMI is $83,120 and the MND has not demonstrated that the project's construction and/or operational employees will earn an annual salary of at least $83,120. The MND has not provided evidence that the project will pay wages above 80% of the Riverside County AMI and thus not generate a need for affordable housing. An EIR must be prepared which includes this information for analysis in order to provide an adequate and accurate environmental analysis.

Additionally, the MND has not demonstrated that the available housing in the listed jurisdictions is affordable to the project's employees and/or households earning 80 percent or less of the County's median income. An EIR must be prepared with this analysis and discussion in order to provide an accurate and adequate environmental analysis.

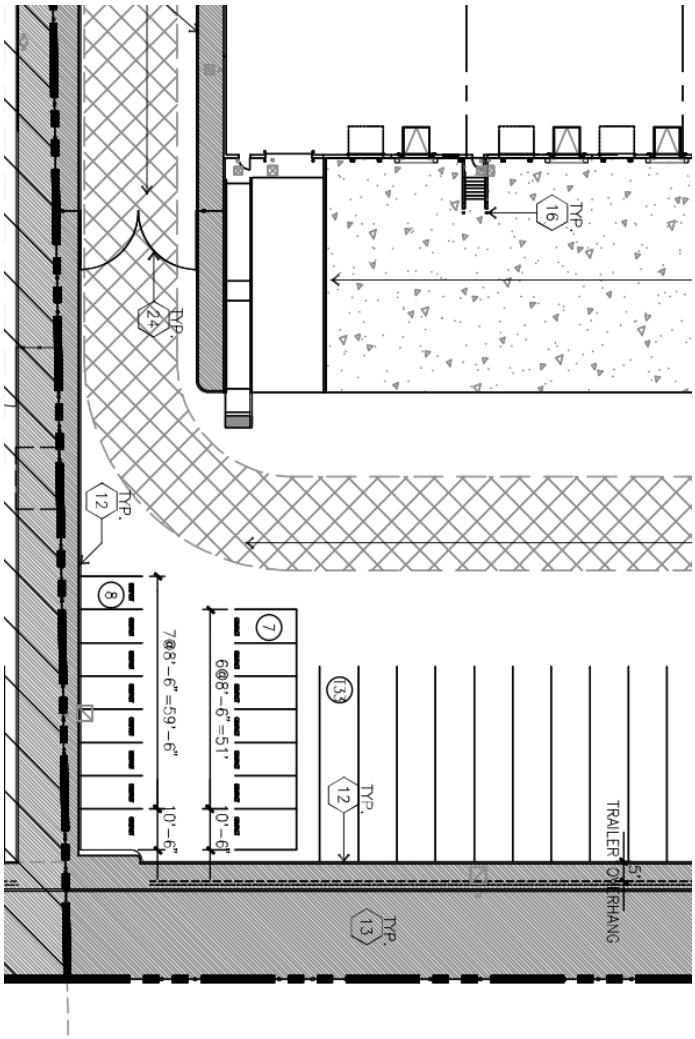
SCAG's Connect SoCal Demographics and Growth Forecast[23] notes that the County will add 27,100 jobs from 2019 to 2035. Based on the County's General Plan employee factor for the Business Park land use designation calculation of 310 jobs, the project represents 1.1% of the County's job growth over 16 years, and is actually a 1.1% increase above this projection as the project requires a GPA and ZC to change the land use from a non-employment generating land use to an employment-generating land use. A single project accounting for this amount of the projected employment growth over 16 years represents a significant amount of growth. The MND has not provided a cumulative analysis discussion of projects approved since 2019 (SCAG),

[20] MIT Living Wage Research Center https://livingwage.mit.edu/counties/06065
[21] U.S. Bureau of Labor Statistics May 2022 Riverside-San Bernardino-Ontario Metropolitan Area Occupational Employment and Wage Estimates https://www.bls.gov/oes/current/oes_40140.htm#53-0000
[22] HCD 2025 Income Limits https://www.hcd.ca.gov/sites/default/files/docs/grants-and-funding/income-limits-2025.pdf
[23] SCAG Connect SoCal Demographics and Growth Forecast https://www.scag.ca.gov/sites/default/files/2024-05/23-2987-tr-demographics-growth-forecast-final-040424.pdf

General Plan adoption, and/or projects "in the pipeline" to determine if the project will exceed SCAG's employment growth forecast or the County's General Plan/Mead Valley Area Plan growth projections.

For example, recent industrial projects within the County including the greater Knox Business Park (piecemealed projects known as Muranaka Warehouse, Diamond Warehouse, Knox Buildings A/C/D/E, and Knox Phase 5) will generate 3,492 employees, Stoneridge Commerce Center[24] (10,256 employees), Seaton and Cajalco Industrial Project[25] (340 employees), Harvill and Rider Industrial[26] (325 employees), Harvill at Water Industrial (423 employees), and Rider Patterson Business Center (574 employees), and piecemealed project Plot Plan No. 2200047 (PPT220047) and Variance #230002[27] (325 employees) combined with the proposed project's 310 employees, these select industrial projects alone will generate 16,045 employees. This represents 59.2% of the County's job growth over 16 years accounted for by only a few recent industrial projects. This total increases exponentially when commercial development activity and other industrial projects are added to the calculation. An EIR must be prepared to include this information for analysis and also include a cumulative development analysis of projects approved since General Plan adoption, 2019 (SCAG), General Plan adoption, and projects "in the pipeline" to determine the County's progress towards General Plan/Mead Valley Area Plan growth estimates and SCAG's growth forecasts.

Additionally, Table 2: Statistical Summary of Mead Valley Area Plan (MVAP) states that the Business Park land use designation will generate 8,563 employees, and the MND has not provided this information for discussion. Since the project requires a GPA/ZC to permit employment-generating uses on the site, the project will exceed the growth planned for by the MVAP and its associated environmental analysis. An EIR must be prepared to include this information for analysis and a finding of significance due to this inconsistency.



Transportation

The VMT analysis has underestimated the significance of the proposed project's VMT generation. The MND has not analyzed the project's truck/trailer/delivery van activity. An EIR must be prepared to include all truck/trailer/delivery van activity for quantified VMT analysis. The operational nature of industrial/warehouse uses involves high rates of truck/trailer/delivery van VMT due to traveling from large import hubs to regional distribution centers to smaller industrial parks and then to their final delivery destinations. Once employees arrive at the warehouses for work, they will conduct their jobs by driving truck/trailer/delivery vans across the region as part

[24] https://ceqanet.opr.ca.gov/2020040325/4
[25] https://ceqanet.opr.ca.gov/2022060441
[26] https://ceqanet.opr.ca.gov/2021080035
[27] https://ceqanet.opr.ca.gov/2024020843

of the daily operations as a warehouse, which will drastically increase project-generated VMT. The project's truck/trailer and delivery van activity is unable to utilize public transit or active transportation and it is misleading to the public and decision makers to exclude this activity from VMT analysis. An EIR must be prepared to reflect a quantified VMT analysis that includes all truck/trailer and delivery van activity.

The MND has not adequately analyzed the project's potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses; or the project's potential to result in inadequate emergency access. There are also no exhibits adequately depicting the onsite turning radius available for trucks maneuvering throughout the site. Notably, the truck/trailer parking stalls are adjacent to the truck court on the east side of the building. Passenger car parking spaces are also located adjacent to the truck/trailer parking stalls within the truck court and are configured in a manner that is not conducive to vehicular maneuvering.

These parking stalls may be in use at any time and further restrict truck/trailer movement, particularly while trucks/trailers attempt to maneuver into a loading dock door. The MND has not analyzed these scenarios for potential conflicts during onsite maneuvering between passenger cars and trucks/trailers. An EIR must be prepared to include a finding of significance due to these significant and unavoidable impacts.

Additionally, the MND has not provided any analysis of the available horizontal and vertical sight distance at the intersection of the project driveways and adjacent streets. Sight distance is the continuous length of street ahead visible to the driver. At unsignalized intersections, corner sight distance must provide a substantially clear line of sight between the driver of the vehicle waiting on the minor road (driveway) and the driver of an approaching vehicle. An EIR must be prepared with this analysis based on the American Association of State Highway and Transportation Officials (AASHTO) Stopping Sight Distance requirements.

Mandatory Findings of Significance

The MND does not adequately discuss or and analyze the commitment of resources is not consistent with regional and local growth forecasts. As noted throughout this comment letter, the project represents a significant amount of growth in the County, and no analysis in context of the General Plan/MVAP buildout analysis scenario has been provided. Due to the required land use changes from MDR to LI to accommodate the proposed project, it was not analyzed with the growth projections and buildout scenario included in the General Plan and/or MVAP. The General Plan and MVAP did not analyze the proposed project site as an industrial land use and therefore it is not included in any growth projections or emissions estimates. An EIR must be prepared to include a finding of significance.

The MND has not adequately analyzed that the project will have impacts which are individually limited, but cumulatively considerable; "Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, other current projects and probable future projects. As noted above, the project is a piecemealed portion of the greater Thrifty Oil development within the County, including at least one known 194,479 square foot industrial building located adjacent to the south of the proposed project site. These two projects will cumulatively generate 380,391 square feet of industrial building area. The MND states here that, “There are no other projects planned for the Project vicinity that would be considered cumulatively considerable.” However, the MND is only analyzing and representing a portion of the overall impacts generated by the overall two building pproject. Bifurcating the environmental analysis of the two buildings serves to skew impacts downwards to achieve less than significant findings, which obfuscates the true incremental effects of the project viewed in connection with the effects of other projects. An EIR must be prepared to include a finding of significance.

The MND also states here that, "The environmental analysis conducted in this Initial Study determined that the Proposed Project is consistent with the County's General Plan land use and zoning projections. The land use has been considered with overall County growth." These statements do not consider the required change in Land Use designation from VLDR to BP in order to accommodate industrial development/employment generating development on the project site. Due to the required land use changes from VLDR to BP to accommodate the proposed project, it was not analyzed with the growth projections and buildout scenario included in the General Plan and/or MVAP. The General Plan and MVAP did not analyze the proposed project site as an industrial land use/employment generating land use and therefore it is not included in any growth projections or emissions estimates. An EIR must be prepared to include a finding of significance.

An EIR must be prepared to include a cumulative analysis discussion here to demonstrate the impact of the proposed project in a cumulative setting. The MND does not discuss or analyze the project will not comply with the General Plan's Land Use Buildout Scenario/MVAP Buildout Scenario due to the required changes in Land Use designation. Also, SCAG's Connect SoCal Demographics and Growth Forecast[28] notes that the County will add 27,100 jobs from 2019 to 2035. Based on the County's General Plan employee factor for the Business Park land use designation calculation of 310 jobs, the project represents 1.1% of the County's job growth over 16 years, and is actually a 1.1% increase above this projection as the project requires a GPA and ZC to change the land use from a non-employment generating land use to an employment-generating land use. A single project accounting for this amount of the projected employment growth over 16 years represents a significant amount of growth.

An EIR must also provide a cumulative analysis discussion of projects approved since 2019 (SCAG), General Plan adoption, and projects "in the pipeline" to determine the County's progress towards SCAG's employment or population growth forecast for the County and/or the County's General Plan growth forecasts. For example, recent industrial projects within the County including the greater Knox Business Park (piecemealed projects known as Muranaka Warehouse, Diamond Warehouse, Knox Buildings A/C/D/E, and Knox Phase 5) will generate 3,492 employees, Stoneridge Commerce Center[29] (10,256 employees), Seaton and Cajalco Industrial Project[30] (340 employees), Harvill and Rider Industrial[31] (325 employees), Harvill at Water Industrial (423 employees), and Rider Patterson Business Center (574 employees), and piecemealed project Plot

[28] SCAG Connect SoCal Demographics and Growth Forecast https://www.scag.ca.gov/sites/default/files/2024-05/23-2987-tr-demographics-growth-forecast-final-040424.pdf

[31] https://ceqanet.opr.ca.gov/2021080035

Plan No. 2200047 (PPT220047) and Variance #230002[32] (325 employees) combined with the proposed project's 310 employees, these select industrial projects alone will generate 16,045 employees. This represents 59.2% of the County's job growth over 16 years accounted for by only a few recent industrial projects. This total increases exponentially when commercial development activity and other industrial projects are added to the calculation. An EIR must be prepared to include this information for analysis and also include a cumulative development analysis of projects approved since General Plan adoption, 2019 (SCAG), General Plan adoption, and projects "in the pipeline" to determine the County's progress towards General Plan/Mead Valley Area Plan growth estimates and SCAG's growth forecasts.

Additionally, Table 2: Statistical Summary of Mead Valley Area Plan (MVAP) states that the Business Park land use designation will generate 8,563 employees, and the MND has not provided this information for discussion. Since the project requires a GPA/ZC to permit employment-generating uses on the site, the project will exceed the growth planned for by the MVAP and its associated environmental analysis. An EIR must be prepared to include this information for analysis and a finding of significance due to this inconsistency.

Conclusion

For the foregoing reasons, GSEJA believes the MND is flawed and an EIR must be prepared for the proposed project and circulated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

Sincerely,

Vashon Simien

Subject: Comments on the Thrifty Oil North Business Center Project (SCH No. 2025050128)

Dear Mr. Ho:

We have reviewed the Initial Study/Mitigated Negative Declaration ("IS/MND") for the Thrifty Oil North Business Center ("Project") located in the County of Riverside ("County"). The Project proposes the construction of a 185,912-square-foot ("SF") concrete tilt-up, non-refrigerated warehouse on a 9.62-acre site.

Our review concludes that the IS/MND fails to sufficiently evaluate the air quality and greenhouse gas ("GHG") impacts. As a result, emissions associated with construction and operation of the proposed Project may be underestimated or unaddressed. An Environmental Impact Report ("EIR") should be prepared to reassess and, if necessary, mitigate the potential air quality and GHG impacts that the Project may have.

Air Quality

Input Parameters Used to Estimate Project Emissions

The IS/MND relies on the California Emissions Estimator Model ("CalEEMod") Version 2022.1 to estimate the Project's air quality emissions (Appendix G-1, p. 21). The construction-related CalEEMod output files, titled "Placentia Avenue (Construction) Detailed Report," are inconsistent with information disclosed in the IS/MND.

The IS/MND's air quality analysis may therefore underestimate criteria air pollutant emissions from Project construction. In our opinion, an EIR should be prepared to include an updated air quality analysis that sufficiently evaluates the impact that Project construction would have on local and regional air quality.

Changes To Individual Construction Phase Lengths

The "Placentia Avenue (Construction) Detailed Report" model includes changes to the default construction schedule (p. 32). As a result of these changes, the model includes the following construction schedule (p. 21):

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Demolition	Demolition	1/7/2025	2/4/2025	5.00	20.0	—
Site Preparation	Site Preparation	2/5/2025	2/19/2025	5.00	10.0	—
Grading	Grading	2/20/2025	3/20/2025	5.00	20.0	—
Building Construction	Building Construction	3/21/2025	2/6/2026	5.00	230	—
Paving	Paving	1/10/2026	2/6/2026	5.00	20.0	—
Architectural Coating	Architectural Coating	1/10/2026	2/6/2026	5.00	20.0	—

The justification provided for these changes is:

> "Construction anticipated to start in Q1 2025 and end Q1 2026" (p. 32).

The IS/MND provides a total construction duration of 12 months. While the Project construction period is justified, the IS/MND and associated appendices do not mention the individual construction phase lengths. As the CalEEMod User's Guide requires any changes to model defaults be justified, we find that the changes to the individual construction phase length lack adequate support.[1] As each construction phase is associated with different emissions activities, altering an individual construction phase length can impact emissions estimates for specific criteria air pollutants.[2]

The "Placentia Avenue (Construction) Detailed Report" model combines the building construction and architectural coating phases; however, this approach lacks adequate justification. The IS/MND indicates that warehouse construction is expected to occur over an 8- to 9-month period and that all components of the building, including painting, will be completed within this timeframe (p. 4). However, neither the IS/MND nor its appendices provide a clear rationale to support the assumption that the architectural coating phase will occur concurrently with the building construction phase. Until these values are estimated and verified, it is our opinion that the model should have included proportionately altered individual phase lengths to match the proposed construction duration of 12 months.[3]

Changes to Architectural Coating Emission Factors

The "Placentia Avenue (Construction) Detailed Report" model includes changes to the default architectural coating emission factors. The justification provided for these changes is:

---

[1] "CalEEMod User's Guide." CAPCOA, May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 1, 14.

[2] "CalEEMod User's Guide." CAPCOA, May 2021, *available at:* https://www.aqmd.gov/caleemod/user's-guide, p. 32.

[3] See SWAPE's CalEEMod in Appendix A for the proportionately altered construction schedule, p. 22.

"SCAQMD Rule 1113" (p. 32)

The IS/MND does not mention South Coast Air Quality Management Districts' ("SCAQMD") Rule 1113, which limits Volatile Organic Compound ("VOC") content in architectural coatings. Rule 1113's Table of Standards specifies VOC limits ranging from 50 g/L to 730 g/L across 57 coating categories.[4] As the IS/MND does not mention Rule 1113 or specify a particular coating type with a defined VOC limit, we are unable to ensure the reliability of the revised emission factors. It is in our opinion that an EIR be prepared and that compliance with Rule 1113 be incorporated into a formal mitigation measure.

Changes to Off-Road Construction Equipment Engine Emission Standards

The "Placentia Avenue (Construction) Detailed Report" model includes changes to the off-road construction equipment input parameters (p. 22). As previously mentioned, the CalEEMod User's Guide requires any changes to model defaults be justified.[5]

The modeling assumes the use of Tier 4 Interim emission standards for construction equipment engines—a key assumption that is not discussed in the IS/MND. The lack of discussion in the IS/MND regarding the inclusion of Tier 4 Interim standards limits the ability of reviewers to fully assess the accuracy and enforceability of the air quality analysis.

We recommend an EIR be prepared so that the use of Tier 4 Interim emission standards for construction equipment engines is formally identified as a mitigation measure within a Mitigation Monitoring and Reporting Program, consistent with guidance from the Association of Environmental Professionals ("AEP") and CEQA requirements for enforceable mitigation.[6]

Updated Analysis Indicates a Potentially Significant Air Quality Impact

We created an updated model to provide an estimate of the Project's construction emissions based upon the Project-specific information provided by the IS/MND and the "Placentia Avenue (Construction) Detailed Report" (See Appendix A). In this model, we proportionately adjusted the individual construction phase lengths to align with the proposed 12-month construction schedule and omitted the unsupported modifications to architectural coating emission factors and the unsubstantiated application of Tier 4 emission standards.[7]

Our updated analysis estimates that the Project's construction-related VOC emissions would exceed the applicable SCAQMD thresholds of 75 pounds per day ("lbs/day") (see table below). [8]

SWAPE Criteria Air Pollutant Emissions	
Construction	**VOC** (lbs/day)
IS/MND	47
SWAPE	104
SCAQMD Threshold	**75**
Exceeds?	**Yes**

According to our updated analysis, the Project's construction-related VOC emissions are estimated at approximately 104 lbs/day, exceeding SCAQMD's significance threshold.[9] This finding indicates a potentially significant air quality impact that the IS/MND did not identify or address. It is our opinion that an EIR should be conducted to reevaluate the Project's potential air quality impacts on the environment.

Greenhouse Gas

Greenhouse Gas Impacts Evaluation

The IS/MND estimates that the Project would generate net annual GHG emissions of 1,827.49 metric tons of carbon dioxide equivalents per year ("MT CO_2e/year") (Table 5, p. 51). Based on this estimate, the IS/MND concludes that the Project would not exceed the Riverside County Climate Action Plan ("CAP") threshold of 3,000 MT CO_2e/year and the emissions would be less than significant (p. 51).

In our opinion, the IS/MND's analysis and the subsequent less-than-significant impact conclusion lack adequate support because the analysis relies upon an outdated threshold.

Reliance on an Outdated Quantitative GHG Threshold

The 3,000 MT CO2e/year threshold used in the Project's GHG analysis is consistent with the CAP threshold. The County's GHG reduction targets are consistent with the guidance established when the Global Warming Solutions Act of 2006, commonly called "AB 32," was the main regulating law for GHG reductions in California, which targeted a return to 1990 GHG levels by 2020.[10] Since then, the regulatory landscape has evolved considerably.

The Association of Environmental Professionals guidance states that California Environmental Quality Act ("CEQA") thresholds need to be updated over time to reflect the state's evolving GHG reduction goals.[11] Relying on a 2020-based threshold in 2025 fails to meet this recommendation. SCAQMD has since developed a service population ("SP")-based efficiency target of 3.0 metric tons of carbon dioxide equivalents per service population per year ("MT CO_2e/SP/year"), derived by applying a 40 percent

[9] See Appendix A for CalEEMod output files.
[10] "Health & Safety Code 38550." California State Legislature, January 2006, *available at:* https://leginfo.legislature.ca.gov/faces/codes_displaySection.xhtml?lawCode=HSC&sectionNum=38550.
[11] "Beyond Newhall and 2020: A Field Guide to New CEQA Greenhouse Gas Thresholds and Climate Action Plan Targets for California." Association of Environmental Professionals, October 2016, *available at:* https://califaep.org/docs/AEP-2016_Final_White_Paper.pdf, p. 39.

reduction to the original 2020 efficiency target.[12] This updated threshold reflects California's 2035 goals and is more appropriate.

The Project's reliance on the 3,000 MT CO_2e/year CAP threshold may be unjustified and does not support a less-than-significant impact finding under CEQA. Instead, the 3.0 MT CO_2e/SP/year efficiency threshold could have been applied, as it aligns with current climate policy and SCAQMD guidance.

Potential Significant GHG Impact

We compared the Project's estimated GHG emissions to the SCAQMD 2035 efficiency target of 3.0 MT CO_2e/SP/year to assess the Project's potential contribution to global climate change. According to California Air Pollution Control Officers Association's *CEQA & Climate Change* report, a service population is defined as "the sum of the number of residents and the number of jobs supported by the project."[13] The IS/MND states that the Project is expected to support about 100 full time jobs, and does not mention any future residents (p. 4).

When dividing the Project's net annual GHG emissions, as estimated by the IS/MND, by a SP of 100 people, the Project is estimated to emit approximately 18.3 MT CO_2e/SP/year (see table below).[14]

Project Greenhouse Gas Emissions	
Annual Emissions (MT CO_2e/year)	1827.49
Service Population	100
Service Population Efficiency (MT CO_2e/SP/year)	18.3
SCAQMD 2035 Target	**3.0**
Exceeds?	***Yes***

The Project's service population efficiency value exceeds the SCAQMD 2035 efficiency target of 3.0 MT CO_2e/SP/year, indicating a potentially significant impact not previously identified or addressed by the IS/MND. An EIR should be prepared that includes an updated GHG analysis and, if necessary, additional mitigation measures to reduce the Project's GHG emissions to less-than-significant levels.

Mitigation

Feasible Mitigation Measures Available to Reduce Emissions

CEQA Guidelines Section 15096(g)(2) recommends that a responsible agency implement all feasible mitigation measures to reduce potential impacts to the greatest extent possible. As demonstrated in the

[12] "Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #15." SCAQMD, September 2010, *available at:* http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-minutes.pdf, p. 2.
[13] "CEQA & Climate Change." California Air Pollution Control Officers Association, January 2008, *available at:* https://www.ourair.org/wp-content/uploads/CAPCOA-CEQA-and-Climate-Change.pdf, p. 71-72.
[14] *Calculated:* (3,795.9 MT CO_2e/year) / (70 service population) = (54.2 MT CO_2e/SP/year).

sections above, the Project may result in potentially significant air quality and GHG impacts that should be mitigated further.

To reduce the VOC emissions associated with Project construction, we recommend the IS/MND consider incorporating the following mitigation measure from the California Department of Justice ("CA DOJ"):[15]

- Require the use of super compliant, low-VOC paints less than 10 g/L during the architectural coating construction phase and during Project maintenance.

To reduce construction VOC emissions, the California Department of Public Health ("CDPH") recommends the use of:[16]

- Natural materials such as solid wood products (e.g., hard wood flooring and wood paneling), natural stone (e.g., granite and marble), ceramic tile, and glass.
- Composite wood products that comply with the California Air Resources Board's Airborne Toxic Control Measure for formaldehyde.
- Flooring materials that are certified as low emitting under the CDPH Standard Method v1.2 or equivalent.
- Sealer on the surface of spray-on fireproofing to reduce adsorption of VOCs using a low-VOC sealer, if necessary.

To reduce the GHG emissions associated with the Project, we recommend several mitigation measures.

The CA DOJ recommends: [17]

- Installing solar photovoltaic systems on the project site of a specified electrical generation capacity that is equal to or greater than the building's projected energy needs, including all electrical chargers.
- Requiring all stand-by emergency generators to be powered by a non-diesel fuel.
- Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.

California Department of Public Health, July 1996, *available at*: https://www.cdph.ca.gov/Programs/CCDPHP/DEODC/EHLB/IAQ/CDPH%20Document%20Library/reducing_occupant_exposure_vocs_guidelines_ADA.pdf.
[17] "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act." State of California Department of Justice, September 2022, *available at*: https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf, p. 8 – 10.

SCAQMD staff recommends: [18]

- Utilizing only Energy Star heating, cooling, and lighting devices and appliances.

The measures provided above offer feasible ways to incorporate lower-emitting design features into the proposed Project to reduce VOC and GHG emissions released during construction. We recommend that an EIR be prepared that includes all feasible mitigation measures, as well as an updated GHG analysis to ensure that any necessary mitigation measures are implemented to minimize emissions to the maximum extent feasible.

Disclaimer

SWAPE has received limited documentation regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

Sincerely,

Matt Hagemann, P.G., C.Hg.

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	29.1	annual days of extreme heat
Extreme Precipitation	1.95	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth

Wildfire	6.36	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	4	1	1	4
Extreme Precipitation	N/A	N/A	N/A	N/A

Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	95.3
AQ-PM	55.1
AQ-DPM	13.9
Drinking Water	10.2
Lead Risk Housing	54.6
Pesticides	52.5
Toxic Releases	43.8
Traffic	90.2
Effect Indicators	—
CleanUp Sites	60.4

Groundwater	14.3
Haz Waste Facilities/Generators	70.9
Impaired Water Bodies	0.00
Solid Waste	0.00
Sensitive Population	—
Asthma	66.5
Cardio-vascular	91.0
Low Birth Weights	49.3
Socioeconomic Factor Indicators	—
Education	93.2
Housing	80.1
Linguistic	84.3
Poverty	84.1
Unemployment	93.1

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	8.712947517
Employed	6.274862056
Median HI	6.826639292
Education	—
Bachelor's or higher	1.860644168

2016 Voting	13.0

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	81.0
Healthy Places Index Score for Project Location (b)	5.00
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Consistent with the "Placentia Avenue (Construction) Detailed Report" model.
Construction: Construction Phases	See our comments on "Changes to Individual Construction Phase Lengths" and "Changes to Architectural Coating Emission Factors."
Construction: Dust From Material Movement	Consistent with the "Placentia Avenue (Construction) Detailed Report" model.
Construction: Trips and VMT	Consistent with the "Placentia Avenue (Construction) Detailed Report" model.
Construction: Off-Road Equipment	Consistent with the "Placentia Avenue (Construction) Detailed Report" model. See our comment on "Changes to Off-Road Construction Equipment Engine Emission Standards."

mhagemann@swape.com

Matthew F. Hagemann, P.G., C.Hg.

- **Geologic and Hydrogeologic Characterization, Investigation and Remediation Strategies**
- **Industrial Stormwater Compliance**
- **CEQA Review**
- **Expert Testimony**

Professional Certifications:
California Professional Geologist, P.G.
California Certified Hydrogeologist, C.Hg.

Education:
M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Experience:
30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. Spent nine years with the U.S. EPA in the Resource Conservation Recovery Act (RCRA) and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where I identified emerging threats to groundwater. While with EPA, I served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. Led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, I developed extensive client relationships and has managed complex projects that include consultations as an expert witness and a regulatory specialist, and managing projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions held include:

Government:
Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);

Geologist, U.S. Forest Service (1986 – 1998).

Educational:
Geology Instructor, Golden West College, 2010 – 2104, 2017;
Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
Instructor, College of Marin, Department of Science (1990 – 1995).

Private Sector:
Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);
Executive Director, Orange Coast Watch (2001 – 2004);
Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, responsibilities have included:

- Lead analyst and testifying expert, for both plaintiffs and defendants, in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards.
- Recommending additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce exposure to hazards from toxins.
- Stormwater analysis, sampling and best management practice evaluation, for both government agencies and corporate clients, at more than 150 industrial facilities.
- Serving as expert witness for both plaintiffs and defendants in cases including contamination of groundwater, CERCLAcompliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns, for both government agencies and corporate clients.
- Lead analyst and testifying expert in the review of environmental issues in license applicationsfor large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony

against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.
- Lead author for a multi-volume remedial investigation report for an operating school in LosAngeles that met strict Sate of California regulatory requirements.
- Development of strategic approaches for cleanup of contaminated sites in consultation withclients and regulators.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities included:

- Leading efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiating a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identifying emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. Used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. Prepared geologic reports, conducted hearings, and responded to public comments from residents who were very concerned about the impact of designation.
- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Served as a hydrogeologist with the RCRA Hazardous Waste program. Duties included:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliancewith Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S.EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexicoand advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation- wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served as senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advising the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinkingwater supplies.
- Shaping EPA's national response to these threats by serving on workgroups and by contributingto guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improving the technical training of EPA's scientific and engineering staff.
- Earning an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Establishing national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities included:

- Mapping geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinating research with community stakeholders who were concerned with natural resource protection.
- Characterizing the geology of an aquifer that serves as the sole source of drinking water for thecity of Medford, Oregon.

As a consultant with Dames and Moore, led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large RCRA hazardous waste site in eastern Oregon.

Duties included the following:

- Supervising year-long effort for soil and groundwater sampling.
- Conducting aquifer tests.
- Investigating active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.
- Part time geology instructor at Golden West College in Huntington Beach, California from 2010 to 2014 and in 2017.

Summary of Testimony Experience Over Past Four Years

In Re New Jersey Department of Environmental Protection et al. vs. E.I. DuPont de Nemours and Company, in the United States District Court, District of New Jersey, Civil Action No. 1:19-cv-14766-RMB-JBC. Deposition in 2025. Representing Plaintiffs in matters regarding contamination of groundwater, wastewater, soil, and air with per- and poly-fluoroalkyl substances.

In Re Edmond Asher, et al., vs. RTX Corporation (f/k/a Raytheon Technologies Corporation, et al.) in the County of Huntington Superior Court, Indiana, Cause number 35D01-2006-CT-000338. Deposition in 2024. Representing Plaintiffs in matters regarding contamination of groundwater and soil vapor with trichlorethylene.

In Re Wright vs Consolidated Rail Corporation In the Circuit Court of Cook County, Illinois, Case No: 21L3966. Deposition in 2023, Representing Plaintiff in matters involving groundwater and drinking water contamination of perchloroethylene, trichlorethylene, 1,2-dichloroethane, and carbon tetrachloride.

In Re Behr Dayton Thermal Products LLC In the United States District Court for the Southern District of Ohio Western Division at Dayton, Case No: 08-cv-326. Deposition in 2022. Representing Plaintiff in matters regarding contamination of groundwater and indoor air with perchloroethylene and trichloethelene.

Orange County Water District vs. Sabic Innovative Plastics US, LLC, et al. In the Court of Appeal, Fourth District, Division 1, California, Case No: D070553. Deposition in 2020. Representing Plaintiff in matters involving compliance with The Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Los Angeles Waterkeeper vs. AAA Plating and Inspection, Inc. In the United States District Court for the Central District of California, Case No: No. CV 18-5916 PA (GJSx). Deposition in 2019. Expert witness representing Plaintiff in matters involving contaminated stormwater runoff at an industrial facility in Compton, California.

Californians for Alternatives to Toxics vs. Schneider Dock and Intermodal Facility. In the United States District Court for the Northern District of California, Case No: 3:17-cv-05287-JST. Deposition in 2019. Expert witness representing Plaintiff in matters involving contaminated stormwater runoff at an industrial facility in Eureka, California.

Bells et al. vs. The 3M Company et al. In the United States District Court for the District of Colorado, Case No: 1:16-CV-02531-RBJ. Deposition in 2018. Expert witness representing Plaintiff on matters regarding the general hydrogeological conditions present in an area impacted by per- and poly-fluoroalkyl substances.

Ungar vs. Foundation for Affordable Housing. In the Superior Court, State of California, Los Angeles County, Case No. BC628890 Deposition in 2017. Expert witness representing defendant on matters involving alleged drinking water contamination.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S.EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making andPublic Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins atschools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBEReleases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells.
Presentation to the Ground Water and Environmental Law Conference, National GroundwaterAssociation.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Waterin

Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Waterin the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to atribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to ameeting of tribal representatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking WaterSupplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant.Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting ofthe National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to ameeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to AddressImpacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater(and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA andState Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublishedreport.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground StorageTanks. Unpublished report.

Hagemann, M.F., and VanMouwerik, M., 1999. Potential Water Concerns Related to Snowmobile Usage.

Water Resources Division, National Park Service, Technical Report.

VanMouwerik, M. and **Hagemann, M.F**. 1999, Water Quality Concerns Related to Personal WatercraftUsage. Water Resources Division, National Park Service, Technical Report.

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. The course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate the effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate the effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate the effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Subject: Technical Data Request: Proposed Thrifty Oil North Business Center Project

CAUTION: This email originated externally from the **Riverside County** email system. **DO NOT** click links or open attachments unless you recognize the sender and know the content is safe.

Dear Krista Mason,

South Coast AQMD staff received the Notice of Intent to Adopt a Negative Declaration (NOI/ND) for the **Proposed Thrifty Oil North Business Center Project** (South Coast AQMD Control Number: RVC250507-03). Staff is currently in the process of reviewing the NOI/ND. According to the NOI/MND, the public comment period is from 05/02/2025 -05/21/2025.

Upon review of the files provided as part of the public review period, I was able to access the NOI/ND and Appendices via the County's website.

Please provide an electronic copy of any live modeling and emission calculation files (complete data files, not summaries) that were used to quantify the air quality impacts from construction and/or operation of the Proposed Project as applicable, including the following:

- CalEEMod Input Files (.csv and .json files);
- Live EMFAC output files;
- Any emission calculation file(s) (live version of excel file(s); no PDF) used to calculate the Project's emission sources (i.e. truck operations);
- AERMOD Input and Output files, including AERMOD View file(s) (.isc);
- HARP Input and Output files and/or cancer risk calculation files (live version of excel file(s); no PDF) used to calculate cancer risk, and chronic and acute hazards from the Project;
- Any other files related to post-processing done outside of AERMOD to calculate pollutant-specific concentrations (if applicable).

You may send the above-mentioned files via a Dropbox link in which they may be accessed and downloaded by South Coast AQMD staff by **05/19/2025**. Without all files and supporting documentation, South Coast AQMD staff will be unable to complete a review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.

Thank you for your assistance. If you have any questions regarding this request, please feel free to contact me.

Re: Thrifty Oil North Business Center MND (SCH #2025050128)

Dear Krista Mason,

This letter is being written on behalf of the Center for Community Action and Environmental Justice (CCAEJ) in response to the Mitigated Negative Declaration for the proposed Thrifty Oil North Business Center (SCH #2025050128) which has been proposed for construction in the Mead Valley area of Riverside County. After reviewing the MND document, there are a handful of questions and concerns which we would like to ensure are addressed before final construction occurs.

We are heartened to see that the Project endeavors to comply with the requirements of AB98 (Carillo, 2024) and will incorporate the necessary elements to qualify for the 21st Century Warehouse. Additionally, the proposed size of nearly 186,000 square feet will mean that it is large enough to be covered by the South Coast Air Quality Management District's Rule 2305: indirect sources rule for warehouses. We hope that following the law and including these elements from the beginning will be enough to ward off the worst outcomes that have otherwise been all too common an affliction for communities where warehouses have been placed.

Nevertheless, there are some lingering issues that are presented with the Project as proposed. The primary concern is for the change of zoning. Though it does not appear that the Project would actually remove any homes, it is stated that it will involve a rezone from the current Rural Residential zoning to Industrial Park. This is a substantial shift in land uses, all being undertaken less than a decade from when the Mead Valley Area Plan was published, including input from public engagement at the time. It is concerning to see these changes being made at this junction without more public participation as the community members remain very invested in the future of Mead Valley and maintaining it as a haven for those seeking a quieter pace of life. While it is understandable that eventually some things might change, it would be preferable to have far more public input on the process.

An additional point to consider is that of access to the Project by bicycles. We would strongly recommend the use of the Association of Pedestrian and Bicycle Professionals' bike parking standards[1] to provide the proper bike parking at the site. Similarly, the fact that the Project will be constructing new road infrastructure presents an opportunity to ensure that it uses the best designs for bicycle facilities such as those detailed in the Caltrans contextual guidance[2] from the beginning—crucial for smoothing compliance with SB932 (Portantino, 2022).

Thank you for your time and consideration on this matter. If there are any questions, please do not hesitate to reach out.

Sincerely,

Marven E. Norman
Environmental Policy Analyst

CC: Inland Empire Biking Alliance

CCAEJ is a long-standing community based organization with over 40 years of experience advocating for stronger regulations through strategic campaigns and building a base of community power. Most notably, CCAEJ's founder Penny Newman won a landmark federal case against Stringfellow Construction which resulted in the 'Stringfellow Acid Pits' being declared one of the first Superfund sites in the nation. ***CCAEJ*** prioritizes community voices as we continue our grassroots efforts to bring lasting environmental justice to the Inland Valley Region.

P.O. Box #1409: Riverside, Ca. 92502
-1409

PLEASE be advised of my 110% support for STEPHANE WANCHEL and ORDEN CO project.

We need good paying jobs here in MEAD VALLEY.

My family has lived in MEAD VALLEY since 1958.

We CANNOT stop good positive progress..!

Alot of VETERANS can find jobs here.

Thank you for considering my input.

Best wishes

RE: **Public comment for Thrifty Oil North Business Center – SCH# 2025050128 Mitigated Negative Declaration**

Dear Ms. Mason,

Thank you for the opportunity to provide comments on the Mitigated Negative Declaration (MND) on the Thrifty Oil North Business Center – SCH # 2025050128. We apologize for commenting outside of the official comment period but did not receive notification on this project MND being released despite commenting on it verbally and in writing to the County throughout the foundation general plan amendment process in 2024. Please notify us of any future hearing notices or project updates.

The Project aims to construct a 185,912 sq.ft. speculative warehouse on the southeast corner of Placentia Avenue and Tobacco Road in Mead Valley. This action requires a Foundation General Plan Amendment from Rural Community – Very Low Density Residential to Community Development – Business Park and a rezone from rural Residential 1-acre (R-R-1) to Industrial Park (I-P).

The property has single family homes due West and the future Mead Valley Wellness Village due east, which includes a wellness and education center, children and youth crisis residential program, urgent care facility, transitional housing, and mental health rehab inpatient facility – with a total of 522 beds. The project is in an 81st percentile environmental justice census tract 06065042904. The project consists of discretionary actions for multiple changes to amend the general plan and zoning to accommodate the more intense industrial development than the existing Mead Valley Area Plan contemplated.

In our review, the Sierra Club Box Springs Group found the Project MND deficient in multiple areas. A summary is listed here, with detailed information in the body of the letter supporting each claim.

1. The County did not discuss or perform a Cumulative Impacts Analysis as required under CEQA for traffic, land use, housing, air quality, and environmental justice. CEQA guidelines.

§ 15355 defines cumulative impacts as two or more individual effects which, when considered together, are considerable or which compound or increase other impacts. The individual effects may be changes from several separate projects. The cumulative impact from several projects are the incremental impact to other closely related past, present, and reasonably foreseeable future projects. Mead Valley is already the most burdened community in the Inland Empire (see **Figure 1**). A reasonable list of projects to include that are 'cumulatively considerable' and 'reasonably foreseeable' within 2 miles of the project include:

a. Harvest Landing (SCH# 2024080337) – 288 acres of warehouses
b. Cajalco Commerce Center (SCH# 2023060799) and GPA 240005 – Rezone 50 acres from VLDR to Light Industrial
c. Ramona Gateway (SCH #2022040023) – Approved 47 acre warehouse project
d. Rider and Patterson Business Center (SCH#2022120110) – Approved 37 acre warehouse project
e. Harvill at Water Industrial (SCH #2022050490) – approved 20 acre warehouse project
f. Seaton Ave and Cajalco Rd Industrial project (SCH # 2022060441) – approved 17 acre warehouse project
g. BCI IV Harvill Industrial Center (SCH #2023030724) – approved 9 acre warehouse project
h. Patterson and Harvill Business Center (SCH #2024101276) – approved 5 acre warehouse project
i. GPA 240049 – Rezone 18 acres from VLDR to Business Park
j. GPA 240063 – Rezone 58 acres from VLDR to Business Park
k. GPA 240026 – Rezone 162 acres from Rural Residential to Light Industrial
l. GPA 240082 – Rezone 15 acres from VLDR to Light Industrial
m. GPA 240042 – Rezone 17 acres from VLDR to Business Park
n. GPA 240012 – Rezone 9.5 acres from VLDR to Light Industrial
o. GPA 240022 – Rezone 321.1 acres from Rural residential to Specific Plan
p. GPA 240027 – Rezone 10.5 acres from VLDR to Light Industrial
q. GPA 240004 – Rezone 19.5 acres from VLDR to Light Industrial
r. GPA 240059 – Rezone 8.5 acres from VLDR to Light Industrial

2. The circulation for the proposed project provides truck access on Placentia Avenue with an overflow truck entrance on Tobacco Road. Tobacco Road is not a designated truck route and does not meet truck route requirements established under Assembly Bill 98 and encoded in 65098.2.7(b) to minimize adverse impacts on residential communities and enhance transportation efficiency. Placentia Avenue is the only local road that meets those requirements. Since the site is NOT in an existing industrial zone, and a traffic analysis has not been completed, a waiver cannot be granted.
3. The project claims it is not located within any special hazard zone on p. 7 and p. 94 of the MND. This is false as the property was designated a very high fire hazard severity zone in the state local responsibility map released in March 2025 available on the Riverside County Fire

website[1]. The project needs to be analyzed for compliance with Very High Fire Hazard Severity Zone areas, construction, and circulation and reviewed by the County Fire Marshall. Mitigation of construction, materials, and landscaping may be required.

4. The project asserts that the "Healthy Communities" element of the General Plan is not applicable as it is a 'warehouse within an industrial area'. It fails to acknowledge the harmful impacts of industrial land use on adjacent parcels and specifically does not analyze for the impacts on vulnerable populations at the Wellness Center to the east which will be completely surrounded by warehouse land uses and a busy freeway full of diesel trucks. Most absurdly, the dock doors, trailer parking, and truck access driveway is adjacent to the transition housing and urgent care facility buildings to the east of the project and no receptors were designated on that site for the air quality impact analysis on p. 32. This is clearly a result of the County failing to mandate a cumulative impact analysis to ensure adjacent compatibility. This is especially problematic since the current land use is very low density residential – this site is being rezoned to be industrial. Moreover, community members in Mead Valley and in adjacent communities made public comment at Municipal Advisory Council, Planning Director Hearing meetings, Planning Commission meetings, and Board of Supervisor hearings on this project, in addition to submitting written comment. The community engagement component of 'Healthy Communities' within the General Plan is ignored and omitted.
5. Table 3 and Table 4 omit adjacent warehouse projects to assess whether these effects are cumulatively considerable for localized significance. Given the hundreds of acres of adjacent rezones and the 10s of millions of square feet of approved warehouses under construction, these affects are clearly significant and above localized significance thresholds when considering the cumulatively considerable impacts of trucks from the sum total of reasonably foreseeable projects. Please justify omitting the dozens of other in development warehouses around the project from this analysis.
6. A foundation component change requires providing findings pursuant to County Ordinance 348, Article II Section 2.4. These findings are not provided in the MND on why this project is consistent with the County Vision, is not determinantal to the Mead Valley Area Plan, and what unanticipated changes have occurred that require an industrial upzone.

[1] https://www.rvcfire.org/our-departments/fire-marshal/FHSZ-map

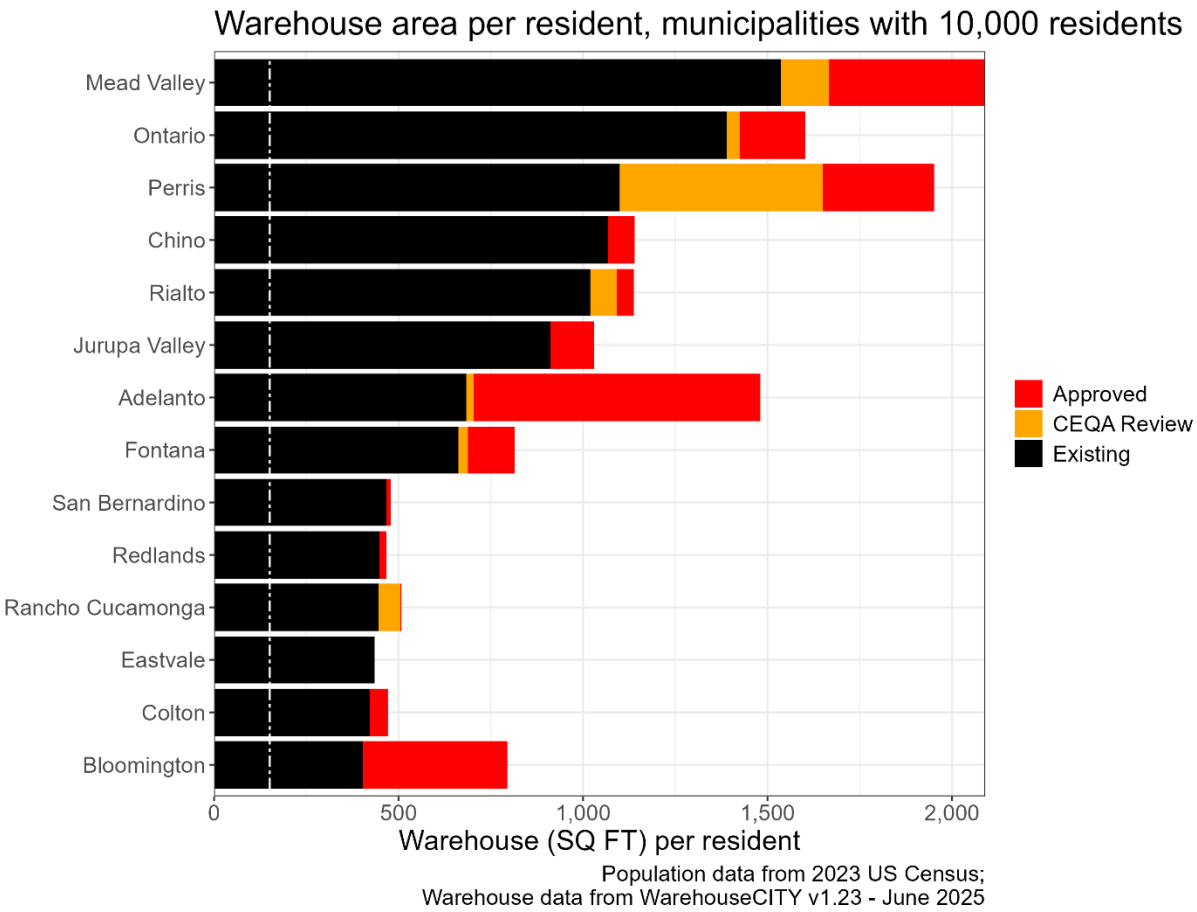

Figure 1. Per capita warehouse area (sq ft) for Inland Empire cities and census designated places. Note, this does not include about 1,000 acres of the planned FGPA projects.

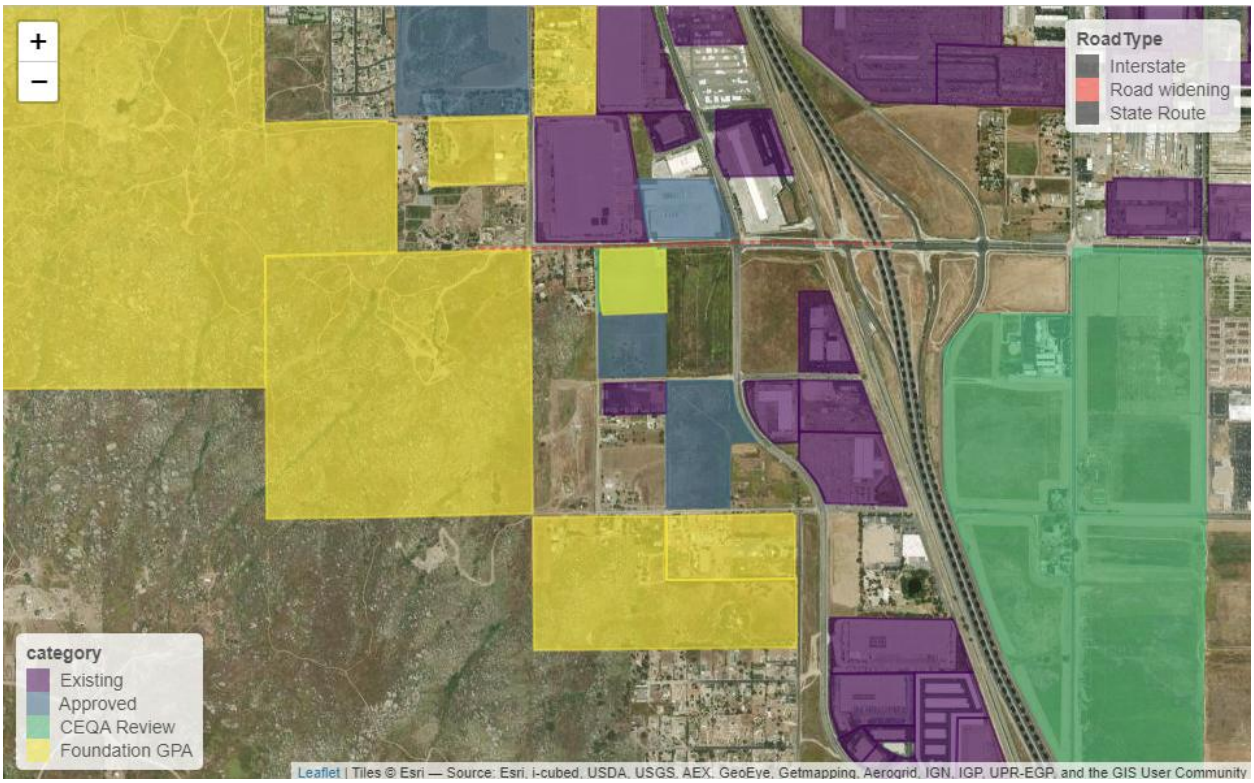

Figure 2. Existing, approved, and proposed warehouse land uses surrounding the project site.

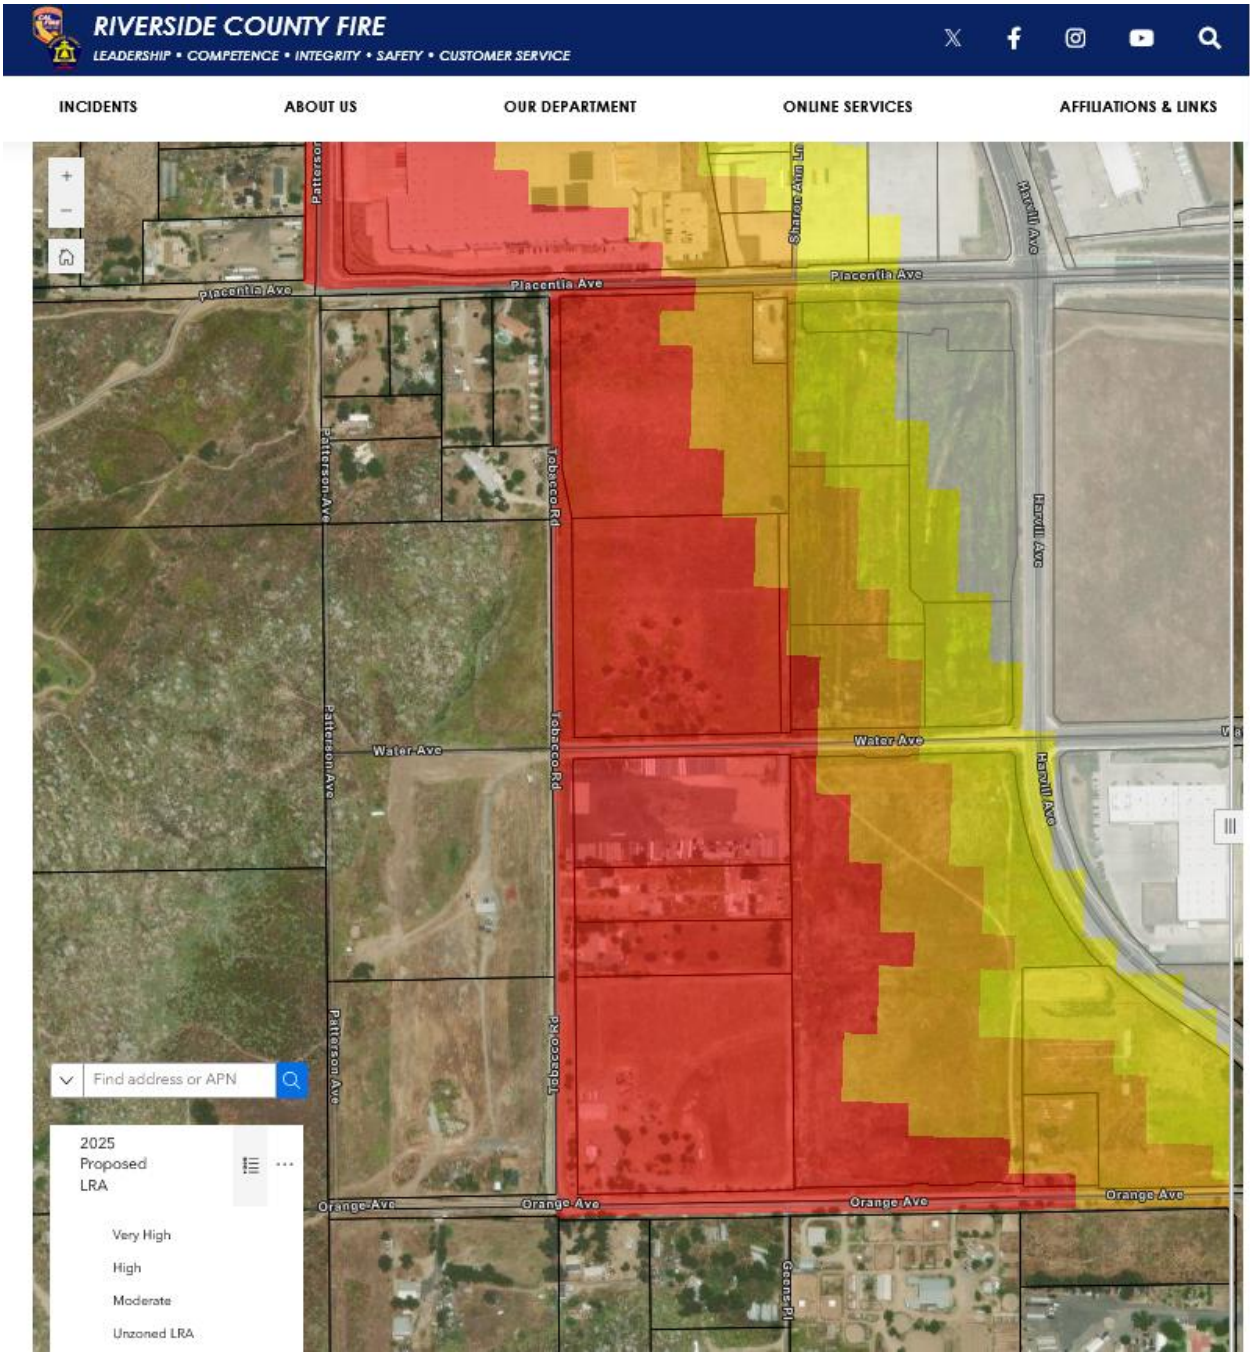

Figure 3. Screenshot of Riverside County Fire Marshall Local Responsibility Area fire hazard severity map. The project is located in a very high fire hazard severity zone as of March 2025 and should be analyzed for full compliance.

Thank you for your attention to these issues.

RE: AIRPORT LAND USE COMMISSION (ALUC) DEVELOPMENT REVIEW

File No.:	ZAP1629MA24
Related File No.:	CZ2300030 (Change of Zone), PP230048 (Plot Plan)
Compatibility Zone:	Zone C2
APNs:	317-260-017, 317-260-018

Dear Ms. Mason:

On January 9, 2025, the Riverside County Airport Land Use Commission (ALUC) found County of Riverside Case Nos. CZ2300030 (Change of Zone), PP230048 (Plot Plan), a proposal to construct a 185,912 square foot manufacturing building with office space on 9.89 acres, located on southerly of Placentia Street, easterly of Patterson Avenue, and westerly of Tobacco Road and also proposing to construct 151,440 square foot photovoltaic (PV) panel structures located on the rooftop of the proposed industrial building and eight Carport sunshades totaling 22,060 square feet located on the parking lot, and change the sites zoning from Rural Residential (R-R) to Industrial Park (IP), **CONSISTENT** with the 2014 March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan, subject to the following conditions:

CONDITIONS:

1. Any outdoor lighting installed shall be hooded or shielded so as to prevent either the spillage of lumens or reflection into the sky. Outdoor lighting shall be downward facing.

2. The following uses/activities are not included in the proposed project and shall be prohibited at this site.

   (a) Any use which would direct a steady light or flashing light of red, white, green, or amber colors associated with airport operations toward an aircraft engaged in an initial straight or circling climb following takeoff or toward an aircraft engaged in a straight or circling final approach toward a landing at an airport, other than a DoD or FAA-approved navigational signal light or visual approach slope indicator.

   (b) Any use which would cause sunlight to be reflected towards an aircraft engaged in an initial straight climb following takeoff or towards an aircraft engaged in a straight final approach towards a landing at an airport to the extent as to result in a potential for temporary after-image greater than the low (“green”) level.

   (c) Any use which would generate smoke or water vapor or which would attract large concentrations of birds, or which may otherwise affect safe air navigation within the area. (Such uses include landscaping utilizing water features, aquaculture, production of cereal grains, sunflower, and row crops, composting operations, wastewater management facilities, artificial marshes, trash transfer

stations that are open on one or more sides, recycling centers containing putrescible wastes, construction and demolition debris facilities, fly ash disposal, and incinerators.)

(d) Any use which would generate electrical interference that may be detrimental to the operation of aircraft and/or aircraft instrumentation.

(e) Highly noise-sensitive outdoor nonresidential uses. Examples of noise-sensitive outdoor nonresidential uses that are prohibited include, but are not limited to, major spectator-oriented sports stadiums, amphitheaters, concert halls and drive-in theaters.

(f) Hazards to Flight.

3. The attached notice shall be provided to all prospective purchasers of the property and tenants of the building, and shall be recorded as a deed notice.

4. Any proposed stormwater basins or facilities shall be designed and maintained to provide for a maximum 48-hour detention period following the design storm, and remain totally dry between rainfalls. Vegetation in and around the stormwater basins that would provide food or cover for birds would be incompatible with airport operations and shall not be utilized in project landscaping. Trees shall be spaced so as to prevent large expanses of contiguous canopy, when mature. Landscaping in and around the stormwater basin(s) shall not include trees or shrubs that produce seeds, fruits, or berries.

5. Landscaping in the stormwater basin, if not rip-rap, should be in accordance with the guidance provided in ALUC "LANDSCAPING NEAR AIRPORTS" brochure, and the "AIRPORTS, WILDLIFE AND STORMWATER MANAGEMENT" brochure available at RCALUC.ORG which list acceptable plants from Riverside County Landscaping Guide or other alternative landscaping as may be recommended by a qualified wildlife hazard biologist.

   A notice sign, in a form similar to that attached hereto, shall be permanently affixed to the stormwater basin with the following language: "There is an airport nearby. This stormwater basin is designed to hold stormwater for only 48 hours and not attract birds. Proper maintenance is necessary to avoid bird strikes". The sign will also include the name, telephone number or other contact information of the person or entity responsible to monitor the stormwater basin

6. March Air Reserve Base must be notified of any land use having an electromagnetic radiation component to assess whether a potential conflict with Air Base radio communications could result. Sources of electromagnetic radiation include radio wave transmission in conjunction with remote equipment inclusive of irrigation controllers, access gates, etc.

7. All solar arrays installed on the project site shall consist of smooth glass photovoltaic solar panels without anti-reflective coating, a fixed tilt of 10 degrees and orientation of 180 degrees. Solar panels shall be limited to a total of 151,440 square feet of solar panels on the proposed building rooftop and the eight Carport sunshades totaling 22,060 square feet, and the locations and coordinates shall be as specified in the glare study. Any deviation from these specifications (other than reduction in square footage of panels), including change in orientation, shall require a new solar glare analysis to ensure that the amended project does not result in any glare impacting the air traffic

control tower or creation of any “yellow” or “red” level glare in the flight paths, and shall require a new hearing by the Airport Land Use Commission.

8. In the event that any glint, glare, or flash affecting the safety of air navigation occurs as a result of project operation, upon notification to the airport operator of an event, the airport operator shall notify the project operator in writing. Within 30 days of written notice, the project operator shall be required to promptly take all measures necessary to eliminate such glint, glare, or flash. An “event” includes any situation that results in an accident, incident, “near-miss,” or specific safety complaint regarding an in-flight experience to the airport operator or to federal, state, or county authorities responsible for the safety of air navigation. The project operator shall work with the airport operator to prevent recurrence of the incidence. Suggested measures may include, but are not limited to, changing the orientation and/or tilt of the source, covering the source at the time of day when events of glare occur, or wholly removing the source to diminish or eliminate the source of the glint, glare, or flash. For each such event made known to the project operator, the necessary remediation shall only be considered to have been fulfilled when the airport operator states in writing that the situation has been remediated to the airport operator’s satisfaction.

9. In the event that any electrical interference affecting the safety of air navigation occurs as a result of project operation, upon notification to the airport operator of an event, the airport operator shall notify the project operator in writing. Within 30 days of written notice, the project operator shall be required to promptly take all measures necessary to eliminate such interference. An “event” includes any situation that results in an accident, incident, “near-miss,” report by airport personnel, or specific safety complaint to the airport operator or to federal, state, or county authorities responsible for the safety of air navigation. The project operator shall work with the airport operator to prevent recurrence of the event. For each such event made known to the project operator, the necessary remediation shall only be considered to have been fulfilled when the airport operator states in writing that the situation has been remediated to the airport operator’s satisfaction.

10. The project has been evaluated to construct a 185,912 square foot manufacturing building with office space on 9.89 acres, 151,440 square foot photovoltaic (PV) panel structures located on the rooftop of the proposed industrial building and eight Carport sunshades totaling 22,060 square feet located on the parking lot, and also proposes to change the sites zoning from Rural Residential (R-R) to Industrial Park (IP). Any increase in building area, change in use to any higher intensity use, change in building location, or modification of the tentative parcel map lot lines and areas will require an amended review to evaluate consistency with the ALUCP compatibility criteria**,** at the discretion of the ALUC Director.

Supporting documentation was provided to the Airport Land Use Commission and is available online at www.rcaluc.org, click Agendas 1-9-25 Agenda, Bookmark Agenda Item No. 3.2.

If you have any questions, please contact me at (951) 955-6893.

Sincerely,
RIVERSIDE COUNTY AIRPORT LAND USE COMMISSION

NOTICE OF PUBLIC HEARING BEFORE THE BOARD OF SUPERVISORS OF RIVERSIDE COUNTY ON A GENERAL PLAN AMENDMENT, CHANGE OF ZONE, AND PLOT PLAN IN THE FIRST SUPERVISORIAL DISTRICT

NOTICE IS HEREBY GIVEN that a public hearing at which all interested persons will be heard, will be held before the Board of Supervisors of Riverside County, California, on the 1st Floor Board Chambers, County Administrative Center, 4080 Lemon Street, Riverside, on **Tuesday, August 26, 2025 at 10:00 A.M.** or as soon as possible thereafter, to consider the Planning Commission's recommendation to approve **General Plan Amendment No. 230008, Change of Zone No. 2300030, and Plot Plan No. 230048.** General Plan Amendment No. 230008 proposes to change the General Plan Foundation Component from Rural Community (RC) to Community Development (CD), and the General Plan land use designation from Very Low Density Residential (VLDR) to Business Park (BP). Change of Zone No. 2300030 proposes to change the zone from Rural Residential (R-R-1) to Industrial Park (I-P). Plot Plan No. 230048 proposes to construct a 185,912 square foot warehouse with 9,000 square feet of office space, including 23 loading dock doors, 126 parking spaces, and 33 truck trailer spaces on approximately 9.62 gross acres. APN(s): 317-260-017, 317-260-018. This proposed project is located: North of Water Ave., south of Placentia Ave., west of Harvill Ave., and east of Tobacco Rd. in the First Supervisorial District.

The Riverside County Planning Department recommends that the Board of Supervisors **TENTATIVELY APPROVE General Plan Amendment No. 230008, TENTATIVELY APPROVE Change of Zone No. 2300030, and APPROVE Plot Plan No. 230048.**

On June 25, 2025, the Planning Commission recommended approval of the project as stated to the Board of Supervisors on a vote of 4-0. The Planning Department meeting documents for the proposed project may be viewed online under the Planning Commission hearing date on the Public Hearing page of the Planning Department website: https://planning.rctlma.org/Public-Hearings.

FOR FURTHER INFORMATION REGARDING THIS PROJECT, PLEASE CONTACT KRISTA MASON, PROJECT PLANNER, AT (951) 955-1722 OR EMAIL KMASON@RIVCO.ORG.

Any person wishing to testify in support of or in opposition to the project may do so in writing between the date of this notice and the public hearing or may appear and be heard at the time and place noted above. All written comments received prior to the public hearing will be submitted to the Board of Supervisors and the Board of Supervisors will consider such comments, in addition to any oral testimony, before making a decision on the project.

If you challenge the above item in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence to the Planning Department or Board of Supervisors at, or prior to, the public hearing. Be advised that as a result of the public hearing and the consideration of all public comment, written and oral, the Board of Supervisors may amend, in whole or in part, the project and/or the related environmental document. Accordingly, the designations, development standards, design or improvements, or any properties or lands within the boundaries of the project, may be changed in a way other than specifically proposed.

Alternative formats available upon request to individuals with disabilities. If you require reasonable accommodation, please contact Clerk of the Board at (951) 955-1069.

Please send all written correspondence to: Clerk of the Board, 4080 Lemon Street, 1st Floor, Post Office Box 1147, Riverside, CA 92502-1147 or email cob@rivco.org

AVISO DE AUDIENCIA PÚBLICA ANTE LA JUNTA DE SUPERVISORES DEL CONDADO DE RIVERSIDE SOBRE UNA ENMIENDA AL PLAN GENERAL, CAMBIO DE ZONA Y PLANO DE PARCELA EN EL PRIMER DISTRITO DE SUPERVISIÓN

POR EL PRESENTE SE NOTIFICA que se llevará a cabo una audiencia pública en la que se escuchará a todas las personas interesadas, ante la Junta de Supervisores del Condado de Riverside, California, en la Sala de la Junta del 1.er piso, Centro Administrativo del Condado, 4080 Lemon Street, Riverside, **el martes 9 de septiembre de 2025 a las 10:00 a. m.** o lo antes posible después, para considerar la recomendación de la Comisión de Planificación de aprobar **Enmienda al Plan General No. 230008, Cambio de Zonificación No. 2300030 y Plano de Parcela No. 230048.** La Enmienda al Plan General No. 230008 propone cambiar el Componente de Cimentación del Plan General de Comunidad Rural (CR) a Desarrollo Comunitario (CD), y la designación del uso del suelo del Plan General de Residencial de Muy Baja Densidad (VLDR) a Parque Empresarial (BP). El Cambio de Zonificación No. 2300030 propone cambiar la zonificación de Residencial Rural (R-R-1) a Parque Industrial (I-P). El plano de parcela No. 230048 propone la construcción de un almacén de 185,912 pies cuadrados (17,600 m²) con 9,000 pies cuadrados (840 m²) de oficinas, que incluye 23 muelles de carga, 126 plazas de aparcamiento y 33 espacios para remolques de camiones, en aproximadamente 9.62 acres brutos. APN(s): 317-260-017, 317-260-018. Este proyecto se ubica al norte de Water Ave., al sur de Placentia Ave., al oeste de Harvill Ave. y al este de Tobacco Rd. en el Primer Distrito de Supervisión.

El Departamento de Planificación del Condado de Riverside recomienda que la Junta de Supervisores **ADOPTE** la Declaración Negativa Mitigada, **APRUEBE TENTATIVAMENTE** la Enmienda al Plan General No. 230008, **APRUEBE TENTATIVAMENTE** el Cambio de Zona No. 2300030 y **APRUEBE** el Plano de Parcela No. 230048.

El 25 de junio de 2025, la Comisión de Planificación recomendó la aprobación del proyecto, tal como se presentó a la Junta de Supervisores, por 4 votos a favor y 0 en contra. Los documentos de la reunión del Departamento de Planificación sobre el proyecto propuesto pueden consultarse en línea, en la página de Audiencias Públicas del sitio web https://planning.rctlma.org/Public-Hearings del Departamento de Planificación, con la fecha de la audiencia de la Comisión de Planificación.

PARA OBTENER MÁS INFORMACIÓN SOBRE ESTE PROYECTO, COMUNÍQUESE CON KRISTA MASON, PLANIFICADORA DEL PROYECTO, AL (951) 955-1722 O ENVÍE UN CORREO ELECTRÓNICO KMASON@RIVCO.ORG.

Cualquier persona que desee testificar a favor o en contra del proyecto podrá hacerlo por escrito entre la fecha de este aviso y la audiencia pública, o podrá comparecer y ser escuchada en la fecha y lugar indicados anteriormente. Todos los comentarios escritos recibidos antes de la audiencia pública se presentarán a la Junta de Supervisores, quien los considerará, además de cualquier testimonio oral, antes de tomar una decisión sobre el proyecto.

Si desafía el punto anterior ante el tribunal, podrá limitarse a plantear únicamente las cuestiones que usted u otra persona hayan planteado en la audiencia pública descrita en este aviso, o en correspondencia escrita dirigida al Departamento de Planificación o a la Junta de Supervisores durante la audiencia pública o con anterioridad a ella. Tenga en cuenta que, como resultado de la audiencia pública y de la consideración de todos los comentarios públicos, escritos y orales, la Junta de Supervisores podrá modificar, total o parcialmente, el proyecto o el documento ambiental correspondiente. En consecuencia, las designaciones, las normas de desarrollo, el diseño o las mejoras, o cualquier propiedad o terreno dentro de los límites del proyecto, podrán modificarse de forma distinta a la propuesta específica.

Formatos alternativos disponibles a solicitud para personas con discapacidad. Si necesita adaptaciones razonables, comuníquese con la secretaría de la Junta al (951) 955-1069.

Envíe toda la correspondencia escrita a: secretaría de la Junta, 4080 Lemon Street, 1er piso, apartado postal 1147, Riverside, CA 92502-1147 o envíe un correo electrónico a: cob@rivco.org.

NOTICE OF PUBLIC HEARING BEFORE THE BOARD OF SUPERVISORS OF RIVERSIDE COUNTY ON A GENERAL PLAN AMENDMENT, CHANGE OF ZONE, AND PLOT PLAN IN THE FIRST SUPERVISORIAL DISTRICT

NOTICE IS HEREBY GIVEN that a public hearing at which all interested persons will be heard, will be held before the Board of Supervisors of Riverside County, California, on the 1st Floor Board Chambers, County Administrative Center, 4080 Lemon Street, Riverside, on **Tuesday, August 26, 2025 at 10:00 A.M.** or as soon as possible thereafter, to consider the Planning Commission's recommendation to approve **General Plan Amendment No. 230008, Change of Zone No. 2300030, and Plot Plan No. 230048.** General Plan Amendment No. 230008 proposes to change the General Plan Foundation Component from Rural Community (RC) to Community Development (CD), and the General Plan land use designation from Very Low Density Residential (VLDR) to Business Park (BP). Change of Zone No. 2300030 proposes to change the zone from Rural Residential (R-R-1) to Industrial Park (I-P). Plot Plan No. 230048 proposes to construct a 185,912 square foot warehouse with 9,000 square feet of office space, including 23 loading dock doors, 126 parking spaces, and 33 truck trailer spaces on approximately 9.62 gross acres. APN(s): 317-260-017, 317-260-018. This proposed project is located: North of Water Ave., south of Placentia Ave., west of Harvill Ave., and east of Tobacco Rd.in the First Supervisorial District.

The Riverside County Planning Department recommends that the Board of Supervisors **TENTATIVELY APPROVE General Plan Amendment No. 230008, TENTATIVELY APPROVE Change of Zone No. 2300030, and APPROVE Plot Plan No. 230048.**

On June 25, 2025, the Planning Commission recommended approval of the project as stated to the Board of Supervisors on a vote of 4-0. The Planning Department meeting documents for the proposed project may be viewed online under the Planning Commission hearing date on the Public Hearing page of the Planning Department website: https://planning.rctlma.org/Public-Hearings.

FOR FURTHER INFORMATION REGARDING THIS PROJECT, PLEASE CONTACT KRISTA MASON, PROJECT PLANNER, AT (951) 955-1722 OR EMAIL KMASON@RIVCO.ORG.

Any person wishing to testify in support of or in opposition to the project may do so in writing between the date of this notice and the public hearing or may appear and be heard at the time and place noted above. All written comments received prior to the public hearing will be submitted to the Board of Supervisors and the Board of Supervisors will consider such comments, in addition to any oral testimony, before making a decision on the project.

If you challenge the above item in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence to the Planning Department or Board of Supervisors at, or prior to, the public hearing. Be advised that as a result of the public hearing and the consideration of all public comment, written and oral, the Board of Supervisors may amend, in whole or in part, the project and/or the related environmental document. Accordingly, the designations, development standards, design or improvements, or any properties or lands within the boundaries of the project, may be changed in a way other than specifically proposed.

Los documentos de la reunión del Departamento de Planificación sobre el proyecto propuesto pueden consultarse en línea, en la página de Audiencias Públicas del sitio web https://planning.rctlma.org/Public-Hearings del Departamento de Planificación, con la fecha de la audiencia de la Comisión de Planificación.

PARA OBTENER MÁS INFORMACIÓN SOBRE ESTE PROYECTO, COMUNÍQUESE CON KRISTA MASON, PLANIFICADORA DEL PROYECTO, AL (951) 955-1722 O ENVÍE UN CORREO ELECTRÓNICO KMASON@RIVCO.ORG.

Cualquier persona que desee testificar a favor o en contra del proyecto podrá hacerlo por escrito entre la fecha de este aviso y la audiencia pública, o podrá comparecer y ser escuchada en la fecha y lugar indicados anteriormente. Todos los comentarios escritos recibidos antes de la audiencia pública se presentarán a la Junta de Supervisores, quien los considerará, además de cualquier testimonio oral, antes de tomar una decisión sobre el proyecto.

Si desafía el punto anterior ante el tribunal, podrá limitarse a plantear únicamente las cuestiones que usted u otra persona hayan planteado en la audiencia pública descrita en este aviso, o en correspondencia escrita dirigida al Departamento de Planificación o a la Junta de Supervisores durante la audiencia pública o con anterioridad a ella. Tenga en cuenta que, como resultado de la audiencia pública y de la consideración de todos los comentarios públicos, escritos y orales, la Junta de Supervisores podrá modificar, total o parcialmente, el proyecto o el documento ambiental correspondiente. En consecuencia, las designaciones, las normas de desarrollo, el diseño o las mejoras, o cualquier propiedad o terreno dentro de los límites del proyecto, podrán modificarse de forma distinta a la propuesta específica.

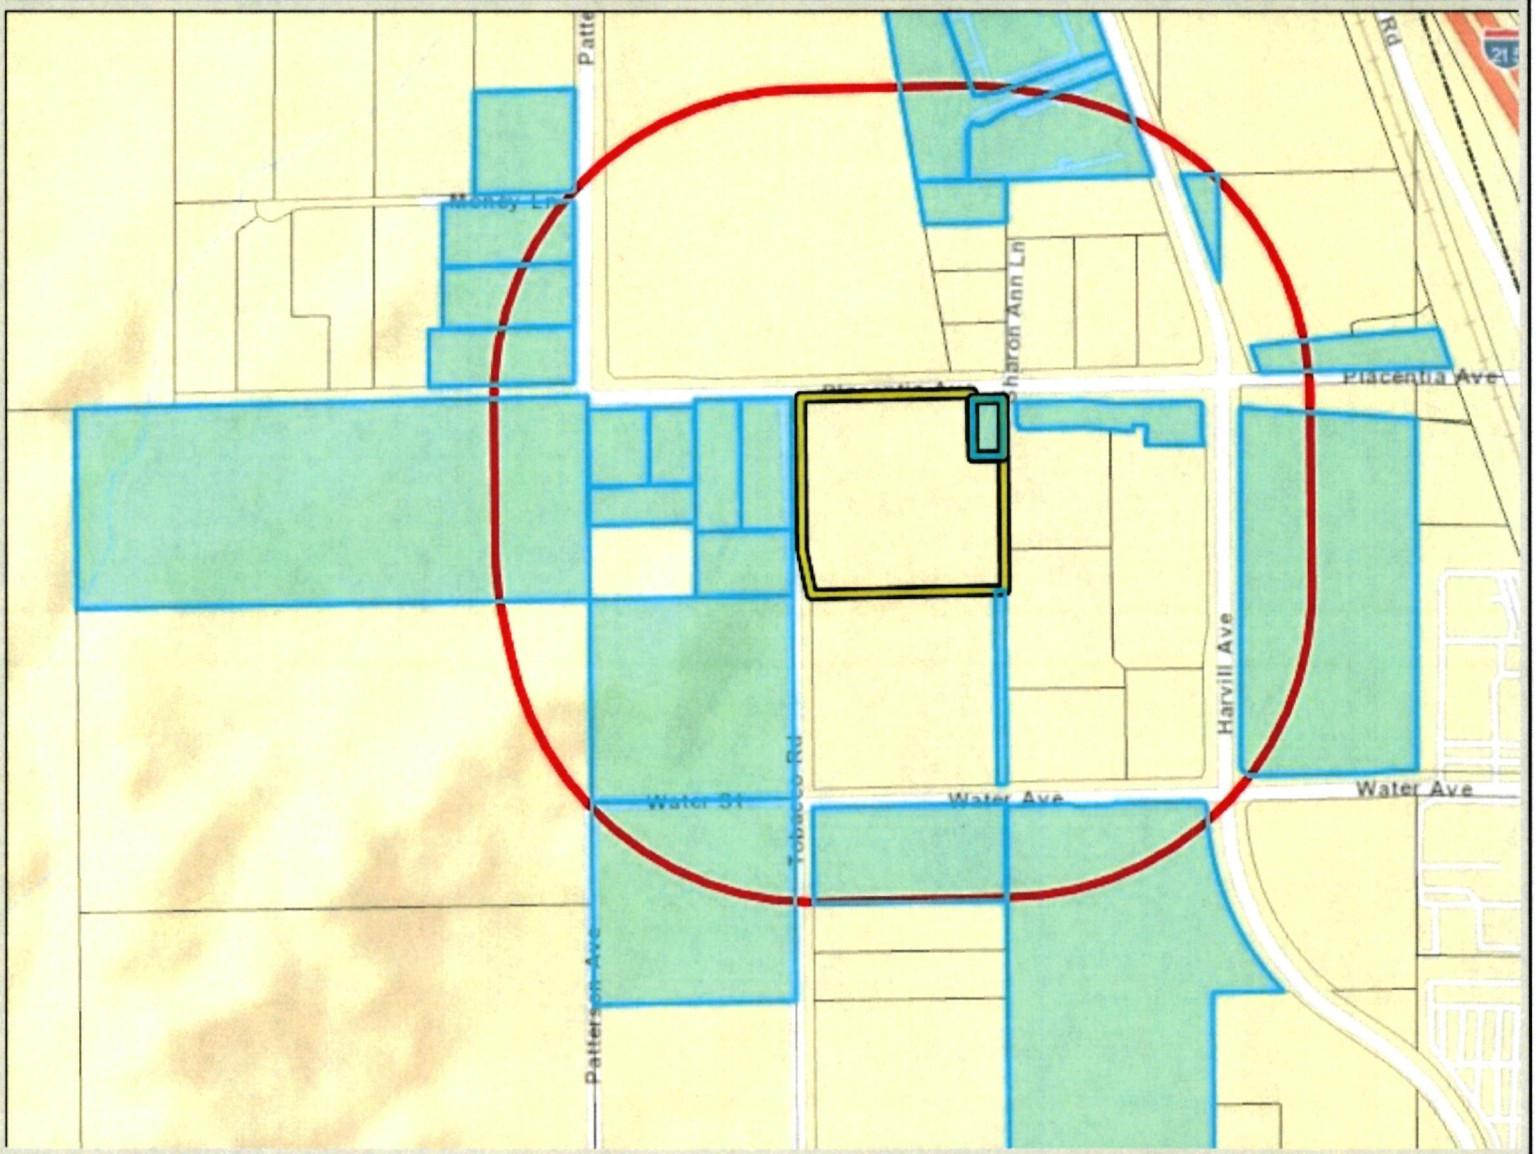
Formatos alternativos disponibles a solicitud para personas con discapacidad. Si necesita adaptaciones razonables, comuníquese con la secretaria de la Junta al (951) 955-1069.



Envíe toda la correspondencia escrita a: secretaria de la junta, 4080 Lemon Street, 1er piso, apartado postal 1147, Riverside, CA 92502-1147 o envíe un correo electrónico a: cob@rivco.org.

NOTICE OF PUBLIC HEARING BEFORE THE BOARD OF SUPERVISORS OF RIVERSIDE COUNTY ON A GENERAL PLAN AMENDMENT, CHANGE OF ZONE, AND PLOT PLAN IN THE FIRST SUPERVISORIAL DISTRICT

NOTICE IS HEREBY GIVEN that a public hearing at which all interested persons will be heard, will be held before the Board of Supervisors of Riverside County, California, on the 1st Floor Board Chambers, County Administrative Center, 4080 Lemon Street, Riverside, on **Tuesday, August 26, 2025 at 10:00 A.M.** or as soon as possible thereafter, to consider the Planning Commission's recommendation to approve **General Plan Amendment No. 230008, Change of Zone No. 2300030, and Plot Plan No. 230048.** General Plan Amendment No. 230008 proposes to change the General Plan Foundation Component from Rural Community (RC) to Community Development (CD), and the General Plan land use designation from Very Low Density Residential (VLDR) to Business Park (BP). Change of Zone No. 2300030 proposes to change the zone from Rural Residential (R-R-1) to Industrial Park (I-P). Plot Plan No. 230048 proposes to construct a 185,912 square foot warehouse with 9,000 square feet of office space, including 23 loading dock doors, 126 parking spaces, and 33 truck trailer spaces on approximately 9.62 gross acres. APN(s): 317-260-017, 317-260-018. This proposed project is located: North of Water Ave., south of Placentia Ave., west of Harvill Ave., and east of Tobacco Rd.in the First Supervisorial District.

The Riverside County Planning Department recommends that the Board of Supervisors **ADOPT Mitigated Negative Declaration, TENTATIVELY APPROVE General Plan Amendment No. 230008, TENTATIVELY APPROVE Change of Zone No. 2300030, and APPROVE Plot Plan No. 230048**.

On June 25, 2025, the Planning Commission recommended approval of the project as stated to the Board of Supervisors on a vote of 4-0. The Planning Department meeting documents for the proposed project may be viewed online under the Planning Commission hearing date on the Public Hearing page of the Planning Department website: https://planning.rctlma.org/Public-Hearings.

FOR FURTHER INFORMATION REGARDING THIS PROJECT, PLEASE CONTACT KRISTA MASON, PROJECT PLANNER, AT (951) 955-1722 OR EMAIL KMASON@RIVCO.ORG.

Any person wishing to testify in support of or in opposition to the project may do so in writing between the date of this notice and the public hearing or may appear and be heard at the time and place noted above. All written comments received prior to the public hearing will be submitted to the Board of Supervisors and the Board of Supervisors will consider such comments, in addition to any oral testimony, before making a decision on the project.

If you challenge the above item in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence to the Planning Department or Board of Supervisors at, or prior to, the public hearing. Be advised that as a result of the public hearing and the consideration of all public comment, written and oral, the Board of Supervisors may amend, in whole or in part, the project and/or the related environmental document. Accordingly, the designations, development standards, design or improvements, or any properties or lands within the boundaries of the project, may be changed in a way other than specifically proposed.

Alternative formats available upon request to individuals with disabilities. If you require reasonable accommodation, please contact Clerk of the Board at (951) 955-1069.

Please send all written correspondence to: Clerk of the Board, 4080 Lemon Street, 1st Floor, Post Office Box 1147, Riverside, CA 92502-1147 or email cob@rivco.org

AVISO DE AUDIENCIA PÚBLICA ANTE LA JUNTA DE SUPERVISORES DEL CONDADO DE RIVERSIDE SOBRE UNA ENMIENDA AL PLAN GENERAL, CAMBIO DE ZONA Y PLANO DE PARCELA EN EL PRIMER DISTRITO DE SUPERVISIÓN

POR EL PRESENTE SE NOTIFICA que se llevará a cabo una audiencia pública en la que se escuchará a todas las personas interesadas, ante la Junta de Supervisores del Condado de Riverside, California, en la Sala de la Junta del 1.er piso, Centro Administrativo del Condado, 4080 Lemon Street, Riverside, **el martes 9 de septiembre de 2025 a las 10:00 a. m.** o lo antes posible después, para considerar la recomendación de la Comisión de Planificación de aprobar **Enmienda al Plan General No. 230008, Cambio de Zonificación No. 2300030 y Plano de Parcela No. 230048**. La Enmienda al Plan General No. 230008 propone cambiar el Componente de Cimentación del Plan General de Comunidad Rural (CR) a Desarrollo Comunitario (CD), y la designación del uso del suelo del Plan General de Residencial de Muy Baja Densidad (VLDR) a Parque Empresarial (BP). El Cambio de Zonificación No. 2300030 propone cambiar la zonificación de Residencial Rural (R-R-1) a Parque Industrial (I-P). El plano de parcela No. 230048 propone la construcción de un almacén de 185,912 pies cuadrados (17,600 m²) con 9,000 pies cuadrados (840 m²) de oficinas, que incluye 23 muelles de carga, 126 plazas de aparcamiento y 33 espacios para remolques de camiones, en aproximadamente 9.62 acres brutos. APN(s): 317-260-017, 317-260-018. Este proyecto se ubica al norte de Water Ave., al sur de Placentia Ave., al oeste de Harvill Ave. y al este de Tobacco Rd. en el Primer Distrito de Supervisión.

El Departamento de Planificación del Condado de Riverside recomienda que la Junta de Supervisores **ADOPTE** la Declaración Negativa Mitigada, **APRUEBE TENTATIVAMENTE** la Enmienda al Plan General No. 230008, **APRUEBE TENTATIVAMENTE** el Cambio de Zona No. 2300030 y **APRUEBE** el Plano de Parcela No. 230048.

El 25 de junio de 2025, la Comisión de Planificación recomendó la aprobación del proyecto, tal como se presentó a la Junta de Supervisores, por 4 votos a favor y 0 en contra. Los documentos de la reunión del Departamento de Planificación sobre el proyecto propuesto pueden consultarse en línea, en la página de Audiencias Públicas del sitio web https://planning.rctlma.org/Public-Hearings del Departamento de Planificación, con la fecha de la audiencia de la Comisión de Planificación.

PARA OBTENER MÁS INFORMACIÓN SOBRE ESTE PROYECTO, COMUNÍQUESE CON KRISTA MASON, PLANIFICADORA DEL PROYECTO, AL (951) 955-1722 O ENVÍE UN CORREO ELECTRÓNICO KMASON@RIVCO.ORG.

Cualquier persona que desee testificar a favor o en contra del proyecto podrá hacerlo por escrito entre la fecha de este aviso y la audiencia pública, o podrá comparecer y ser escuchada en la fecha y lugar indicados anteriormente. Todos los comentarios escritos recibidos antes de la audiencia pública se presentarán a la Junta de Supervisores, quien los considerará, además de cualquier testimonio oral, antes de tomar una decisión sobre el proyecto.

Si desafía el punto anterior ante el tribunal, podrá limitarse a plantear únicamente las cuestiones que usted u otra persona hayan planteado en la audiencia pública descrita en este aviso, o en correspondencia escrita dirigida al Departamento de Planificación o a la Junta de Supervisores durante la audiencia pública o con anterioridad a ella. Tenga en cuenta que, como resultado de la audiencia pública y de la consideración de todos los comentarios públicos, escritos y orales, la Junta de Supervisores podrá modificar, total o parcialmente, el proyecto o el documento ambiental correspondiente. En consecuencia, las designaciones, las normas de desarrollo, el diseño o las mejoras, o cualquier propiedad o terreno dentro de los límites del proyecto, podrán modificarse de forma distinta a la propuesta específica.

Formatos alternativos disponibles a solicitud para personas con discapacidad. Si necesita adaptaciones razonables, comuníquese con la secretaria de la Junta al (951) 955-1069.

Envíe toda la correspondencia escrita a: secretaria de la junta, 4080 Lemon Street, 1er piso, apartado postal 1147, Riverside, CA 92502-1147 o envíe un correo electrónico a: cob@rivco.org.

The Rural Association of Mead Valley is adamantly opposed to GPA 230008, Plot Plan (PPT) No. 230048 and zone changes 230030 that proposes to construct an 185,912 square foot (SF) concrete tilt-up warehouse. RAMV was not notified of this hearing even though they sent in letters to the Planning Commission opposing this Project and are an interested party.

The Project will be directly next to the $580 million Mead Valley Wellness Center. The substantial impacts to this facility and people using this facility have not been analyzed in the MND. This facility is clearly a sensitive receptor where hundreds of County employees will be working and thousands of people with compromised health will be living at this facility. https://ruhealth.org/mead-valley-wellness-village.

This Project must be denied.

Please include the attached letter into the Public Record.

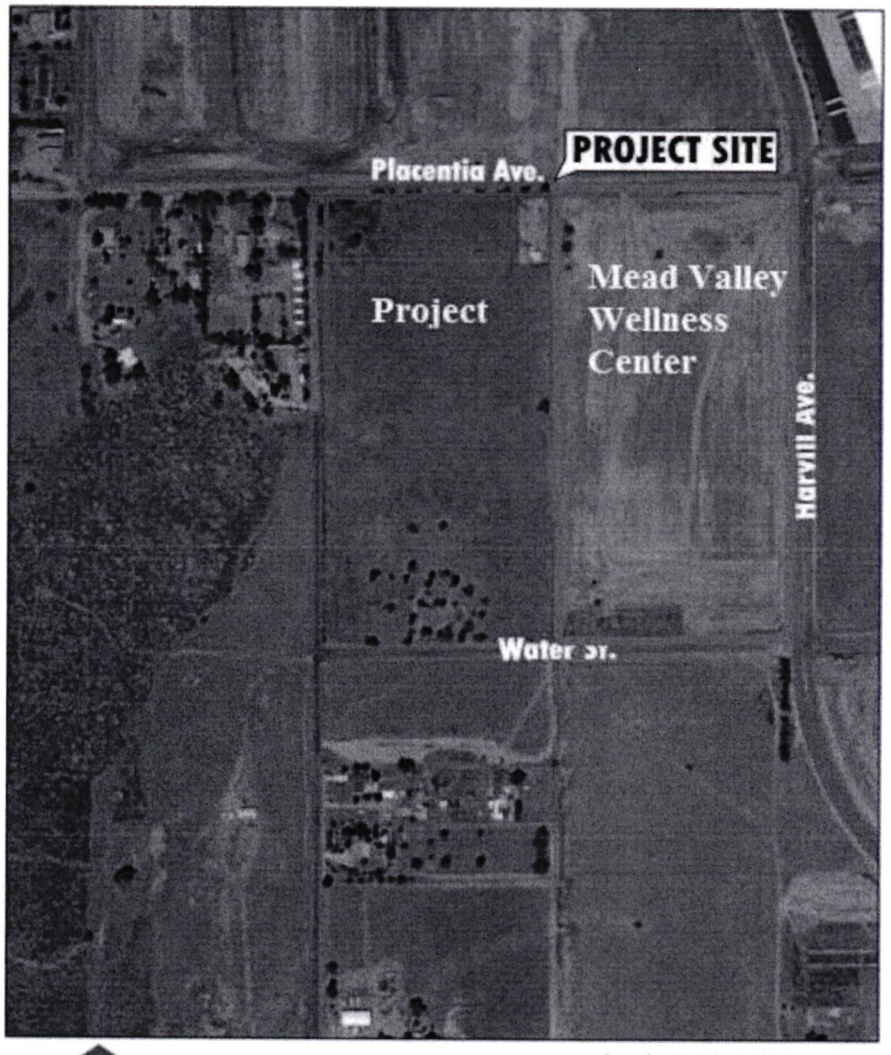
Item 23.1 Thrifty Oil Warehouse Project



GENERAL PLAN AMENDMENT NO. 230008 (GPA230008), CHANGE OF ZONE NO. 2300030 (CZ2300030), and PLOT PLAN NO. 230048 (PPT230048)

The Rural Association of Mead Valley is adamantly opposed to GPA 230008, Plot Plan (PPT) No. 230048 and zone changes 230030 that proposes to construct an 185,912 square foot (SF) concrete tilt-up warehouse. RAMV was not notified of this hearing even though they sent in letters to the Planning Commission opposing this Project and are an interested party.

Thrifty Oil Co (Applicant) proposes to construct one 185,912 square foot (SF) concrete tilt-up, warehouse on a 9.62-acres on the southeast corner of Placentia Avenue and Tobacco Road.

The Proposed Project is anticipated to generate a total of 322 two-way trips per day onto Placentia Ave.

The Project will be directly next to the $580 million Mead Valley Wellness Center. The substantial impacts to this facility and people using this facility have not been analyzed in the MND. This facility is clearly a sensitive receptor where hundreds of County employees will be working and thousands of people with compromised health will be living at this facility. https://ruhealth.org/mead-valley-wellness-village.

PROJECT SITE-AERIAL VIEW
Thrifty Oil Speculative Warehouse
23641 Placentia Avenue
Riverside County, California
FIGURE 2

"The Mead Valley Wellness Village will offer outpatient and residential services for behavioral health and substance use disorders, primary healthcare, and behavioral health urgent care. The facility will serve children, youth, families, veterans, and others, and will be home to the first behavioral health urgent care in Riverside County for children under 13".

"Located at the intersection of Placentia Street and Harvill Avenue. The campus will incorporate beautiful landscaping, walking trails, and functional green spaces that are visually pleasing and beneficial to individuals in recovery."

The Wellness Village will include parks, recreation areas, gardens, rest areas, and trails for community members utilizing our services.

The Wellness Village will provide primary health care, children and youth services, and mental health and substance use disorder services. An on-campus pharmacy will be open to the public.

The Wellness Village will provide a market and café open to the community.

Thrifty Oil Warehouse Project Mobile Source Health Risk Assessment MND does not include the substantial health impacts to the Mead Valley Wellness Center directly adjacent to the Proposed Project. The dock doors are facing the Mead Valley Wellness Center.

TABLE 2-4: DPM EMISSIONS FROM PROJECT TRUCKS (2026 ANALYSIS YEAR)

Truck Emission Rates						
Source		VMT [a] (miles/day)	Truck Emission Rate [b] (grams/mile)	Truck Emission Rate [b] (grams/idle-hour)	Daily Truck Emissions [c] (grams/day)	Modeled Emission Rates (g/second)
Idling - Loading Docks	57			0.0885	1.26	1.460E-05
Idling - Truck Trailer Parking	57			0.0885	1.26	1.460E-05
Onsite North	114	10.28	0.0210		0.22	2.501E-06
Onsite South	114	20.29	0.0210		0.43	4.935E-06
Off-Site Travel - Placentia 50%	57	8.60	0.0090		0.08	8.945E-07
Off-Site Travel - Tobacco 50%	57	21.31	0.0090		0.19	2.217E-06
Off-Site Travel - Placentia Avenue 100%	114	54.19	0.0090		0.49	5.640E-06

[a] Vehicle miles traveled are for modeled truck route only.

[b] Emission rates determined using EMFAC 2021. Idle emission rates are expressed in grams per idle hour rather than grams per mile.

[c] This column includes the total truck travel and truck idle emissions. For idle emissions this column includes emissions based on the assumption that each truck idles for 15 minutes.

Thrifty Oil Warehouse Project Mobile Source Health Risk Assessment page 18.

OPERATIONAL IMPACTS

Residential Exposure Scenario:

The residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 which is located approximately 90 feet west of the Project site at an existing residence located at 23551 Placentia Avenue. Since there are no private outdoor living areas (backyards) facing the Project site, R2 is placed at the building façade. At the MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 1.18 in one million, which is less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0. Although Location R2 is not the nearest receptor to the Project site, it is the location that would experience the highest concentrations of DPM during project operation due to meteorological conditions (wind speed and direction) in the vicinity of the Project site. All other receptors would experience lower concentrations of DPM and thus less risk during operation of the proposed Project than the MEIR identified herein. As such, the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project operational activity. All other receptors would experience less risk than what is identified for this location.

Thrifty Oil Warehouse Project Mobile Source Health Risk Assessment page 23.

GPA 230007 conflicts with the General Plan Vision

II. THE GENERAL PLAN AMENDMENT AND ZONE CHANGE SHOULD BE DENIED WHERE IT WILL RESULT IN SIGNIFICANT ENVIRONMENTAL IMPACTS, INCLUDING SIGNIFICANT HEALTH RISKS FROM DEVELOPING DISTRIBUTION WAREHOUSES ADJACENT TO RESIDENTIAL USES.

The Mead Valley Wellness Center includes primary and specialty medical care, dental services, substance use disorder services, and a pharmacy, as well as onsite respite for families whose children are in short-term residential care.

- A recovery center featuring an adult and youth behavioral health urgent care, sobering center, crisis residential treatment and a residential substance use disorder treatment and detox program.
- A residential complex that will include supportive housing, recovery residences and residential behavioral health programs.
- Restorative care programs such as an adult residential facility and mental health rehabilitation center.

There are a large number of empty warehouses in Mead Valley within the Industrial corridor.

This Foundation General Plan Amendment (GPA) is a proposal to change the General Plan Foundation Component and Land Use designation from Rural Community-Very Low-density Residential (RC-VLDR) to Community Development – Business Park (CD-BP).

There is no justification or findings to change the land use and zoning from residential agriculture to industrial. This project is next to the Mott Rimrock Reserve with hundreds of sensitive and endangered animals and plants. The 24-7 noise, lighting and pollution will endanger this habitat.

This Project is part of the overall piecemealing of over 1200 acres outside of the Mead Valley Industrial Corridor where zoning changes are being proposed through the Foundation GPA process from residential agricultural to Industrial land uses.

• This proposed warehouse is part of 1200 acres of proposed warehouses outside of the Mead Valley Industrial Corridor.

COUNTY OF RIVERSIDE
ENVIRONMENTAL ASSESSMENT FORM: INITIAL STUDY

Project Case Type (s) and Number(s): General Plan Amendment No. 230008 (GPA230008) - Change of Zone No. 2300030 (CZ2300030); Plot Plan No. 230048 (PPT230048)
Lead Agency Name: County of Riverside Planning Department
Address: 4080 Lemon Street 12th Floor, Riverside, CA 92501
Contact Person: Krista Mason, Project Planner
Telephone Number: 951-955-6060
Applicant's Name: Stephane Wandel on behalf of Thrifty Oil Co.
Applicant's Address: 13116 Imperial Highway, Santa Fe Springs, CA 90670

I. PROJECT INFORMATION

Thrifty Oil Co (Applicant) proposes to construct one 185,912 square foot (SF) concrete tilt-up, non-refrigerated warehouse on an 9.62-acres (gross) / 8.68-acres (net) of vacant land designated as APN 317-260-017 and 317-260-018 on the southeast corner of Placentia Avenue and Tobacco Road in the unincorporated Mead Valley area of Riverside County, approximately 7 miles west of the City of Perris (Proposed Project, Figure 1 - *Regional Vicinity*; Figure 2 - *Project Site - Aerial View*; Figure 3 - *Project Site USGS View*). The Proposed Project is designed to house one or more tenant(s), which have not been designated at this time, and will include one 176,912 SF warehouse with 9 bays, two grade level doors, 23 dock high doors and two, 4,500 SF office spaces with mezzanines for a total square footage of 185,912, with related site landscaping, drainage basin, and parking. The building would be designed to incorporate standards of a 21st Century Warehouse as enacted by AB 98[1] (effective January 1, 2026) and identified in Chapter 2.8 (commencing with Section 65098) added to Division 1 of Title 7 of the Government Code. These would include at a minimum) cool roofing, medium- and heavy-duty vehicle charging readiness, light-duty electric vehicle charging readiness and installed charging stations, skylights in at least one percent of the roof area, or equivalent LED efficient lighting, classes of forklifts used on site, to be zero-emission by January 1, 2028, to the extent operationally feasible, and equipment used on site utilizing small off-road engines to be zero-emission, to the extent operationally feasible, commercially off-the shelf available, and adequate power available on site.

The Project also includes dedication of approximately 0.943 acres for public right of way improvements to be built along Tobacco Road and Placentia Avenue as a part of the Proposed Project, as well as off-site utility improvements.

The Project will also include onsite and offsite infrastructure improvements as required by the County of Riverside.

Concurrent Entitlements:

The Project requires the following approvals:

- General Plan Amendment No. 230008 (GPA 230008) proposal to change the land use from Rural Community-Very Low Density Residential (RC-VLDR) to Community Development- Business Park (BP).
- Change of Zone No. 230030 (CZ2300030) proposal to change the zone from Rural Residential one-acre minimum lot size (R-R-1) to Industrial Park (I-P).

[1] https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202320240AB98

E. **Brief description of the existing environmental setting of the project site and its surroundings:** The Project Site is relatively flat, with elevations that range from approximately 1,560 to 1,530 feet above mean sea level, sloping in an easterly gradient. Figure 9 – *Project Site Zoning* identifies the Site and zoning and the surrounding zoning. Parcel 317-260-018 at the northeast corner of the overall site which will be merged with parcel 317-260-17 contains a modular structure, trailer, and small storage building that will be removed as part of the Project proposal.

- **North:** Placentia Avenue, an approximately 21-foot-wide paved road, lies along the northern Project Site boundary. The Project Site abuts a 699,630 s.f, industrial warehouse recently constructed by Barker Logistics, LLC on the north side across Placentia Avenue, zoned Industrial Park (I-P).

- **South:** The Project Site abuts vacant property along the south side that is zoned Industrial Park (I-P). This property is owned by the same applicant who has land use entitlements develop a similar facility on this parcel APN: 317-260-015 and 317-260-16.

- **West:** Tobacco Road, an approximately 26-foot-wide paved road, lies along the western Project Site Boundary. Zoning immediately west of Tobacco Road is rural residential (R-R-1) and is occupied by single family residences.

- **East:** The Project Site abuts vacant property along the east side that is zoned Manufacturing, Service Commercial (M-SC). This parcel is owned by the County of Riverside.

The MND linked to this meeting today is the Initial study. This Project has not performed the required CEQA analysis. The MND does not include the adjacent Mead Valley Wellness Center where hundreds of residents and patients will be living and receiving care.

This Project must be denied. If it does move forward a EIR is required.

Sincerely,

Debbie Walsh

President, RAMV
